JANUARY 1914

AMONG THE OREGON FOOTHILLS

HERD REGISTER: Bulls. Nos. 26241 to 26560; Cows, Nos. 46521 to 46680; A. R

This Equipment Should be in Your Barn

It represents the successful work of America's foremost barn specialist, with the help of a large corps of expert draughtsmen and mechanics. It represents ideas fundamentally right—developed, enlarged and improved until practical perfection has been realized.

In the development of the JAMES Sanitary Barn Equipment we have taken efficiency *seriously*—knowing that it measures the dairyman's profit possibilities just as surely as soil, rain and sunshine measure the farmers, chances for crops.

Being *ready* for his work is all-important with the dairyman, as it is in any business or profession. *You* will be *ready* in a way that will both satisfy your ambition and meet your actual needs – when your dairy barn bears the *service* guarantee of

JAMES

If you expect to have the best modern, sanitary barn, you need the *free advice* of our Mr. James—yours for the asking if you give us your ideas, tell us how many cows you own, and indicate whether you intend to remodel or build. This free service places you under no obligation. We have helped hundreds of successful dairymen—we want to help *you*.

James Mfg. Co.,
A. Q. 1 Cane Street,
Ft. Atkinson, Wis.
Please send me your Barn Building Book—Free. Here are my answers to questions.
How many milch cows _____
Do you intend to build a barn ? _____
Remodel _____ When _____
Will you probably buy stalls, stanchions, pens _____
Manure or feed carriers? _____

_____ R. F. D. _____

The coupon below will bring you also a valuable Barn Building Book Get your free copy, *now*—even if you are not ready to begin work. Make your plans at once, anyhow, and get started as soon as you can.

Write Today For Free Catalogs

No 10. describes JAMES Stalls Stanchions, Pens, etc. Shows how all cows are lined up evenly over the gutter—how cows are prevented from nosing feed out of manger, or stealing one another's feed—how abortions, ruined udders, etc., are prevented. Also No. 11—describing JAMES Manure Carriers and Feed Carriers. *Write today.*

HELENDALE FARMS

Athens - Wisconsin - Portage

Office, 700 Cedar Street, Milwaukee

Give us the Guernsey Cow for profitable dairying and there are none handsomer.

For building up a dairy herd from common stock, there is none to compare with the Guernsey sire.

The new list of young bulls, 8 months to 2 years old of the famous Yeksa and Materna families, recently issued by Helendale Farms, has met with so much approval, and is so nearly disposed of, that a supplementary list has been added, this giving a few more opportunities to secure a well bred sire at reasonable prices.

They are tuberculin tested and guaranteed. They will be disposed of in the order in which acceptances are received.

List on application to above address.

Katonah's Wood Farm

HERD BULL

Imp. Sequel's Monogram 15649

Sire of Clara's Sequel, First Prize on Guernsey 1910, and 1911 France XXVIII first prize Cow in 1911, also of Gay Boy 3d first prize 1913.

We are offering Katonah's Climax 25618

Sired by Imp. Sequel's Monogram and out of Katonah's Nancy 27314 who qualified for the Advanced Register with a good margin under ordinary herd care. Price of Katonah's Climax, **$100.00**

Katonah, N. Y.

MAPLE FARM OF MIDLOTHIAN

STANDS for the HIGHEST TYPE of ANIMALS that can be PRODUCED

Winners at the Pail and in the Ring.

CORRECT TYPE: Demonstrated by their work at the National Dairy Show, the great Round Up, for the last two years where they have been shown in a small but select herd and have invariably made most creditable winnings.

ABILITY TO PERFORM: Proven by the fact that one-half the milking herd are in the Advanced Register with records that

Average	Required
10,514.5 lbs. milk	8,630 lbs. milk
526.12 lbs. fat	320.9 lbs. fat

The phrase "OF MIDLOTHIAN" in a calf's name means that the quality is right from all standpoints. Get a calf bearing the "stamp of approval" to head your herd.

If you can't come to pick out your own bull write to

Maple Farm of Midlothian

CHARLES D. ETTINGER, Proprietor

WALTER A. COOK, Manager **Box 114, Tinley Park, Illinois**

"Blood Will Tell"

The foundation of our herd is strong in the blood of the two great bulls, *Imp. May Rose King* 8336, and *Imp. King of the May* 9001, the only bulls of the breed each the sire of more than two daughters with fat records over 600 pounds and a son in turn with two 600 pound daughters.

Don Diavolo of Linda Vista 23565
at 12 months.

His sire is a double grandson of *Imp. King of the May* and his dam is by *Imp. May Rose King* out of a daughter of *Imp. Golden Secret,* thus combining the blood of the two greatest sires with that of the three greatest dams:

Dolly Bloom 12770 Imp. Itchen Daisy III 15630

Imp. Hayes Rosie 15476

The only three cows of the breed each with a record of over 700 pounds of fat and each the dam of a daughter over 700 pounds and a son the sire of a daughter over 700 pounds.

Grandam, Dolly Bloom 12770, has the following records: 8841.58 lbs. milk; 453.86 lbs. fat at 1 yr. 11 mos. 12674.83 lbs. milk; 623.94 lbs. fat at 3 yrs. 5 mos. 17297.56 lbs. milk; 836.21 lbs. fat at 5 yrs. 10 mos.

Are Producers

Langwater Advocate, the bull that is being used as an out-cross on the May Rose blood. This young bull, who is half brother to the great cow, Dolly Dimple, carries the blood of the highest producers of the breed, as well as that of the greatest show ring winners of the breed, beside being a show-ring winner himself. In 1912 he won first as senior bull calf and Reserve Champion at Framingham, Brockton and National Dairy Show, his sire being Grand Champion in each of the above shows. In 1913, he was first prize yearling and Reserve Champion at the great Framingham Show. Langwater Advocate is the only bull of the breed that has the distinction of having his dam, grand-dam, and great grand-dam with records of over 630 pounds of butter-fat. The average butter-fat production of these three is 727.72 pounds, unequalled in the pedigree of any other Guernsey bull.

In Langwater Advocate are embodied all the qualities that are necessary to enable him to perpetuate the great work of a noted ancestry. For information address,

Volume V.

Our new volume. This issue opens Volume V of The Guernsey Breeders' Journal.

By this time our readers are thoroughly familiar with the scope and purpose of the publication. We realize that while the Journal has been perfected along the lines of being a complete index of the work of the Register and Advanced Register divisions, we have yet much opportunity to improve along the line of gathering news and information regarding the breed.

The above is especially true in short interesting notes regarding individual animals and of herds in general. We urge the co-operation of the breeders in sending same, so we can have several pages of such in each issue. Let everyone co-operate in helping make the Journal for 1914 better than ever.

The addition of so many pages to each new issue may necessitate the making of two volumes a year instead of one, and if so, our Volumes, hereafter, will close with the June and December issues.

Guernsey Breeders' Meetings.

The annual meeting of the Western Guernsey Breeders' Association is to be held at Madison, Wisconsin, Friday, Feb. 6, 1914. This association always has a large and enthusiastic gathering and it is hoped this year will see no change in this respect.

The Connecticut State Dairyman's Association this year holds its meeting at Hartford, January 20-21. This year it is planned to have a special Guernsey year. The Association has adopted a plan of putting specially forward the characteristics of some breed each year, and this year promises to make an interesting Guernsey meeting of it. The program will be especially arranged to this effect.

The Michigan Guernsey Breeders' Association will meet at Lansing on January 14th.

Growth of the Advanced Register.

We have repeatedly called the attention of the breeders to the continued growth of the work of the Guernsey Club's office. It will be of interest to note that at the close of this year we find 1026 cows representing 169 breeders at work in the Advanced Register, and this puts this division well over the thousand mark. The latest summary of the Advanced Register records which we have, shows the following:

798 Cows in Class A average 9717.43 lbs. milk; 481.58 lbs. butter fat. Av. % Butter Fat, 4.955.

130 Cows in Class B average 9366.75 lbs. milk; 468.42 lbs. butter fat. Av. % Butter Fat, 5.000.

223 Cows in Class C average 8795.21 lbs. milk; 444.20 lbs. butter fat. Av. % Butter Fat 5.050.

205 Cows in Class D average 8556.77 lbs. milk; 432.32 lbs. butter fat. Av. % Butter Fat 5.052.

279 Cows in Class E average 7997.93 lbs. milk; 407.20 lbs. butter fat. Av. % Butter Fat, 5.091.

348 Cows in Class F average 7660.21 lbs. milk; 391.44 lbs. butter fat. Av. % Butter Fat, 5.110.

715 Cows in Class G, average 7409.89 lbs. milk; 366.44 lbs. butter fat. Av. % butter fat, 4.945.

2698 Cows average 8481.43 lbs. milk; 424.28 lbs. butter fat. Av. % butter fat, 5.002.

Loss by Fire.

Just as the last form goes to press, we learn of the loss by fire of Mr. H. H. Pearson Jr.'s barn at Claiborne, Md.

The building caught fire just after the morning milking on the 14th and was completely destroyed. All stock was saved, without any injury. The Experiment Station Supervisor, who was at Rich Neck conducting his regular monthly test at the time, suggested that the test be discontinued, but at Mr. Pearson's request went right on, with only a slight delay at the noon milking, none being missed. It is quite remarkable that no cow under test dropped then or later two pounds in milk production. This is eloquent proof of the care taken of the cows at such a time by the men in charge and also of the fine dairy temperament of the cows. It is also interesting to note how slight were the variations in butter-fat tests compared with the same milkings on the previous day.

We are very sorry to learn of the loss of the buildings just at the winter season. That none of the valuable cows were injured is much to be thankful for.—B.

MIXTER FARMS. The Home of Three Hundred Guernseys.

One of the Large Barns on Mixter Farms.

A THREE hour train ride and a three mile drive from Boston brings one to the little New England hamlet of Hardwick, Massachusetts, surrounding which lies the George Mixter estate, the home of one of the largest Guernsey herds in the country. This estate comprises one thousand three hundred acres of beautiful hills and valleys which in the nineteen years since their purchase have been developed in to a fertile farming county. The valleys produce hay and silage, enough to keep the 330 head of stock, the year round, and on the hills are found many thrifty peach orchards besides the natural trees, which add greatly to the utility and beauty of the estate. The main buildings center around the village of Hardwick, and are about twenty five in number. The three large cow barns are of wooden construction and though not of the most modern architecture are well equipped with sanitary outfits for the production of good clean milk and healthy live stock.

The Mandel barn, so named from the orginal owner, lies about a mile east of the dairy which is the central building. It has lately been moved and reconstructed and now will accomodate their sixty head of young stock very comfortably.

The Page barn also named from the original owner is the largest building and lies west of the dairy. It accomodates about one hundred head of cows, including the many cows that are kept on official test. The rest of the milking herd together with the herd bulk are kept in the Trow barn a short distance east of the dairy.

The milk from the Trow and Page barns is brought to the dairy as soon as milked, and coming in on the third floor is run immediately over a cooler down in to the bottling and separating room on the second floor. The night's milk is bottled and put into individual cases with address tags already on them, iced and placed in the refrigerator for delivery in the morning. The morning's milk is separated and a sixty percent cream put into pint bottles. The milk and cream is then shipped to Boston where it is distributed to a fancy trade by Moore and Company, a trucking contractor firm, who lately have found it profitable to give especial attention to the distribution of the Mixter farm product and have provided suitable wagons for this purpose. On the second floor of the dairy, but separated by concrete walls from the bottling room, is the washing and sterilizing room, and on the first floor, separated from the rest of the building by a concrete ceiling, is the boiler room. This three story concrete structure is modern in its appearance, making quite a contrast to the other old fashioned dwellings in the village, and is thoroughly equipped with every device for sanitary and economical milk production.

Breeding operations were started something over fifteen years ago by George Mixter, a successful business man of Boston, Massachusetts, and since his death have been carried on by his brother, Dr. S. J. Mixter also of Boston. The first animals were purchased from Francis Show's herd at Muster Hill Farm, New Braintree, Massachusets, and other foundation cows came from the herds of James B. Case, of Wayland and H. H. Fay of Wood's Hole, Massachusetts. The first herd bull used was Lord Hardwick 3910 sired by Golden Knight 3405 and out of Select of Wayland 6232. He sired only two registered sons and five registered daughters. One of his sons was Lord Hardwick 2d, born July 1896 out of Dairy Queen 2d of Falmouth 3595, who was used until his death in 1907 and sired a large number of cows now in the herd. His daughters that are now being tested are Fairy Elsie 19713, 303.24 pounds of butter fat in 257 days; Garter 18804, 285.03 pounds of butter fat in 262 days; Glendalia 26182, 299.76 pounds of butter fat in 293 days; Lady Anne of Hardwick

26492, 336.28 pounds of butter fat in 273 days; Queenie of Hardwick 2d, 24436 275.35 pounds of butter fat in 189 days; Thirty Thousand Six Hundred Twenty Six 447.94, pounds of butter fat in 338 days. A son of Lord Hardwich 2nd, Miss Elsie's Lord Hardwick 11311, was also used for a number of years and sired a large number of cows, two of which are now on test, number Thirty Thousand Six Hundred Fifty making over 50 pounds of fat a month and Thirty Thousand Six Hundrey Fifty Seven made 46.25 pounds of butter fat in May.

These three bulls were of a large rugged type showing an abundance of constitution and vigor, and have produced on their offspring the same characteristics with not too much refinement, though enough for show ring purposes. As an instance of the breeding quality of the Hardwick type of cow we may look a moment at the cow Gelenina 18252, sired by Lord Hardwick 2d. 5981 who is now 14 years old, still paying a good profit in milk, and has produced nine heifer calves the first of whom Gemina 20650 born in 1902, was dam of eight progeny six of which were heifers. Gelenina's second calf Glassie 20659 appeared in 1903 and at ten years of age made an official record of 8408.70 pounds of milk and 427.87 pounds of fat. She in turn was the dam of four progeny, two bulls and two heifers. The third calf was Geletea 26178 born Feb. 5, 1904, who was sold and no record kept of her progeny. The fourth calf Picotte's Gelenina 26411 came the following year and is now under test. She is the dam of three heifers all in the herd, and one bull. The fifth calf, Thirty Thousand Six Fifty Nine 30659 appeared early in 1907 and produced two living calves both bulls. The sixth daughter Thirty Thousand Eight Hundred Ten 30810 was born in 1908 and sold to T. E. Hyde, of Bloomsburg, Pa., and is the dam of two heifer calves. The seventh daughter Chief's Gelenina of Mixter Farm 44019 freshened about a year ago and will be tested when she freshens again. The eighth and ninth calves were born in 1911 and 1913 and neither have as yet been registered. The 1913 calf was sired by Yeoman's King of the May 17053

Thirty Thousand Six Hundred Sixty 30660

Sire Prince of Groton 9841. Dam Gemina 20650.

On this type of cows the blood of May Rose is now being used, in the animals Langwater Demonstrator 16451 purchased in December 1910, and Yeoman's King of the May 17053 purchased in June 1912. A son of Yeoman's King of the May 17053, Dean of the May 21815 born March 8, 1912, out of Sultan's Bonny 25396 A. R. 1147 who has a record of 11,038.80 pounds of milk and 478.98 pounds of fat as a two year old, is a wonderfully smooth and likely looking animal and is now being used on a few of the heifers.

Thirty Thousand Six Hundred Eighty 30680

Sire Prince of Groton 9841 Dam Nobska Prophetess 15760

Langwater Demonstrator 16451 was born October 30, 1909 and purchased by Mixter Farms at the age of fourteen months. He was sired by Dolly Dimples May King of Langwater 12997 out of Imp. Hayes Felois 2d. 15478 A. R. 423 with a record of 7267.83 pounds of milk and 384.15 pounds of fat as a three year old. He has sired thirty five very promising females but none as yet have come into milk.

Yeoman's King of the May 17053 born April 4, 1910 was purchased at two years of age from Charles H. Jones,of Wellesley Farms, Massachusetts. He was sired by the well known bull Yeoman 8618 and out of Florham Daisy 18115 A. R. 792 who made as a three year old 9263.00 pounds of milk and 490.22 pounds of fat, and in a retest at five years and ten months of age made 14.876.60 pounds of milk and 747.08 pounds of fat.

The above bulls are assisted by King William of Maple Ranch 14087 and Equality of the Glen 13688. King William of Maple Ranch 14087 was sired by

Langwater Demonstrator 16451
Sire Dolly Dimple's May King of Langwater
Dam Imp. Hayes Felois 2d 15478

Dean of the May 21815
Sire Yeoman's King of the May 17053
Dam Sultan's Bonny 25396

Yeoman's King of the May 17053
Sire Imp. Yeoman 8618
Dam Florham Daisy 18115

Islesboro 7733, who has three daughters in the Advanced Register with records of 577.46, 400.07 and 317.50 pounds of butter fat. He is out of a daughter of Islesboro 7733 namely Belle of Maple Ranch 18057 A. R. 685 with two records, one made as a two year old of 9422.96 pounds of milk and 506.40 pounds of fat and the other made at five years ofage of 11291.80 pounds of milk and 577.46 pounds of fat. The other bull Equality of the Glen 13688 was out of Edith of the Glen 21202 and was sired by Jewel's Independence 10324 who now has eight daughters in the Adv. Register with the following records 491.87, 695.73, 556.25, 548.57 527.77, 585.46, 449.75, and 415.48 pounds of fat respectively, the majority of which were made at two and one half years of age. With this working group of five sires and over three hundred dams all bred on the place a wonderful oportunity is given to develop some fine young stock, both bulls and heifers, and some choice animals are being produced.

In order to show that their cows were producers and to find out where improvement in the production of the herd could best be made, official testing was taken up in 1912 but since the milk had to be produced on an economical basis all records have been and are being made with ordinary herd care the cows running out to pasture in the summer and milked only twice a day the year round. In spite of this fact some notable records have been made and the following animals placed in the Advanced Register.

	milk	Av.%	B. Fat
Picotte's Select 30009, A. R. 2070	10668.90	5.33	568.78
Grassland 18803, A. R. 2071	10431.30	5.20	542.28
Glamour 20921, A. R. 2003	10193.00	4.99	508.79
Picotty 26407, A. R. 2126	11007.00	4.55	500.90
Princess Fay of Hardwick 26495, A. R. 2005	10030.50	4.96	497.10
Hardwick's Long Queenie 20658, A. R. 2125	10327.20	4.73	488.27
Bettie of Hardwick 2d. 22143, A. R. 2002	8592.70	5.40	463.86
Sir Craftsman's Select 21826, A. R. 2006	9598.30	4.80	460.56
Average first eight cows, Class A	10106.11	4.98	503.82
Glendale of Mixter Farm 38532, A. R. 2004	4805.40	6.60	316.96
Germania's Great Granddaughter 26180	10964.70	4.35	477.11
Falmouth Dora 19841	8549.60		403.68
Lady Nobska 19711	7811.00		373.69
Glassie 20659	8408.70		427.87

There are now twenty three animals under test.

Gemina 20650
Sire Le Pierre of Hardwick 386 Dam Gelenina 18252

Along the lines of breeding and production then the herd is fast improving as is shown by the selection of popular blood lines to head the herd and by the fact also that the production of the entire herd in 1912 was three hundred pounds of milk and sixteen pounds of butter fat over that of 1911, notwithstanding the fact that the average included 15 more two years olds in 1912 than in 1911. The farm is in charge of S. R. Parker who is well qualified for this work through his college training and six years of practical experience in breeding Guernseys and other dairy cattle.—H.

Lady Anne of Hardwick 26492
Sire Lord Hardwick 2d 5981 Dam Anne of Hardwick 14541

English Guernsey Cattle Society

A meeting of the Council of the English Guernsey Cattle Society was recently held at 12 Hanover Square, London, W., Mr. F. H. Norman (President) presiding. There were also present: Mr. E. W. Amos, Mr. John C. Forster, Col. E. A. Fitzroy, Mr. W. A. Glynn, Mr. W. H. N. Goschen, Mr. D. Michie, Mr. H. Fitzwalter Plumztre, Mrs. Spencer Trower, and the Secretary (Mr. R. F. Ling). Letters regretting inability to attend were read from Mr. G. Titus Barham and Mr. G. F. Ferrand.

The offers of special prizes to be given by the Society in 1914 were considered, and it was resolved to make the following grants:—Royal Agricultural Society, £40 towards prize money in the inspection classes; Royal Counties Agricultural Society, £20 in the inspection classes, and £18 for prizes in a Guernsey butter test; Bath and West Agricultural Society, £10 in the inspection classes; Tunbridge Wells Agricultural Society, £15 in inspection classes: Royal Cornwall Agricultural Society, £15 in the inspection classes; Devon County Agricultural Society, £10 in the inspection classes; West Penwith Agricultural Society, £5 in the inspection classes; Sussex County Agricultural Society, £5 in the inspection classes. It was resolved to offer prizes at the Tring Show, providing satisfactory arrangements could be made. The Council then adjourned till March 18th, 1914.

GENERAL MEETING OF MEMBERS.

Mr. F. H. Norman (President) occupied the chair at a well-attended meeting. Mr. D. Michie, Col. Edward St. Aubyn and Mr. Spencer Trower were re-elected members of the Council for the ensuing three years. It was unanimously resolved to ask Mr. J. F. Remnant, M. P., Mr. A. W. Bailey Hawkins, and Mr. Godfrey Oakey to occupy seats on the Council, and the Secretary was requested to communicate with these gentlemen.

The Society's official list of judges was considered, and it was decided to issue the following list of names of gentlemen recommended by the Society to act as Guernsey judges:—E. W. Amos, Estate Office, Goodnestone, Kent; G. Titus Barham, Sudbury Park, Wembley, Middlesex: John Carre, Millmount, Guernsey; T. R. Gallienne, The Ponchez, Castel, Guernsey; H. J. Gibbs, The Lodge, Roman Road, Bemerton, Salisbury; W. A. Glynn, Sea Grove, Sea View, Isle of Wight: James Le Page, Neuve Maison, Castel, Guernsey; Alfred Le Patourel, La Ramee, Guernsey; David Michie, Tichborne Park Estate Office, Alresford, Hants; W. Trerise Richards, St. Michael's House, Marazion, Cornwall.

A letter was read which had been sent on the Society's behalf to the Secretary of the Board of Agriculture drawing the attention of the Board to the work now being carried on by the Society in connection with its milk records. It was reported by the Society's inspector that nineteen herds were now under test, representing nearly 200 animals.

The following seven new members were elected:—Thomas Walter Brider, Porters Lane, Southampton; Reginald A. Fairbanks, Pearcelands, West Hoathly; Percy G. C. Foster, Brooklands, Cambridge; Charles E. B. Long, Down End, Fareham, Hants; B. Tunstall-Behrens, Porth-en-alls, Marazion R. S. O., Cornwall; C. J. Whittington, Sandhills, Betchworth, Surrey; Edward A. Wigan, Conholt Park, Andover, Hants.

Dairy Type and the Score Card

Extracts of an Address Delivered by A. J. Glover, Associate Editor of Hoard's Dairyman, Before the Waukesha Guernsey Breeders' Association

IT does not take the student a great while to discover that dairy type, or the conformation of all breeds of dairy cattle, is the same in fundamentals or in parts which have to do with milk production. All dairy cows perform two functions, that is, reproduction and making milk beyond the needs of their progeny. The three important systems of the dairy cow, as far as milk production is concerned, are:—the digestive, the nervous and the circulatory. No matter what breed of dairy cows is being considered, these three systems are given the chief consideration, for they constitute the fundamentals of the dairy cows. That this is the fact does not do away with breed characteristics or make it impossible for one breed to be superior to another, for these essential parts may be more highly developed in one breed than in some other breed. It may be said further that the milking function has of necessity developed and requires a conformation peculiar to its work. In view of this it is not surprising that all dairy cows, of whatever breed, should approximate the same general conformation varying only in degree and in the non-essentials.

We must not overlook the fact that there are hidden characters which do not show themselves in conformation, and determining, to a large degree, the differences between dairy breeds. For instance, the Guernsey gives a yellower milk than any of the other dairy breeds, and the milk of the Channel Island cattle is richer in fat than the milk of the breeds of cattle in Holland. It may be said, too, that cows within the breed vary in both conformation and hidden characters. Anyone who has exhibited cattle or tested milk knows this.

It is my desire to call your attention to the importance of making a deeper study of dairy conformation, that is, from a physiological standpoint. There must be some type with characteristics peculiar to itself which is more efficient for milk production than any other type although I realize that there is a wide difference of opinion as to what such a type is and that it may vary a great deal. I am mindful of this fact, because several times I have had occasion to superintend cattle exhibits and have noted the different types of animals shown. I have learned, too, that some judges prefer one type, and other judges another type. Last year at the International Dairy Show, at Milwaukee, a prominent Guernsey breeder remarked: "If I had known this judge preferred the refined type of Guernsey I would have brought that kind. Last year the judge preferred the coarse, heavier type, the kind I am trying to breed, and for this reason I brought the larger, coarser animals." Is the show ring advancing the cause of the breeder when he must abide by the preference of the judge and not by the type that makes for the greatest milk production? The exhibitor who knows or can guess the type of animal the judge—under whom his cattle are to pass—prefers, can usually do better than the breeder who pays no attention to the preference of the judge.

Now, this is wrong. Little headway can be made in establishing a uniform type or a type of the highest productive powers unless there is a uniform standard under which all judges work. I believe the time has come when the American Guernsey Cattle Club and all other breed associations can afford to urge the experiment stations to study dairy conformation more scientifically than they have in the past. To do this the experiment station will have to employ not only practical cow men but men who understand physiology, histology, chemistry, etc. But what of that? The necessity for such work is most urgent. In the past twenty years, we have made but little, if any progress in judging dairy cattle. We have better cattle but the leaders of dairy thought and teachers are advocating the same type of cows now that the were then and giving about the same reasons for their opinions.

It is held that a cow must have a large digestive tract. Its capacity is indicated by the length and depth of body of the animal, for a large digestive tract, it is reasoned, will require a larger body to enclose it than a smaller one. Well, that is reasonable so far as it goes, but it omits the important fact that the steer eats as much as the cow; hence, may not there be other indications of large or effective digestive and assimilative powers if the search light of physiologists were turned upon this subject? Have you not seen cows that did not have apparently a large digestive tract that have done more than ordinary work at the pail? And vice versa, does a large digestive tract insure a large yield of milk? The appearance of the animal's body is materially changed through the character of feed. The feeding of roughage expands the digestive tract and undoubtedly increases its capacity, provided it is of the right kind. Straw and corn stover would not be selected by experienced breeders, for they lack in nutriment. The extensive use of mill feeds tends to lessen the size of the body, and we judge the alimentary canal is smaller and less efficient. But is it? Who has made any deep study to determine the effects of feeding roughage and the effects of feeding concentrates, upon the size, efficiency and capacity of the digestive organs? In Denmark a 1,000 lb. cow consumes daily as high as 100 lbs. of mangles with other feeds. In this country we consider 50 to 60 lbs. of mangles per 1,000 lbs. live weight liberal. This does not mean that the digestive organs of the Danish cattle are more efficient than ours, but it does show they have a greater capacity for certain kinds of feeds. Something more than size is required.

All the organs of the body are controlled by a system of nerves. In dairy cattle great stress is laid upon the nervous system, for it not only controls the digestive tract, but has also a very direct influence upon the milk secretion. It is desirable to have an animal with a strong and well developed nervous system. But at the present time we have a very crude way of measuring it. Roughly speaking, we judge the development of the nervous system by the width of the animal's forehead, or width of neck just back of the horns; by the fullness and character of the eye and closely tied together vertebrae. An intelligent head is sought, also the round, full eye, because they indicate or are supposed to indicate an active nerve force, and a loosely tied together vertebrae, because this arrangement is supposed to permit

the nerves to pass easily and freely to all parts of the body. But who knows definitely if these points are well taken? Is our crude way of judging them the most perfect way possible to devise? From observation we know the nervous temperament is characteristic of the dairy cow. But little headway has been made to interpret the nervous force of an animal since former Governor Hoard presented this theory, nearly thirty years ago. Here, I believe, is a field for investigators, and breed organizations should move to have some systematic work done to unfold knowledge concerning the development and influence of the nervous system of the dairy cow.

The circulatory system is the third item in what I have called the fundamentals. Milk is made from the blood. The blood must be well nourished and be carried freely and from all parts of the body, if the cow is to do her best work. The common expression is "We want a strong and well developed circulatory system and this is indicated by large, branching milk veins and large milk wells." There is no question but that a good circulatory system is important but—is our measure the most accurate measure obtainable? Dr. Alfred King has said in Hoard's Dairyman:

"The flow of blood through the veins depends upon the force of heart action and arterial tension which forces it into them through the capillaries; the suction of the right side of the heart and the suction of the expanding chest wall during inspiration; the contraction of any muscles which acting may press upon the veins and gravity. In the case of the milk veins the blood is forced into them through the capillaries. The suction power of the heart and of the chest wall during inspiration is interfered with by the smaller size of the veins inside of the chest which are the continuation of the milk veins. If this suction power was very great on these veins they would become smaller, at least with each expansion of the chest, but no such effect is seen. No muscle presses upon these veins, so this action does not occur here.

"Gravity, then, is the important force which acts upon the flow of blood in these large veins beneath the belly of the cow and this force maintains the distention of the veins and greatly impairs the flow of blood through them. As for these large milk veins showing any large flow of blood, the evidence is all against any such idea and I cannot agree with the superintendent of an experiment station when he says:—'The size of a cow's milk veins and milk wells indicates the amount of blood that flows through the udder.'

"Further, all the blood which enters the udder does not leave by these milk veins, but by other veins which pass in other directions. This is especially true of the hind quarters of the udder. It is true, therefore, that a good circulation may take place through the udder, especially posteriorly, without regard to these so-called milk veins.

"This fact impresses me with the opinion that the rule holds good even in the cow, that dilated or varicose veins retard circulation and thereby impair nutrition, interfere with development and lessen functional activity.

"If the veins of the posterior udder are not so much affected by pregnancy, we ought to find that portion better nourished, better developed and producing more milk, and the anterior portion, with which the milk veins are most intimately connected, would be the poorest nourished and the least productive. It not this the case?"

I have briefly mentioned three important systems of the dairy cows and said enough, I hope, to arouse the breeders of this association to urge a greater study of these systems and their relation to the function of the cow at the experiment stations. I do not desire to belittle the present method of judging dairy cattle, for it is serving a purpose, but I do urge a greater understanding of the physiological laws which govern this wonderful animal, the dairy cow.

There is no one so prejudiced in favor or against a breed of dairy cattle that he will not recognize that each breed has many things in common with the others and the three systems namely—the nervous temperament, digestive tract and circulatory—which I have mentioned, are as important to one breed as to another, and, so far as records are concerned, these systems are about equally developed.

Mr. Russell Jensen of the Missouri Agricultural College undertook to study the score card as a factor in judging cows and found many discrepancies between the score cards of the different breeds. This shows there is a lack of understanding concerning the physiological relation and importance of the different parts of the cow. I quote from his article to Hoard's Dairyman, as follows:—

"In a recent investigation carried on at the University of Missouri, 88 cows were scored and some interesting facts concerning the breed score cards were brought out. It was found that the score cards of the various breeds may be used with only a fair degree of accuracy in determining the relative productivity of different cows. Neither could there be found any justification for the wide differences in value which are assigned to the same point of conformation by the score cards of the different breeds.

"Actual measurements of the more vital points of conformation were taken and each cow was scored according to the score card of her breed. The cows used in this investigation included 36 Holsteins, 32 Jerseys, 14 Ayrshires and 6 Guernseys. All measuring and scoring was done by the writer and without reference to the records.

"The various breed score cards have been worked out by men who have studied the breeds, who have had in their minds the picture of an ideal cow. The score cards have been gotten up in such a way that a definite value is given to each point of conformation, and should a cow measure up to the standard of the score card she would be considered a perfect cow.

"The score cards of the different breeds vary in many respects as to the value of different points of conformation. They have, however, the same aim; that is, the perfect cow."

The following is a comparision of the score cards in a condensed form and shows to what extent the score cards of the leading breeds differ:

	Holstein	Jersey	Ayrshire	Guernsey.
Head	11	7	10	5
Neck	4	5	3	5
Body	51	35	34	25
Quality	8	6	6	3
Udder	12	28	22	20
Milk Veins	10	4	5	8
Teats	2	8	8	6
Color			2	15
Escutcheon	2		2	2
Indications of quality of flow				6
Style and general appearance	2	10	4	3
Size and weight		3	4	2
Total	100	100	100	100

Neck, backbone, shoulders, hind and forequarters.

It well be noticed from this comparison that the points are grouped as much under one head as possible. For instance, all the points given to the different parts of the head are grouped under head, and all the points included in the bodily make-up are grouped under body, etc. It will further be noticed that there is a very great difference shown by these score cards as to the relative value of the various points of conformation."

Let us analyze briefly these score cards, or rather where they differ in what might be called the fundamentals. The head, which indicates nerve force, is given 11 points out of 100 in the score card for the Holstein and only 5 points is allowed by the Guernsey score card; the Holstein score card gives 51 points to body and the Guernsey only 25; the Holstein score card gives 12 to the udder and the Jersey 28; the Jersey score card gives 4 points to milk veins and the Guernsey 8 points, yet each breed produces about the same amount of milk which tests practically the same; the Holstein score card gives 10 points to milk veins. I can see where there might be slight differences in points of the score cards of the different breeds, but not so much as exists between the Holstein and the Guernsey concerning the body. The digestive tract of one breed is just as important as it is to the other, and surely the records of the Gurenseys are not such as to warrant them to give only 25 points and the Holsteins 51, for the Holsteins is quite as capable a cow as the Guernsey, or perhaps it would be better to say she has quite as good digestive powers. I may well ask why this great difference in score cards between the different breeds, especially those parts dealing with the fundamentals.

The main cause for these discrepancies, as I see it, is the lack of information concerning the physiological relation of the different parts of the animal. We have no definite data upon which to build a dairy score card or at least they haven't been tabulated. In other words, the records of the high producing cows and the measurements of these animals, or their conformation, have not been systematically studied and adjusted so that a score card could be built upon performance of these animals. It will require a careful study upon the part of several scientists before the score cards of the different breeds will be more accurate in valuing the different parts of the animal. It would seem that with the many records found in the several breeds that a scord card could be made of each breed which would more closely agree on the fundamentals of the dairy cow and thus do away with the striking differences of the score cards, which indicate more forcibly than we care to have them, the lack of knowledge concerning the proper conformation of the dairy cow. This step will help make the judging in the show ring more uniform and give the breeder a standard to work for, which is lacking at the present time. The arrangements of points of the score card by the records of many high producing cows would be placing the score card upon a firm foundation and would help to make the judging of cows more uniform and the basis of the judgment the rules to govern and guide the judgment, the relative values of the items which make up its conformation would rest upon performance and not upon a preconceived notion as to what type a dairy cow should be.

The Guernsey in Australia

There is a general consensus of opinion amongst the most progressive dairy farmers of Australia in favor of the Guernsey. The cows are found to be reliable milk yielders, with a high fat content. They are built on large lines, and in varying Australian conditions have given proof of their constitution and bility to thrive under open air treatment. The milking capacity of the pure bred Guernsey has been developed by years of selection and careful treatment. A feature of the growing popularity of the Guernsey has been the extent to which it has been introduced into the United States. What is known as the American boom started some three years ago, and, in consequence, good Guernsey stock now command almost prohibitive prices. This new development is not regarded with favor by the islanders, since the depletion of local herds, due to tempting financial offers, could only end to the disadvantage of the whole community.

EXPERIENCE IN NEW SOUTH WALES.

"From the day on which the first importation of Guernsey cattle was landed in Sydney by the New South Wales Government in 1898," writes Mr. O'Callaghan, the dairy expert of that State, "the breed has grown in popularity, until at the present time they are the most sought after of any of the dairy breeds by farmers who wish to introduce new blood into their herds. In every district in New South Wales in which the breed has been tried they have given almost universal satisfaction. Of course, when I state this, I mean that the animals which have been used for the purpose of crossing with the ordinary half bred cattle have produced offspring which have more than come up to the expectations of the farmers who bred them. Guernseys got a foothold first in the Richmond River district of New South Wales, probably because there was no prejudice in that new and progressive place, and hence those farmers who were anxious to improve their herds gave the breed a trial. The Guernsey bull "Peter" was stationed there, and his results were so successful that the breed at once became sought after, until now the inquiries for young bulls of this breed are very much greater than the supply."

THE POSITION IN VICTORIA.

So far the Guernsey has not obtained a strong footing in Victoria, though skilled dairymen, who have studied the performance of local animals, are strongly impressed with the belief that sooner or later they must grow in demand. Mr. Carroll, who is attached to the Victorian Dairy department, has been brought into close contact with Victorian Guernseys, and he describes their butter making capacity as a revelation. There are good grounds for believing that no better means is in sight of levelling up the butter making capacity of Victorian cows, than by a general use of Guernsey bulls. Victorian experience with the breed has evidenced, in the first place, that the animals thrive well on pasture and require no coddling; and, secondly, that the offspring of pure stock is often superior to the imported parents. There is quite the possibility, according to an experienced Guernsey breeder in Victoria, that a type may be produced better in frame and butter production than those which have gained fame and high prices in their native island.

LOCAL RECORDS.

In a leading Victorian Guernsey herd there are now gathered together a total of 32 typical representatives of the breed. Some were imported, others were bred on the farm. The most recent addition to the herd consists of a valuable contingent of English bred cows originally taken into one of the wheat growing districts of South Australia, and recently purchased by the present owner. Prominent amongst this herd is Daisy of Seagrave, who was raised in the Isle of Wight. Her breeding is of the best, the sire being Roland of Seaview the Third, while on the dam's side she is connected with Billy the First, a noted Guernsey Island bull. Daisy was brought into her new home on 7th December, and in the first 24 days yielded 75 gallons of milk, whose average butter fat test was 6.6. Daisy built on generous lines, weighs about 1200 pounds has a good skin, a well sprung body, and is deep in the barrel. Her udder is well set on in front, and carries out full behind, the milk veins being long, prominent and tortuous. She has the wide muzzle which indicates good feeding capacity, possesses a beautifully full eye, and is of good length from the eye to the nose, which point specialists in the breed regard as an evidence of good milking ability. An exceptionally long neck, well laid on at the shoulders, and good lines along the wither are other good featurs. Melbourne Leader.

Guernseys in Prison

THE only Guernseys seen in Utah were at the Utah State Prison, or the so called "State Pen." in Salt Lake City They were not allowed to attend the State Fair, but it is hoped as a result of the good records they are making that another year will see them among their sister breeds. The story of how they got into prison, as is the case with most inmates of such institutions throughout the country, dates back for some years. Bad behavior was the primary cause.

The warden stated that seventy-five percent of their prisoners were from other states; that Salt Lake City seemed to be the stopping place for criminals going to and from the western coast and most of their inmates were bad characters. They are put to good use in building the state roads, while others do the work on the prison farm and grounds. Well cared for and protected they certainly are, even if the majority do come from outside of Utah.

Sweetie's Fawn 38135

Sire Bosky 9925 Dam Lenda 26235

The Guernseys orginally came from Wisconsin and had poor records there. Two young men conceived the idea of going into Guernsey cattle production as a side issue and stocked a farm. The venture as handled not proving a success, a sale was had and all disposed of but four head that nobody seemed to want. The Agricultural College of Utah wishing some Guernseys, but having only a small amount to expend for them, happened by correspondence with one of the owners to learn of these cows, and they were glad to dispose of them for the sum which the Utah official had at command. The cows were put into Experiment Station work, with its constant changes of feed and conditions, and the results obtained (the records and the calves produced) proved very unsatisfactory. It was finally determined, after several years, to get rid of the entire lot, which including the purchase of a bull, had increased to ten head, the authorities concluding it was better for them to turn all their attention to only two dairy breeds. From College to Prison was the fate of the Guernseys.

They were offered to the warden at a lump figure of $520.00 $100.00 for the bull and $410.00 for the other nine head. At this price, even if beefed, not much could be lost. It was this bull Bosky 9925, a son of Starlight's Excelsior 7992, A. R. and whose dam was Marsena of Prospect 15506, A. R. 736, bred by and purchased of Ex-Governor W. D. Hoard, who set up a new standard and raised the reputation of Guernseys in Utah. The herd came near meeting with a similar fate at the "State Pen", but Deputy Warden Ure pleaded for them and begged for a longer and careful trial. They were watched and accurate records kept of both milk production and butterfat test and very interesting results obtained.

The prison herd was about equally divided between Guernseys and Jerseys, the latter being well bred, registered stock and good individually. It was found that on the same feed the Guernseys excelled their companions from a neighboring isle in every respect. Their disposition and behavior, as well as the results of their labor, was all in favor of the Guernseys. It was also found that every daughter sired by Bosky 9925 excelled her mother in milk and butter fat production. This in itself was interesting and proved as a calf the value of a sire of good breeding.

After being under prison discipline for a couple of years, $1500.00 was offered the Warden for his $510.00 purchase and rejected. They had been given a chance and by good behavior had made good. The herd has now increased to some twenty head, Bosky 9925 sold and a young bull purchased to breed to his daughters. More than half was paid

for this youngster than for the original ten head.

This bull, Fleurie's Mar of Iowa 22140, was purchased on order from the Iowa Dairy Farms at Waterloo, and is a son of Imp. Lord Mar 14359 A. R., and out of Fleurie XII 34321. He is a fine individual and his first progeny is a nice heifer calf only a few weeks old. Her mother Sweetie's Fawn 38135, a daughter of Sweetie 19756 and sired by Bosky 9925, made last year with her first calf an excellent record. Sweetie 10756, who calved December 25th and whose record began January 1st, has made in nine months 6481.5 lbs. of milk with her first calf. Ruby of Utah 38479, whose record did not start until two months and twenty days after freshening, made 9504.5 lbs. of milk, testing 5.10%. This is fine, especially when we consider that it does not include nearly three of the best months in her year. These records were made by feeding only six lbs. of bran daily with alfalfa hay.

The herd, as it now stands, is a fine example of what good care and correct breeding can accomplish with a seemingly poor record to begin with. It is not fair to say that being in State Prison they had to do well It was in them by birth, and being given a chance they have shown the good qualities of the breed and made good. It is hoped that worthy sons and daughters may go out from these prison walls to build up the dairy interests of the state.—B.

Bosky 9925

Sire Starlight's Excelsior 7992. Dam Marsena of Prospect 15506.

Linda Vista Farm Notes

A recent importation for Linda Vista Farm consists of some ten head of "May Rose" Guernseys, including the great "May Rose" bull, Itchen Red Raider, E. G. H. B. 2042, formerly at the head of the famous Tichborne herd, Tichborne Park, Alresford, England.

The Linda Vista herd now comprises over fifty head, and every animal with but three exceptions, carries a material infusion of "May Rose" blood.

The senior herd bull, Jethro's May King of Linda Vista 14591, is a double grandson of the great sire, Imp. King of the May 9001. A. R. 72, and carries 18.75% of the blood of May Rose II.

The imported herd bull, Itchen Red Raider, (above referred to) is a son of Itchen May Rose, E. G. H. B., who was one of the most noted cows in England. She is a daughter of May Rose II and a full sister to Imp. May Rose King 8336, A. R. 41.

It is hardly necessary to refer to the fact that Imp. May Rose King is the sire of Imp. King of the May and twenty tested daughters, all with exceptionally creditable records. Of the fourteen daughters of Imp. May Rose King now living, eight are members of the Linda Vista herd.

Imp. Itchen Red Raider was sired by Moss Raider, he by Itchen Raider, he by the 'May Rose' bull, Golden Secret; the dam of Moss Raider was Itchen Moss Rose, by Itchen May Day, out of Itchen May Rose.

Itchen Red Raider carries 31.25% of the blood of May Rose II.

The 'Donna May' family (being the progeny of the daughters of the old May Rose King sired by Jethro's May King) carry 21.875%, or more, of the blood of May Rose II. It is intended to breed the 'Donna May' females to Itchen Red Raider, in which event the progeny will carry at least 25% of the blood of May Rose II.

Tyranena Guernsey Farm

Rev. E. G. Updyke, Owner

Grade and Pure Bred Herd on Updykes Place, Lake Mills

TYRANENA Guernsey Farm, is located about one-half mile north of Lake Mills, a town thirty miles from Madison, the capital city of Wisconsin. The farm has a half mile of beautiful water frontage on Rock Lake and comprises 200 acres of good pasture and farm land.

It is primarily a lake shore proposition and when bought four years ago, was intended merely to supply the family needs in the way of milk, cream, and garden products. The friends who visited Mr. Updyke's table, however, were so taken with the delightful flavor and beautiful rich color of his milk and cream, that they asked where such milk was produced and where it could be procured.

As a result of these inquiries a small cream trade was started among the neighbors. This soon grew, however, to such proportions that Mr. Updyke was unable to handle it in connection with his other interests and decided to drop all his customers, producing again for his family use only. A protest was immediately entered by the customers and they finally prevailed upon Mr. Updyke to allow one of the grocers in Madison to distribute his product.

This arrangement had not been long under way when the demand became so great, partly through a little advertising on the part of the grocer, that lately, the barn has been extended and the herd increased from thirty to fifty cows. For this 33 per cent. cream a part of which is bottled and sold to city customers and the rest sold in bulk to Cladbourne Hall, the girls' dormitory at the University of Wisconsin a price of 55 cents per pound of butter fat is received.

Mr. Updyke says, "The flavor and color of Guernsey milk makes an ever increasing demand when known, and the only reason it is not more in demand is because it is not well enough known." The chief value of milk and cream is in the butter fat they contain. When you buy milk which tests 3.5 per cent butter fat, and pay eight cents per quart, you are paying for your butter fat at the rate of $1.14 per pound, while for this cream you pay but 75 cents for the butter fat, and this includes the cost of careful handling, transportation and distribution.

A quart of thirty-three per cent. cream made from ordinary market milk at local prices will cost seventy-six cents, while the Tyranena cream costs but fifty cents per quart. This is a difference of fifty per cent. in cost in favor of the Tyranena cream.

One quart of this cream diluted with one quart of milk will produce two quarts of cream as high in butter fat as that sold on the market.

The herd is comprised of high grade and pure bred Guernsey cows and altogether embraces about fifty animals. The herd is absolutely free from tuberculosis. It has been regularly tested for more than five years. The health of each animal is carefully looked after by an expert. The stables are light and well ventilated, and the conditions for milk production are as good as they can be made.

The cows are groomed daily when in the stables, the udders are washed and dried before milking. The milkers do their work with clean hands. Covered pails are used. The cream is separated with power from an electric motor; it is cooled as it comes from the separator; is bottled, sealed with the Dacro crown cap and placed at once in a well insulated cement refrigerator, holding more than 1000 pounds of ice; is shipped on ice and kept on ice till delivered to consumer.

Every utensil is carefully washed and sterilized in a sterilizing oven, under steam at high pressure.—H.

Individual Winnings During Fall Shows

The following list is intended to credit the individual animals with their winnings during the Fall shows. It should be of interest in making up pedigrees. It is made up from the published list of winnings and verified as far as possible

AFRICAN OSTRICH FARM & FEATHER CO., BLOOMSBURG. PA.

Guernsey Jottings

Report of the Second Annual Meeting of the Maine State Guernsey Association.

THE Maine State Guernsey Association held its second annual meeting at Orono, Me., Nov. 4th, 1913. The following officers were elected: Pres. Herbert E. Coffin, Berwick; Secretary, Geo. S. Smith, Monmouth; Treasurer E. C. Patten, Topsham; Executive Committee, E. C. Carll, Augusta, Lyman Blair, Greenville, Free L. Morrill, Cornish.

Mr. Charles L. Hill of Rosendale, Wis., President of The American Guernsey Cattle Club, was present and made some interesting and instructive remarks. President Hill gave his illustrated lecture in the evening. The pictures of Guernsey and its cattle and some of the fine Guernseys in this country will be long remembered by all that saw them.

Our state Association wishes to thank The American Guernsey Cattle Club for sending President Hill to us. His lecture was a rare treat indeed.

Report.

Mr. President and Members of the Association:

As Chairman of the Guernsey committee, I am pleased to make the following report.

The Guernsey as a dairy animal stands well to the front as a producer of the best products at the least cost. As a breed, we find them a subject in which the farmers who have been keeping grade stock, take an increasing interest.

Prices are good for males and females, and we find that several persons, who were not breeding the Guernseys a year ago, are doing so at present.

There is also an increase in the number of breeders who have cows working out advanced Registry tests. In connection with the following, I wish to speak of the record and work of that good cow Grace of Pomeroy 28557.

On September 9, 1913, she finished her year's record, making 11,336 pounds of milk and 481 pounds of butter fat. She made 152 pounds more of fat than required. This was done while the cow was standing in her regular place in the barn, and on a grain ration not exceedig ten pounds per day, and during that time she was milked but twice daily. As I understand it, this is the best record of a Maine bred and owned Guernsey. The State School for Boys as owner, and Mr. Charles Dunn, superintendent of the school and director of her test, may well be congratulated on her good work.

Comly 5th 13068 of Mr. Blair's herd, Greenville, has produced in 153 days 228 pounds of fat and 5092 pounds of milk.

Several others cows of the same herd are doing good work.

The University of Maine is still in the work, and the cows owned by the College seem to have little or no trouble in making records.

There is nothing which shows the true value of a cow, grade or pure bred, as that which she will do in a year's test. We go to the show ring and get jugded mostly for type, but an animal may be a winner of the first prize and yet not pay her way as a producer. We cannot rid ourselves of the idea that production should be first and type afterwards. I think we need have no fear as to the future of the Guernsey in our state. As a producer of the very best products of the dairy, the Guernsey is here and is here to stay, and she will make those products at lowest cost of any cow.

George S. Smith, Monmouth, Maine.

Notes from Maine.

By W. F. McSparran, in Jersey Bulletin.

THE commissioner of agriculture gave me orders to make a pair of speeches down the state on a certain day and report to Orono, where they have the Maine University, to talk to the Maine Jersey Breeders' Association in the evening. The breeders of Maine were holding their annual meeting, and as the Jersey breeders didn't want to be selfish they told me I was to talk to everybody, from Governor Haines, who breeds Shorthorns, Guernseys and respect for the prohibition law, down through all sorts of breeders to the professors, who breed and incubate theories. So, the carefully prepared heart-to-hears talk I had in my system for Maine Jersey breeders only had to be changed without notice to a general purpose talk.

My good friend Hill, president of the A. G. C. Club, was there also, and you may depend upon it, the Guernsey breed lost no ground that night at Orono.

Then, as usual, one of the—I may call them after-dinner speakers—one of them took me apart and looking all through me, spoke:

"Say will you tell me why in the world (I think those were his words) don't we Jersey people get to doing something?" I showed him my tautological innocence and told him I had no proof.

Then he continued: "Don't you see what our friends, the Guernsey people, are doing? Here they have had the very president of their club here to talk and show Guernseys, and I think entirely at the expense of the club, while we Jersey people have to put up with any old thing: and wouldn't even have had you if Commissioner Roberts hadn't loaned you to us!"

But the Jerseys, as well as I, have plenty of them there, loyal and true, and they are keeping the faith, and as individuals are trying to do that which a powerfully organized democratic American club should do."

Guernsey Interests in Indiana Organize.

AT an informal meeting at Frankfort, Indiana, Nov. 26, the Indiana Guernsey Breeders organized an Association. The purpose of the Association is to promote the Guernsey Breed in Indiana and to help members of the Association to buy and sell pure bred and high grade Guernsey Stock. It is also the aim of the Association to do what it can to help the Dairy Interest in Indiana.

The Membership is not limited and any one who has the Dairy Interest of Indiana at heart can become a member. It is, however, urged that each and every one who is particularly interested in Guernsey Cattle to join this Association. The membership fees are $1.00 (one dollar) per year.

It is the duty of the Secretary to keep a list at all times of all Guernsey Stock offered for sale by the members of this Association, and to mail a copy of this list to whoever wants the list. The entering fee is 50c per head.

The Officers elected to serve until the First Annual Meeting which is Wednesday evening at Purdue during the Short Course in January, 1914, are as follows:—W. O. Mills, of Mooresville, Ind., President; Fred R. Davis, Frankfort, Ind., Vice-president; W. Monroe Schlosser, of Frankfort, Ind., Secretary-Treasurer; L. C. Sanders, Acton, Ind., Director; O. M. Worster, Warren, Ind., Director; Clem Herschberger, Bremen, Ind., Director; and Chas. Arthur Carlisle, of South Bend, Ind., Director.

Any further information desired will be cheerfully given if application is made to the Secretary at Frankfort, Indiana.

W. MONROE SCHLOSSER, Secretary.

North Home Guernseys

We give in connection with this item, a picture of Princess Makefield 30740, owned by J. L. Doan, of Barnum, Minn. Mr. Doan writes as follows regarding her.

"Princess Makefield was first prize cow at the Carlton County Fair, 1912 and 1913; also won Sweepstakes both years for best dairy cow, any age or breed. Was second in the twenty-four hour butter test, 1912, being 130 days in milk; and third in 1913, 154 days in milk, making 1.225 lbs. fat at 4 yrs. 47 days old."

Princess Makefield 30740

Sire Prince Mac of Katonah 11030 Dam Lady Makefield of Norwood 15287

He further writes of his herd:

"North Home herd won first and second in Registered Guernsey class, 3 yrs. or over; first and second in class, 2 and under 3; first and third in class, 1 yr. and under 2; first on heifer under 1 yr; third on registered bull calf under 1 yr.; sweepstakes for best dairy herd, consisting of bull and four females; silver cup donated by State Dairyman's Association; silver cup donated by N. P. R. R. Co., for best dairy cow, any age or breed, to be won three times by one exhibitor, Jerseys, Holsteins and Guernseys competing; also second in twenty-four hour butter test with Pride of North Home 32396, 1.40 lbs. fat. 98 days in milk, age 3 yrs. 175 days old."

There were 78 cattle exhibited, of which 46 were Guernseys. Five years Mr. Doan had a Guernsey bull calf at the same Fair, the first one ever shown there. There are now 12 sires in the community, which is more than twice the number of Jersey and Holstein sires combined. Good Grades sell there for $100. each and there are good prospects for more bulls to be taken to the community.

New Guernsey Breeders' Association.

The Door County Guernsey Breeders' Association of Sturgeon Bay, Wis., formally organized on Sept. 29th, has already gained notice locally. The present membership numbers about fifteen.

The efforts of this organization will for the present be directed to improving the stock and stimulating the interest of the dairymen of the vicinity in Guernsey blood. Meetings and addresses of a public character will be held frequently and by work and deed to encourage grading up and bringing in of registered stock all through the County.

HILLCREST Farm, Des Moines, Iowa, A. I. Stubbs, Prop., reports a very successful season on the fair circuit, winning eight Grand Championships, seventeen Championships, fifty-four 1sts, thirty-four 2ds, sixteen 3ds, eight 4ths, five 5ths, and two 6ths, making a total of 144 ribbons.

Columbia County Guernsey Breeders Association Meet at Farm of T. E. Hyde, Bloomsburg, Pennsylvania.

THE advantage offered by Columbia County as a Guernsey breeding district, and methods of breeding in the county, were discussed yesterday at a meeting of the Columbia County Guernsey Breeders' Association, at the farm of T. E. Hyde, at Grovania. Sixty or more breeders, from all parts of Columbia and Montour counties, attended the meeting, and there were one or two Northumberland and Luzerne county breeders at the meeting.

The breeders met in the electrically lighted barn of the Edgemont farm, while the cows which they discussed looked on from their stalls. C. H. Dildine, of Orangeville, spoke on the advantage of good stock to the farmer, and S. H. Harman spoke on dairying problems of the county. T. E. Hyde, whose herd of Guernseys is recognized as one of the finest in the county, spoke on Guernsey herds and the problems which they present to the breeder.

The breeders were enthusiastic over the prospects that Guernsey breeding offers in the county. The progress which has been made in the comparatively few years since the bred was first introduced, is little short of extraordinary. While only a short time ago the Guernsey was unknown in the county, there are now thirty farmers and dairymen who have herds of varying sizes, and as many others are making efforts to secure stock and begin breeding.

The dairymen made an inspection of the stock and the equipment and a demonstration of the milking machine at the farm was given for them.

Those attending were: J. B. Nuss, J. A. Lohr, J. B. Schneck, H. Mowrey, Frank Mensch, Harry Mensch, James Gardner, Wm. Kiener, G. Lowe, Jas. Ostrander, O. E. Cherrington, Delmar Sharretts, Ray Levan, John Fetterman, J. L. Levan, M. J. Grimes, Wm. Greenough, Chas. Woodruff, A. A. Geiser, Wm. Linker, H. R. Goss, Hiram Purdy, Qm. Chrisman, Esq., Jno. Bowman, J. G. Jones, Wm. Helwig, H. P. Jones, A. N. Yost, Samuel Yost, Clarence Yost, J. E. Teeple, Ford Bacon, S. H. Harman, C. A. Pursel, Howard Deily, J. G. Snyder, Wm. Lazarus, W. C. Kuster, C. Kester, J. F. Kline, H. Ikeler, D. Reigle, D. Thomas, T. E. Hyde, John Hauck, J. E. Ruckle, C. A. Ruckle, C. H. Dildine, E. H. Sloane, Dan Creveling, Mr. Furman, J. A. Hyde, C. H. Warner, C. E. Krum, B. M. Tustin, H. R. Kramer, H. J. Traub.

Revenue from Guernsey Cattle

Special Meeting of Members of Royal Guernsey Agricultural and Horticultural Society

MR. Osmond Priaulx presided at the special general meeting of the members of the Royal Guernsey Agricultural and Horticultural Society which was held on Thursday, November 27, at the New Market Hall. There was a very large attendance, the hall being practically full.

The business was to take into consideration several proposals made by the Herd Book Council with regard to the constitution of a separate Herd Book department and other necessary changes.

Before proceeding with the business the Chairman appealed to the meeting to help him in keeping all acrimonious feeling away from the discussion, especially as the subjects for discussion were of a controversial nature. He asked Mr. Mauger, the President of the Herd Book Council, to state the reasons why these proposals were brought forward.

£20,000 Yearly Revenue.

Mr. W. Mauger said that previous to this meeting he had convened the Herd Book Council and what he had to say had their full approval and that afternoon the Guernsey Farmers' Association had met, and also approved of the proposals which would be put before the meeting that evening.

In the course of his remarks Mr. Mauger said that the Herd Book now numbered about 15,000 entries, the yearly registration was over 1,200 and the annual export was near a thosand. The value of the export trade to the island (not breeders only) was so far as could be ascertained, about £20,000 a year, and the Society must realize the responsibility which rested with the Herd Book Council in the fostering of these dimensions.

Drastic Changes had to be Made.

Recent events had proved conclusively to the Council that drastic changes must be made in the present system, and after mature and careful consideration certain recommendations were made to the managing Committee, and they came to the meeting for the necessary powers to put their house in order. The present system had broken down for various reasons, most of which lay with the farmers and breeders themselves, but the desire was to make the system so effective as to prevent even the breeders making mistakes.

The Society's Revenue.

The principal revenue of the Society has been the fees paid for the registration and transfer of cattle; also the export fees paid by the American buyers, and it was these buyers who had very politely intimated that these fees were paid them in return for an accurate record.

This accuracy they had, in many cases, failed to give them, with the result that the Herd Book was getting into bad repute and severe losses had been made in the cases of animals going out to America with a faulty registration, and having to be sold without a pedigree.

Adequate Staffing.

The Council were of opinion that it was only by the appointment of an adequate staff whose attention shall be entirely confined to Herd Book matters in an office devoted entirely to Herd Book Work, and the re-organization of the system, that such accuracy could be furnished. At present they possessed no powers for spending money and it was an anomalous position to place the Council in.

The estimated revenue to the Herd Book for the year, by the registration, transfer, and export certificates would be well over £500. The question before the meeting was whether they were going to meet the reasonable demands of their best customers or vote against and lose the source of most of their revenue.

He then proposed—

1.—That the Society's Herd Book be worked as a separate department with an adequate staff under the control of the Herd Book Council.

Mr. J. Rossiter Gibbon in seconding, said there could be no hesitation at having a separate department. It was also necessary to have an adequate staff to carry on the responsible work, and that the statistics of the Society be worthy of its name.

The Discussion.

Mr. E. T. Wheadon did not think the propostion was very clear as regards the payment of this staff.

Capt. McCrea asked what was to be considered as an adequate staff. How many, and what pay were they to get?

Mr. Mauger said it meant a staff adequate to do the work there was to do. The whole system had to be revised and further, they had to feel their way.

Mr. A. J. Hocart (Jurat) said that for years the working of the Society was not quite satisfactory, and it was necessary that that should be made so. Couldn't they rescind the old rules?

The Chairman pointed out that this could only be done at the annual general meeting.

Capt. McCrea asked what was meant by "work."

Mr. J. Rossiter Gibbons: I quite understant that at Capt. McCrea's time of life it would be difficult to understand what work meant. (laughter).

The Chairman: No personalities, please.

Mr. T. de Mouilpied said the question was a serious one, and he thought that propositions 1 and 2 should have been amalgamated and then fully discussed. According to proposition 2 the safe would be in the hands of the Managing Committee.

The Chairman: That Committee is the Agricultural Society's Committee and not of the Herd Book Council

Mr. de Mouilpied, continuing, asked what were the limits and the powers of that Committee.

The Chairman: This is the Agricultural Society, not the Herd Book.

Mr. De Mouilpied: This is not the time for the Herd Book Council to take this step. It may be that at the end of the year they would want capital, but they could ask for it. The Agricultural flag was being hauled down and what they wanted was to haul it up. They wanted fair play. They spoke often of sportsmen, but let them all be sportsment in this matter. Years ago they did not think much of the Guernsey cow, but now that they had young bulls and heifers and good milk which made marvelous butter, they hugged the Guernsey cow.(laughter).

The Chairman: Please keep to the point. Have you a proposition?

Mr. de Mouilpied: I propose an amendment that the meeting is of opinion that there should be no alteration of the laws or by laws.

There was no seconder and the discussion was resumed on the first proposition.

The Ultimatum.

Mr. C. Kitts said the reason they proposed these alterations now instead of at the annual general meeting, was that unless they were passed now they could not pass at the annual general meeting. Mr. Mauger had shewn clearly that a change was desirable. The Society as at present constituted had several departments, and some of these which did not pay were helped by the funds of those that did. It was clear that this was very unbusinesslike. The farmers who paid their fees naturally were asking whether the funds were being used for the objects intended and the only answer was that they were not. They were not advertising their cattle except by private sources. Unless the Herd Boook Council had some funds what could they do? The money they had was being used for other purposes. Again, there was an opening in the French market for Guernsey cattle and there were other markets which were open if only they pushed their goods. There was also the fact that the registration papers were not all regular. No fewer than 33 out of one consignment were returned and it was only by having good friends in America that the whole lot were not lost. But the American buyer now said, "You must put your house in order." He said so very clearly, If they did not, the American buyers would establish an office on the island and so obtain accurate reords. The Council were, therefore, asking the members to put their thinking-caps on in the matter. If it cost them £250 to keep the Herd Book in order they would still have £250 for other purposes, but if they refused then they would lose the whole lot. The Americans had met and had given the Herd Book Council the ultimatum that he now had given them.

Mr. H. Britten said in reply to Mr. Kitts that the Herd Book Council had never made an application for funds from the Society without having had a grant. He considered that the proposition as worded was not easily comprehended. The Herd Book was a separate department now. Again, he preferred the word "direction" to the word "control" He moved an amendment to the effect that "owing to the increase of work the meeting approves of the appointment of an Assistant Secretary whose duties shall commence at the beginning of the Herd Book year." (Applause). This would meet the case and give the assistance which would be necessary for the reliability which was needed.

Capt. McCrea seconded.

In reply to questions the Chairman said that these rules if adopted would have to be confirmed at the annual general meeting. To alter any fundamental rules of a Society this must be done at the annual general meeting. What they wanted was to take the opinion of the meeting. They had been an hour discussing with regard to the first proposition and there was an amendment.

Mr. Hocart: I have another. (laughter).

Mr. J. Carre said he differed as to the Chairman's interpretation as to the rules, as if that were so they could not have any alteration before 1915.

Mr. Hocart said he understood that a good many members had come to the meeting dead against any alteration.

Mr. Kitts in a further speech said the appointment of an Assistant Secretary for the Herd Book had been considered by the Council. The effect of the proposed amendment would not be effective under the present system. He hoped that the meeting would vote the original proposition.

A ballot was taken and Mr. Britten's amendment was carried by 99 votes to 41; the result being greeted with cheers.

Yearly Budget.

2.—That the Managing Committee be empowered to vote all funds necessary for the carrying out of the Herd Book work.

Mr. E. T. Wheadon proposed an amendment to the effect that the Herd Book Council apply for a credit at the general meeting, and that the Committee be empowered to take the necessary steps for the advertising, etc.

Mr. H. Britten seconded.

Mr. Hocart proposed that a Budget be submitted at the annual general meeting.

Mr. C. B. Blampied seconded.

Mr. Wheadon's amendment obtained 29 votes, Mr. Hocart's 87, and 37 were recorded for the original proposition.

Mr. Hocart's amendment was accordingly adopted.

3.—That Official Sketchers and Verifiers be appointed to specified districts by the Herd Book Council.

Mr. Mauger explained that this proposition was absolutely necessary. Nothing had given so much trouble as some of the sketches sent in, and it was considered advisable to appoint official sketchers to do this work in future. The sketches were to be done in duplicate, one sketch to be left at the office and the other to be sent with the certificate. It would be a guarantee to the buyer. (applause).

Mr. Hocart suggested an addition to the proposition to deal with self-coloured animals. He proposed that these be branded.

Captain McCrea asked what would be the salary of these official sketchers.

Mr. Foote asked that Mr. Hocart's suggestion be not adopted as that would cause a great deal of work on the officials. Such work could be done by the owners.

Mr. Hocart pointed out that this would not be official and would not be recognized on the certificate.

The original proposition was carried by 105 votes.

4.—That the period of Sketching and Verifying Calf Sketches be within seven days of birth, such Sketch to be presented for registration at the Herd Book Office within the succeeding fourteen days; all Sketches to be made in duplicate.

Carried without discussion.

5.—That the Registration Fee be raised to Two Shillings and Sixpence to defray the extra cost of the Official Sketchers and Verifiers.

An amendment was proposed by Mr. Martel, Jun.,seconded by Mr. A. J. Hocart, that this be deleted.

Mr. Mauger said the Council felt now the meeting had adopted the proposition to have official sketchers that the breeders who would reap the benefit should pay the extra 10d.

The original proposition was carried by 38 votes—68 against 30.

6.—That subject to the approval of the Herd Book Council Members may register for their future exclusive use a word as prefix or suffix, on payment of a fee of Five Shillings.

Mr. P. Martel, jun., proposed that there be no fee.

Mr. Foote pointed out that in various parts of the island there were similar names. To avoid a conffict of names—and he was not sure that there were not many animals of the same name—he was of the opinion that the registration of these names should be free.

Mr. Martel's amendment, which was seconded by Mr. W. H. Foote, was carried by a large majority.

Mr. Foote moved voted of thanks to the chairman for the able way be had conducted the meeting, and to Mr. Mauger for the lucid way in which he had explained the objects of the proposals of the Herd Book Council.

These were seconded by Mr. J. Carre and carried by acclamation.—Guernsey Weekly Press.

ADVANCED REGISTER RECORDS COMPLETED AND APPROVED TO DECEMBER 15, 1913.

Thirty Thousand Six Hundred Fifty 30650, A. R. 2397, owned by Est. George Mixter, Hardwick, Mass. Record:—10968.10 lbs. milk; 560.11 lbs. b. f. 5 yrs. 8 mos.

Nelson Bros. Keep No Boarders

Comparison of Two Herds

The comparative value of dairy cows is strikingly set forth in a record kept of their dairy herd by Nelson Bros., the well known dairymen of Compton. That one cow would pay a net profit of $70.20 and another in the same herd only $3.50 for a year, under the same conditions and with practically the same feed and care, is almost past belief, yet this condition of affairs Nelson Bros. found to exist in their herd of grade Guernseys.

Nelson Bros. during 1912 had a herd of Guernsey grades, numbering 16 animals, of which two were heifers that only milked 6 months making an average for the year 15 milking cows. The following report of the accomplishments of this herd for the entire year 1912 was prepared after a careful record was kept by the dairymen:

The total number of pounds of milk produced by the herd for the year was 96,886, giving an average milk production per cow of 6,459 pounds.

The average test of the herd was 4.2 and the average production of butter fat per cow was 271.2 pounds. The herd produced a total of 4,068 pounds of butter fat with a value of $81.30 per cow.

This includes what was used in the Nelson home, and 80 pounds of butter fat fed to calves when young. Credit is given for skim milk and the value of the fertilizer from the cows. These two items, Nelson Bros. feel, reimbursed them for their work. In other words the value of the skim milk and the manure put on the land was worth the cost of the labor in caring for the herd.

The cows received water which was warmed in the winter time. One pound of feed was fed for every 4 pounds of milk. No feed was given the cows from May 20 until Nov. 15.

The average feed per cow was 1,280 pounds, including oats, corn, bran and oil meal, all mixed together at a cost of $1.30 per hundred pounds. The cows were fed all the hay and corn stalks they would eat. Salt was always in a box in the yard.

The average cost per pound of the butter fat produced was 15.7 cents. The returns for every $1.00 worth of feed and roughage given the cows was $1.90.

Nelson Bros. furnished us with a comparison of two cows of their herd, covering the entire year. One cow is the best in the herd and the other is the poorest. That is, one has the best record for the year in points of profits, and the other has the poorest record. The comparative figures are highly interesting and point a strong moral for every dairyman.

Cow No. 1, with the highest record gave 10,351 pounds of milk, with an average test of 4.1 worth at 30 cents per pound of butter fat, a total of $127.20. She was fed 2,400 pounds of grain at $1.30 per hundred costing $31.20; hay and corn stalks, $21.00; pasture, $5.00. The total cost of feeding this cow for the year was $57.00. She returned a net profit of $70.20 for the year.

Compared to this animal, cow No. 2, with the lowest record in the herd, gave 2,968 pounds of milk; 124 pounds of butter fat, worth 30 cents per pound, $37.30. She was fed 593 pounds of feed worth $7.70; corn stalks and hay, $21.00; pasture, $5.00, making a total cost of her feed for the year $33.70. This cow returned a net profit of only $3.50, as compared with a net profit of $70.20 returned by the leading cow of the 15 in the herd.

These two cows were given identical care, were kept in the same barn, turned into the same pasture and in every respect were given the same care and feed, except that the amount of feed given each depended upon the amount of milk each produced.

The fact that under the same conditions there can be such a great difference in cows is a vital point which no successful dairyman can overlook. In other words, cows which show themselves to be boarders pure and simple, should have no place in a dairy herd.

Cow No. 2 and one other animal in the herd cut down the production of the other 13 cows to $1.90 as a return for the feed given them. whereas, had these two poor cows not been in the herd, the others would have returned $2.07 for every $1.00 worth of feed given them.

No. 1 cow paid $2.23 for every dollars worth of feed, while No. 2 cow paid $1.10 for every dollars worth of feed.

N. Alfred Nelson, who furnished us with the above figures on Tuesday said:

We think this record can be made from the heifers of our native cows, only by using a thoroughbred dairy sire, and by giving the best of care. We are very well satisfied with our 1912 record, which has proven our best one. We find in every case but one that the heifers are better than their dams not so much in the increase of milk given, but in the test, which was increased in every case. We are at present using using our second Guernsey sire, and our three-quarter blood calves show it, as they are all well marked from our Guernsey half breeds."—The Pioneer Journal.

Guernseys for California.

IN last month's Journal, reference was made to a shipment of Guernseys to California, since then additional data has been received showing that more cattle have been sent to this farm for foundation stock.

Fifty head were shipped in all making up two car loads at an expense of over $32000.00. In this lot is Bopeep's Mar of Iowa 22134 at pretty nearly a record figure. This bull was 1st at Iowa, Wisconsin and Minnesota State Fairs, and the Waterloo Dairy Show this year. He comes from Grand Champions on both sides and with his own winnings in addition, should make good in his new home.

All Guernsey breeders are familiar with the place his dam, Glencoe's Bopeep held for so many years. Her untimely death last summer was a distinct loss to the breed. It is hoped that her progeny will add lustre to her grandchampionship record.

In the country tributary to San Diego Grade Holstein cows are about all the dairy farmers have, or seem to know much about. All milk sells regardless of quality for $3.00 per hundred pounds. It is believed that an educational campaign regarding the superior quality of Guernsey milk cannot fail to accomplish good results. Small pamphlets giving data regarding the superiority of Guernsey cows, and their standing as economical producers will be put in circulation.

There is a decided growth of interest in Guernseys on the Pacific coast, and it is hoped from this large farm at Santee, western breeders may obtain inspiration and foundation stock. A campaign of education among both consumers and dairymen will be started from this Southern California Guernsey farm under Mr. Dupee's direction. Only one hundred twenty-five miles from San Diego by automobile is being established another fine herd.

At Redlands, California, is Manana, the winter home of G. W. Wilder, Pres. of the Butterick Publishing Company, who has recently purchased from J. L. Hope an importation of heifers. When these reach California another herd consisting of four cows, sixteen heifers and two very well bred bulls, will have been established. One of these bulls is a great grandson of Dolly Dimple.

While San Diego is on the coast, Redlands is an inland city and more closely allied to Los Angeles. Southern California is to be congratulated on having two such fine herds established in its territory. At Berkeley, further north are the herds of Dr. Henderson, C. G. Lathrop and others who by their Advanced Register work and exhibits at the State Fair are making the Guernsey better known on the coast.

The Advanced Register of Guernsey Cattle

SPECIAL NOTE This list contains the latest credits and totals for the several cows entered in The Advanced Registry work so far as same has been checked up and verified at the time the list is put to press.
Any omissions or back credits given signify that either data has not been received in time, or was held up pending verification. In such instances they will appear in next list published.

THE 1914 MODEL

UNITED STATES CREAM SEPARATOR

Where we make them

But their **PERMANENT HOME** is with THRIFTY USERS from the ATLANTIC to the PACIFIC, from the GULF OF MEXICO to the FAR NORTH

THEY CIRCLE THE GLOBE

14 Warehouses—5 offices—distributed over the country

U. S. EXTRAORDINARY QUALITY UP ANOTHER NOTCH

THE NEW 1914 SANITARY LINER

for bowl chamber is easily removed **non-rusting** and **easy to wash.**

All other Separators become unsanitary because the milk, in greater or lesser quantity, comes in contact with rusty cast iron or steel. The **Liner** exclusively a U. S. feature, prevents milk contact absolutely.

This great improvement following that of the famous **Non-rusting Nickel Silver Skimming Sections,** with surfaces as non adhesive as polished ivory, completes the **Most Sanitary Separator Equipment** in existence.

The **Mechanical Washer** makes cleaning **still easier** and most complete.

The new **Automatic Oil Conductor** with its **Dust Shield** keeps all foreign matter, dust etc., from the gear chamber and lower bearings, adding years to the life of the Separator and causing the machine to always run as easy as when new.

DEWEY'S

Ready Ration

Guaranteed Analysis:

25 per cent. Protein
7 " " Fat
9 " " Fibre
50 " " Carbohydrates

Composition:

Eagle Distillers Dried Grains, Choice Cotton-Seed Meal, Old Process Linseed Oil Meal, Winter Wheat Bran and Middlings, Pure Hominy Feed, Malt Sprouts, ½ per cent. Salt.

Dewey's Ready Ration, when fed in connection with the home grown hay, straw, fodder, ensilage and roots, forms a perfectly balanced ration. It is a complete grain ration for dairy cows. No other feed or grain need be fed with it.

The Feed Question

The feed question is not or should not be one of price per ton, but of "how much milk will each dollars worth of feed produce." Dewey's Ready Ration is worth all it costs because it is scientifically blended from the highest grade feeds to produce for you all the milk possible for each dollar that you pay. "The proof of the pudding is in the eating." Try Dewey's Ready Ration. Give it a chance to convince you.

The above imported bull, two yearling bulls, and bull calves out of dams by son of May Rose King.

J. H. HUNTER, VALLEY FALLS, N. Y

There's no good reason why you should wait till spring before getting a

DE LAVAL

ON the contrary you may buy a De Laval Cream Separator NOW and save half its cost by spring. If, for any reason, you can't conveniently pay cash you can buy a De Laval on such liberal terms that it will actually pay for itself.

AS to your NEED of a sepaartor, if you have the milk of even a single cow to cream you are wasting quantity and quality of product every day you go without one. This waste is usually greatest in cold weather and with cows old in lactation, and it counts most, of course, when butter prices are high. Then with a separator there is always the sweet, warm skim-milk and saving of time and labor, in addition.

WHEN it comes to a choice of separators, De Laval superiority is now universally recognized. Those who "know" buy the De Laval to begin with. Those who don't "know" replace their other separator with a De Laval later—thousands of users do that every year. If you already have some other machine the sooner you exchange it for a De Laval the better.

WHY not start 1914 right in dairying? SEE and TRY a DE Laval NOW when you have plenty of time to investigate thoroughly. The nearest DE LAVAL agent will be glad to set up a machine for you and give you a free trial.

Guernsey Awards at Pacific International Dairy Show.

Geo. P. Grout, of Duluth, Minn., judged the Guernseys at the above show, and while only four exhibitors were out, they were apparently satisfied with the awards.

The special trophy offered by the Club was awarded to Saunders & Butler, who hold same for one year.

The exhibitors were:

A. I. & J. Hughes, Oregon City.
A. L. Gile, Chinook, Wash.
E. L. Thompson, Deer Island, Ore.
Sanders & Butler, Mesa, Ariz.

Guernsey Cattle Awards.

Bull, 3 years old or over—First, Sanders & Butler; second, A. L. Gile; third, E. L. Thompson.

Junior yearling bull, dropped between January 1, 1912,and September 1, 1912—First, A. I. & J. Hughes; second, University of California; third, E. L. Thompson; fourth, E. L. Thompson; fifth, Sanders & Butler.

Senior bull calf, dropped between September 1, 1912,and January 1, 1913—First, Sanders & Butler; second, E. L. Thompson.

Junior bull calf, dropped since January 1, 1913—First, A. L. Gile; second, University of California; third, E. L. Thompson; fourth, E. L. Thompson.

Cow, 3 years old or over—First, Sanders & Butler; second, E. L. Thompson; third, E. L. Thompson; fourth, Sanders & Butler.

Cow or heifer, 2 years old and under 3—First, Sanders & Butler; second, A. I. & J. Hughes; third, A. L. Gile; fourth, A. L. Gile; fifth, E. L. Thompson.

Senior Calf, dropped between September 1, 1912 and January 1, 1913—First, A. L. Gile; second, A. L. Gile; third, A. L. Gile, third, A. I. &. J. Hughes.

Junior heifer calf, dropped since January 1, 1913—First, A. L. Gile; second, Sanders & Butler; third, E. L. Thompson.

Champion Guernseys.

Senior champion bull, 2 years or over—Sanders & Butler.

Junior champion bull, under 2 years old—A. L. Gile.

Grand champion bull, any age—Sanders & Butler.

Senior champion cow or heifer, 2 years old or over—Sanders & Butler.

Junior Champion heifer, under 2 years old—A. L. Gile.

Grand champion cow or heifer, any age—Sanders & Butler.

Aged Herd.

First, Sanders & Butler; second, A. L. Gile.

Guernsey Growth in Wisconsin Continues.

Charles L. Hill, secretary of the Western Guernsey Breeders' Association, writing in the latest directory of the Wisconsin Live Stock Breeders' Association, which is now available for distribution, says, "Not only has Wisconsin more Guernseys than any other state, but the percentage of increase in the growth of the breeding of this breed is greater in Wisconsin than in any other state where there are any great numbers of Guernseys."

Mr. Hill credits this large growth to the work done by the Western Guernsey Breeders' Association, 110 of whose 141 members live in Wisconsin, and to the 28 community breeders' associations now organized in Wisconsin. The names of 244 breeders of pure bred Guernsey cattle, residing in 47 different counties of the state are listed in the current issue of the directory.

Nearly 2500 cows have now completed yearly records in the advanced Registry and the average production of these cows is above 8,400 pounds of milk and 425 pounds of fat. These records, and the growth of the city demand for the highly colored milk which the Guernsey cow produces, combine to make this breed the most sought after and the highest priced of all the dairy breeds. The solid, substantial basis of growth upon which the work is built assures a bright future for the Guernsey.

Polk County Guernsey Breeders' Association.

The meeting was called to order by the President, J. N. Stewart, at 10.30 a. m. Business session followed. Prof. Humphrey of Wisconsin College of Agriculture spoke after the business meeting on the advantages of living in a community where several organizations existed, such as this one was intended to be, and gave some time to the work at the Experiment Station. Meeting was adjourned until 1.30 p. m., and was again called to order and a very entertaining

IN THE ONLY DAIRY BREED TEST EVER HELD

WHERE ALL DAIRY BREEDS WERE REPRESENTED

The Guernsey Cows Won

The Prize for Net Profit in Butter Fat Production

The Prize for Net Profit in Butter Production

The Highest Average Score on Butter

The Best Rating for Color and Flavor of Butter

The Lowest Cost Per Pound of Butter Produced

The Greatest Return for $1.00 Invested in food

The best cow and three of the best five cows in the entire fifty in test were from the five Guernseys.

The Demonstration Herd at the National Dairy Show in Chicago

A Grade Guernsey Cow the Winner

The Winning Grade Guernsey

In order to impress upon the farmer the value of selecting good animals for his dairy herd and the value of testing and keeping records of the production of each individual, the United States Dairy Division instituted a cow demonstration at the National Dairy Show in Milwaukee in 1909, which has been repeated in succeeding years. In the present year the National Dairy Show Association requested the assistance of the Dairy Division in organizing and conducting a similar demonstration; and Mr. Will Forbes was detailed to select the cows and to conduct the test, expenses being borne by the Dairy Show Association.

Nine cows were selected from herds near Rosendale, Wisconsin, for this demonstration. In selecting these cows, it was hoped to obtain animals which would represent the average herd as found on farms, and to show the visiting dairy farmers just how much profit cows of the average herd were making. A few good grade cows were included in the herd to show the superiority of the good dairy cow over the scrub or native cow. All the cows had had two or more calves, and had freshened not earlier than September, 1913, so that in this respect they were on an equal footing. No attention was paid to breed in the selection of these animals, but the community where they were purchased was a Holstein and Guernsey center, and it was not surprising that the best producers were grades of these breeds.

The feed and milk of each cow was weighed, butter fat tests were made of the milk, and records were posted daily of the production of each cow. Meetings having an average attendance of 200 or 300 people were held twice each day, at which important dairy topics were discussed by men prominent in the dairy world.

Short tests ordinarily do not indicate correctly the true value of a cow, for she might make a very high production while fresh, and after a short time dry up and become a "star boarder" for several months. It is only by knowing the production of cows from week to week and from month to month that we can tell how to feed them for maximum production. This may seem a lot of work to the average farmer, but in reality it takes only about half a minute per cow per day to weigh the milk and record it. In all cases, the record of the production of the various animals in the herd gives the farmer more interest in his cows, and an incentive to give them more care and better feed, thus tending to increase their production. In fact, experience has shown that after a dairyman has begun to keep daily milk records the cows increase in milk production, even with the same feed.

In feeding cows, the farmer should know the production of each individual, and only by knowing this can he give each animal the right kinds of feed and the proper amount of each kind, to increase the milk flow. Very often cows are not fed properly for the production of maximum flow of milk; but in the case of the demonstration herd the animals were fed according to Haecker's standard, for maintenance and milk production.

The feeds used for the demonstration herd were those most commonly grown and used on dairy farms, except that roots were substituted for silage, because of the difficulty of obtaining silage at the Show. The feeds and the prices of same were as follows:

Alfalfa hay	$18	per	ton.
Roots	6	"	"
Clover hay	15	"	"
Corn meal	25	"	"
Wheat bran	24	"	"
Linseed meal	30	"	"
Ground Oats	25	"	"

The following table gives a summary of the work performed by each cow in the demonstration herd.

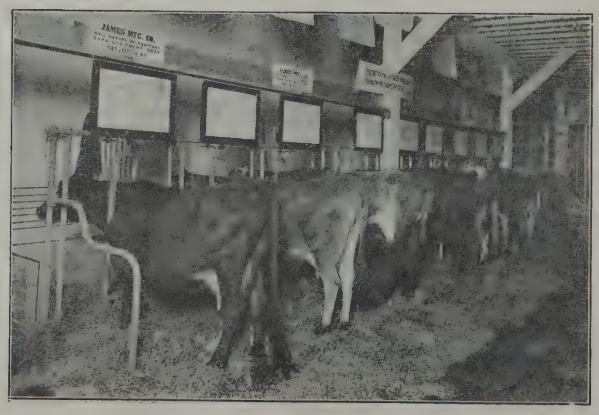
DEMONSTRATION HERD—1913.

Total Production of Each Cow for 9 Days.

Cows No.	Month Freshening	Weight	Pounds of Milk	Average Fat Test	Pounds of Fat for 9 days	Cost of Feed	Value of Fat at 33c per Pound	Returns for $1 Paid for Feed	Profit	Loss
8	Oct. 12	980	305.1	6.42	19.59	2.33	6.47	2.77	4.14	
7	" 9	1230	452.1	3.8	17.17	2.55	5.67	2.22	3.12	
9	Sept. 25	1020	300.1	4.44	13.32	2.29	4.40	1.92	2.11	
1	" 10	810	232.3	4.94	11.48	2.04	3.81	1.87	1.77	
5	Oct. 5	1020	286.7	3.66	10.49	2.24	3.46	1.54	1.22	
6	" 8	1040	257.5	3.76	9.70	2.23	3.20	1.43	.97	
4	Sept. 15	920	177.7	3.54	6.29	2.10	2.07	.98		.03
3	" 5	1170	117.5	4.3	5.06	2.11	1.66	.79		.45
2	" 1	880	74.3	4.62	3.43	1.88	1.13	.60		.75

From the above table it will be noted that three of the cows although fresh only since September 1, 5, and 15, respectively, failed to produce enough butter fat at 33 cents per pound to pay for their feed; and their owners, in fact, had been paying from one to eight cents per day for the privilege of milking them, in addition to housing and caring for them.

Cow No. 3 was selected from a herd of Short horns, and it took a great deal of persuasion, in addition to about twenty-five dollars more than the cow was worth for beef, to induce the owner to part with her. In fact, he seriously considered having the cow shipped back to him at the end of the demonstration. Her nine-day record showed that she failed by five cents a day to pay for her feed.



The cow that made the highest profit, four dollars and fourteen cents ($4.14) for the nine days, or nearly fifty cents per day, was a cross of a pure bred Guernsey sire on a common red cow; and the one that stood second was a high grade Holstein. These two cows cost about $150 each; yet the records show that the purchase of these two cows was a very profitable investment. They made a profit of $7.28 for the nine days, while the other seven made a combined profit of only $4.84. In other words, it would take ten cows like these poor ones to make a profit equal to that of the two good cows.

This brings forth in a striking way one of the weaknesses of the methods followed by the average dairyman. He will go on keeping twelve or more cows, buying feed and worrying over the labor necessary to care for them, when he might just as well dispose of six or eight, and make as much profit from the remaining four or six—and be able to take pride in his work! What is the use of doing a big business if there is no profit in it? We might better give more attention to a smaller business and make as much profit with less expenditure of energy, time, and money invested.

This does not mean that it is more profitable to operate small dairies, but that after keeping a record of the production of each cow, every unprofitable cow should be weeded out of the herd.

These points are properly perceived only when the dairyman keeps a record of the production of each cow in the herd; and they are points to which the Dairy Division is trying continually to call the attention of all dairy farmers in the United States.

These cows were sold after the demonstration was over. The three whose records showed that they had failed to pay for their feed, although they had been milked only for a few months, were sold for beef; and the other six were purchased by a dairyman supplying milk to Chicago.

Finding the Greater Cows.

One of the most striking lessons of the dairy show recently held in Chicago was afforded by a grade cow produced by introducing a Guernsey purebred sire into a common herd. The cow was the first cross of this bull. The animal was brought to the show by the United States Government along with eight others taken from the same neighborhood in Wisconsin. It formed the demonstration herd, and was composed of two grade Jerseys, three grade Short-horns, two grade Holsteins, and two grade Guernseys. The particular cow that I am writing about is one of the most unattractive animals, when looked at from a front view, that is to be found on any farm these days. One of her horns grows straight down, the other had been broken at the root and is twisted around under the left ear until it forms an almost perfect semi-circle, but were one to cut off both horns close to the head, the animal would present a fairly attractive appearance. The other parts of her body had many of the most desirable points looked for by a man who wants to buy a good cow. There was plenty of room for her udder, and other qualities depended on to produce a paying product were in evidence. This crooked-horned animal in seven days produced nearly 20.5 per cent of the product of the entire herd. Here is what each cow produced in fat credited at the rate of 33 cents a pound, and what the feed of each animal cost during seven days:

No. 1. Produced $2.98, at a cost of $1.60. Grade Jersey.

No. 2. Produced $0.78 at a cost of $1.23. Grade Jersey.

No. 3. Produced $1.34 at a cost of $1.69. Grade Short-horn.

No. 4. Produced $1.55 at a cost of $1.60. Grade Short-horn.

No. 5. Produced $2.64 at a cost of $1.72. Grade Short-horn.

No. 6. Produced $2.47 at a cost of $1.71. Grade Holstein.

No. 7. Produced $4.30 at a cost of $2.04. Grade Holstein.

No. 8. Produced $5.01 at a cost of $1.78. Grade Guernsey.

No. 9. Produced $3.42 at a cost of $1.73. Grade Guernsey.

It is thus seen that the nine cows produced fat to the value of $24.50, and the cost of their feed was $15.10, or a profit of $9.40 in seven days. The cow that produced only 78 cents worth of fat in seven days ate up within 55 cents of as much food as did the cow that produced fat worth $5.01 within the same time. Three of the cows were fed at a loss.

NO. 5—GRADE SHORTHORN.

Five cows, more than one-half of the herd, produced in the aggregate $8.79 worth of fat at a cost of $7.95, but the crooked-horned Guernsey grade produced within $3.55 of as much fat, while her cost was $6.17 less than the five. Three cows of the herd, one of the Jerseys and two of the Short-horns, produced $3.68 worth of fat and ate up $4.52 worth of feed, while the Guernsey produced $1.33 more fat than the three and ate $2.74 less feed. These cows were all brought from one section in which an entire dairy herd is made up of the same class of stock, from which it is easy to calculate the immense losses of the men who are keeping such stock. I must state here that these figures show the first seven days of the test. There were two or three other milkings, figures of which were not available when these were obtained, but it is safe to say the same average holds out.

It is almost needless to say here that the experts made the best possible use of the figures obtained at this demonstration. Seats were built all around the animals and these were kept filled while one talker after another explained how easy it is to find out whether a cow is paying for her keep, and how it often occurs that the best lookers are little more than boarders. The most striking point seemed to be in the statement that the best cow of the herd had been obtained by simply making use of a good sire.

J. L. GRAFF.

Illinois. Rural New Yorker.

(Continued from Page 71)

program listened to by about one hundred and seventy-five. Prof. Humphrey again addressed the meeting, taking for his subject, "Leaks in Dairying." He demonstrated very clearly how profits might be lost in the management of the dairy herd and how to remedy the causes.

Mr. Carswell followed Prof. Humphrey's talk. He spoke on dairying from the creamery standpoint and emphasized the importance of producing a high grade of dairy products to compete with foreign trade. Mr. Carswell is manager of the Farmers' Creamery Company at Clear Lake and Reeve, Wisconsin, and has made the creamery business his study for several years. His talk was very instructive and much benefit derived from it. Prof. Humphrey was elected First Honorary Member of this Association, and at the business meeting the following officers were elected: Pres., J. N. Stewart; Vice-Pres., J. C. Farmer; Sec'y, E. T. Stewart; Treas., B. A. Francis; Twenty charter members are enrolled, and many others have made application to become members. Much enthusiasm is shown among members and Polk County will be heard of again as a Guernsey center.

JOS. N. STEWART.

SUMMARY OF THE REPORTS

OF

Two State Experiment Stations

ON FEEDING COWS FOR BUTTER

New Jersey Experiment Station, Report for 1889-90

MATURE COWS. TESTED NEARLY NINE MONTHS

	Avge. lbs. milk daily.	Daily Avge. butter fat.	In 300 days.		Profit.
Three Guernseys	19.10	0.97 lbs.	291 lbs. @ 25c.,	$72.75	
Cost of food per lb. of fat, in cents,			.1530	44.52	$28.23
Three Jerseys	18.45	0.90 lbs.	270 lbs. @ 25c.,	67.00	
Cost of food per lb. of fat, in cents,			.1790	48.33	18.67
Three Holsteins	24.27	0.86 lbs.	258 lbs. @ 25c.,	64.50	
Cost of food per lb. of fat, in cents,			.2240	57.79	6.71
Three Ayrshires	19.76	0.73 lbs.	219 lbs. @ 25c.,	54.75	
Cost of food per lb. of fat, in cents,			.2060	45.11	9.64
Three Short Horns	19.56	0.74 lbs.	222 lbs. @ 25c.,	55.50	
Cost of food per lb. of fat, in cents,			.2080	46.18	9.32

New York Experiment Station, 1891-92

YOUNG HEIFERS. THEIR FIRST SEASON. AVERAGE TEN MONTHS

	Avge. lbs. milk daily.	Daily Avge. butter fat.	Avge. lbs. of butter (not fat), 10 mo.		Profit.
Two Guernseys	16 00	0.90	268 lbs. @ 25c.,	$67.00	
Cost of food per lb. of butter, in cents,			.1470	39.40	$27.60
Three Jerseys	14.07	0.89	267 lbs. @ 25c.,	66.75	
Cost of food per lb. of butter, in cents,			.1670	44.58	22.17
One Holstein	22.65	0.79	241 lbs. @ 25c.,	60.25	
Cost of food per lb. of butter, in cents,			.2204	54.50	5.75
Four Ayrshires	18.40	0 61	188 lbs. @ 25c.,	47 00	
Cost of food per lb. of butter, in cents,			.2303	43.33	3.67
Two Holderness	13.40	0.52	157 lbs. @ 25c.,	39.25	
Cost of food per lb. of butter, in cents,			.2204	34.60	4.65

(Photographed at the age of 2 years, 4 months. Weight 1220 lbs.)

26241 **Prince Glenwood of Two Oaks**
Sire *Robiline's Glenwood of Two Oaks* (18822)
Dam *Annabelle of Two Oaks* (21474)
Born—March 7, 1913
Red fawn with white markings.
Breeder and owner:
George D. Eggleston, Parma, Mich.

26242 **Duke G. of Homestead**
Sire *Lawrence G. of Lima* (17078)
Dam *Goldie of Homestead* (22570)
Born—Aug. 14, 1913
Fawn with white markings.
Breeder and owner:
Henry Barthel, Cleveland, Wis.

26243 **Tennessee Lad**
Sire *Masher's Cotton Bloom* (18801)
Dam *Imp. Coker's Beauty* (32063)
Born—Aug. 22, 1913
Fawn with white markings.
Breeder and owner:
Jack Clayton, Collierville, Tenn.

26244 **Carnation's Lad of Appleton**
Sire *Imp. Flock's Head of Pulias* (11374)
Dam *Imp. Carnation of La Hougue* (31663)
Born—Nov. 2, 1912
Fawn with white markings.
Breeder and owner:
O. N. Johnson, Appleton, Wis.

26245 **Champion of Maple Terrace**
Sire *Divan Stranford* (19919)
Dam *Elsie Palmer* (21817)
Born—June 12, 1913
Light fawn with white markings.
Breeder and owner:
William W. Hurley, New Hope, Pa.

26246 **Sequel of Alfarette**
Sire *Sequel's Favorite* (19704)
Dam *Mary of Raritan* (37974)
Born—March 14, 1913
Fawn with white markings.
Breeder—George La Monte, Bound Brook, N. J.
Owner—L. D. King, Aurora, Ohio.

26247 **Newgrove George of Crab Tree**
Sire *Imp. Royal George of the Isle* (20305)
Dam *Imp. Newgrove Queen XI.* (37514)
Born—July 23, 1913
Light fawn with white markings.
Breeder and owner:
Mrs. Scott Durand, Lake Forest, Ill.

26248 **Bloom Boy 2d**
Sire *Bloom Boy* (17746)
Dam *Gypson's Queen 2d* (20193)
Born—Sept. 11, 1912
Solid fawn.
Breeder and owner:
C. W. Pace, Mondovi, Wis.

26249 **Woodrow of Rocky Branch**
Sire *King of Rocky Branch* (16521)
Dam *Rose of La Grange* (22209)
Born—March 10, 1913
Solid fawn.
Breeder and owner:
M. C. Ball, Thomasville, Ga.

26250 **Ray Stranford**
Sire *Frau's Stranford* (11413)
Dam *Vanity of Haddon* (34677)
Born—April 10, 1913
Red fawn with white markings.
Breeder and owner:
John McLeod & Son, Platteville, Wis.

Every Guernsey Breeder

SHOULD HAVE

Hoard's Dairyman.

No other publication in the world has **labored as ably or zealously for the advancement of dairying.** It is a mighty power in the dairy world for the dissemination of sound dairy practice.

No publication we could name would make a more complete or better combination with the Guernsey Monthly. **Both journals** belong on the reading table of **every man interested** in Guernseys.

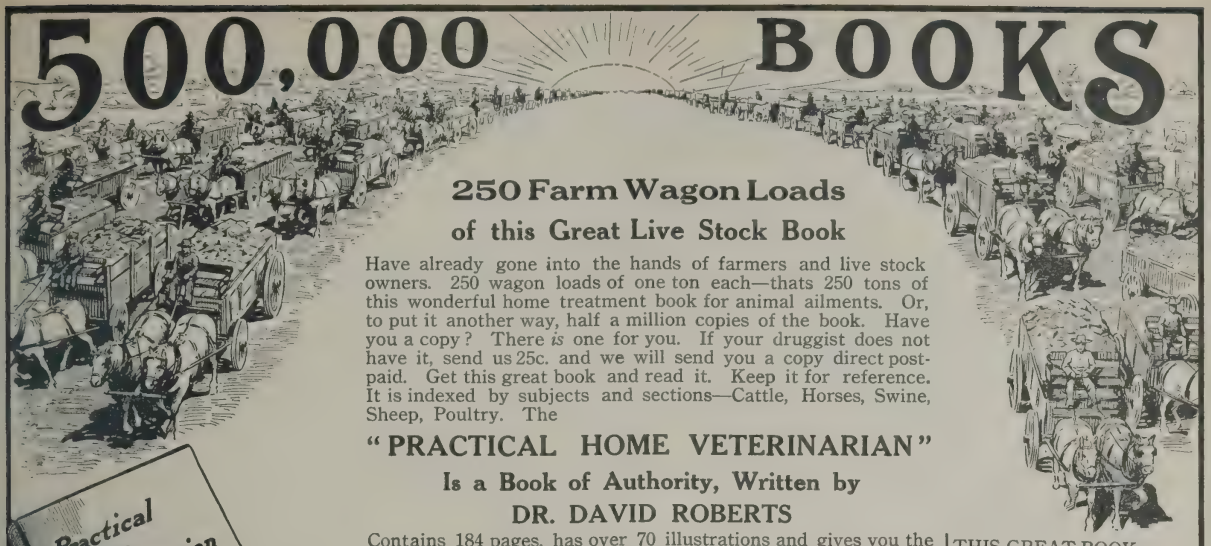
By special arrangements with the publishers, we are able to offer

GUERNSEY BREEDERS' JOURNAL

AND

HOARD'S DAIRYMAN

Both One Year for $2.65



Dont fail to take advantage of the combination. When you renew for the Guernsey Breeder's Journal do not forget to include HOARD'S DAIRYMAN.

250 Farm Wagon Loads of this Great Live Stock Book

Have already gone into the hands of farmers and live stock owners. 250 wagon loads of one ton each—thats 250 tons of this wonderful home treatment book for animal ailments. Or, to put it another way, half a million copies of the book. Have you a copy? There *is* one for you. If your druggist does not have it, send us 25c. and we will send you a copy direct postpaid. Get this great book and read it. Keep it for reference. It is indexed by subjects and sections—Cattle, Horses, Swine, Sheep, Poultry. The

"PRACTICAL HOME VETERINARIAN"

Is a Book of Authority, Written by DR. DAVID ROBERTS

Contains 184 pages, has over 70 illustrations and gives you the benefit of Dr. Roberts' life work in treating all kinds of animal ailments and diseases. Dr. Roberts' live stock specialist, writer, lecturer and official veterinarian at national live stock shows, is known the world over. His medicines and live stock prescriptions are used by veterinarians and can be secured by you at the drug store. Inquire for them when you ask for the Practical Home Veterinarian. Medicines supplied direct from laboratories at Waukesha, Wisconsin, if not at drug store.

Dr. David Roberts Veterinary Co.,
4042 Wisconsin Ave., - - Waukesha, Wis.

THIS GREAT BOOK will give you a veterinary education. Do not delay. Send 25 cents today and receive your copy direct from our laboratories

UNICORN DAIRY RATION

Cuts down the amount of grain used; lowers the cost; increases the flow of milk.

A QUALITY FEED

26 per cent. Protein, 6 per cent. Fat, 9 per cent Fibre, 50 per cent. Carbohydrate. very high in digestible protein. Write us for free copy of our book on modern methods for Milk Production.

The Agricultural Guild

Offers for sale **at moderate prices** a few bull calves **good enough to head choice herds,** and at low prices. Bulls that will improve most herds. In herds belonging to the members of the Guild are found the following bulls :

Imported Border Raider

He is a show bull of very high quality, which he impresses on his calves. He carries 27 1-2 per cent. of the blood of May Rose II.

Dairymaid's Glenwood of Pinehurst 10548

His full sister is the second highest producing cow of the breed. His three tested daughters averaged 467 pounds of fat as two-year-olds.

Imp. Pride of Day 1849 P. S.

He was a King's Cup winner on the Island. His full sister produced 583 pounds of fat as a two-year-old. His calves are uniformly good.

Stranford's Glenwood of Pinehurst VII. 17392

This bull furnishes the best combination of the Selma, Dairymaid, Stranford Princess and Glenwood blood to be found. His calves are very choice.

Besides these great bulls, our herds contain sons or grandsons of Governor of the Chene, Masher's Sequel, Galaxy's Sequel and King of the May.

With the best of bulls, and over one hundred offlcially tested cows, we are in a position to breed Guernseys intelligently.

We are Breeders, not Dealers

We offer for your selection choice young bulls backed by good records. We price them worth the money.

We veal all bull calves that are not reasonably sure to improve the dairy stock of the country. We guarantee satisfaction.

All our Herds are Tuberculin Tested

Ledyard Bay Guernseys

Young Bulls and Bull Calves for sale from cows with big records and sired by Old Faithful 14947 and Ledyard Bay 2d 19299.

Old Faithful is a large bull with good back and wel sprung ribs, giving him great feeding and dairy capacity. In breeding he is backed by the cream of the Helendale Herd.

Ledyard is full brother to Azucena's Pride 2d, holder of the following records:

12633.30 lbs. milk; 706.46 lbs. fat as a 2½ year old.
16203.90 lbs. milk; 855.70 lbs. fat as a 4 year old.
Champion Record for the class.

It is a notable fact that the sire and dam of Ledyard Bay 2d are direct descendants from such noted animals as Lord Stranford, Sheet Anchor, Rutila's Daughter, Lucretia, &c

Ledyard Bay 11074, the sire of Ledyard Bay 2d, has now eight daughters in the Advanced Register that average 520 lbs. fat, all but two with first calf. I have ten more. We wonder what they will do when tested.

Write for my Sales List and Folder.

DOYLESTOWN, PA.

Put Cork Brick Over Your Old Cement Floors

Installing Cork Brick in an old Barn

To get a satisfactory stall floor has been one of the hardest problems that the dairy cattle owner has had to solve. Dirt floors are out of the question. Wood soon gets foul and rots out. Concrete is cold, hard and slippery. Cork Brick combine the warmth and elasticity of wood with the durability and sanativeness of concrete, and besides they are never slippery—wet or dry. Remember, a single one of your valuable cows is probably worth more than it would cost to have every stall you have.

It's just as easy to install Cork Brick in an old barn as a new one. No skilled mechanics are needed. Simply roughen the surface of the concrete by chipping it, and secure a wooden curb 2 1-2 inches high along the back of the stalls with expansion bolts, in order to protect the edges of the brick.

Wet the surface of the concrete thorougly and then lay the Cork Brick in a half-inch bed of Portland cement mortar. The joints are sealed by sweeping cement grouting over the surface several times until they are completely filled up.

Our booklet, "Cork Brick Floors" gives directions for laying the brick in detail. It's free. Why not write for it today? Ask for sample too, if you would like to have it.

Cork Brick Floors Mean Comfort, Safety, Healty, Economy.

ARMSTRONG CORK COMPANY, - 119 24th Street, Pittsburgh, Pa.

THIS SILO LASTS FOR GENERATIONS

The first cost of a silo should not unduly influence you in making your selection. Good Guernseys cost more than ordinary cows—and they are worth it. Same with silos. The

NATCO IMPERISHABLE SILO

is permanent—there's no hoops to tighten—no painting—no constant repair bills. Its durability makes it the most economical silo in the end.

Weatherproof, Decayproof, Fireproof, Verminproof

But there's another important factor—it keeps ensilage fresh, sweet and palatable from silo-filling time until the last forkful of ensilage is fed—and that's what you want a silo to do.

The Natco Imperishable Silo will make an attractive addition to your buildings—**any mason can erect it.**

Write for Free Silo Book

Send today for our free book on the Natco Imperishable Silo and containing valuable articles on feeding ensilage. Ask for catalog V.

National Fire Prooting Company

Syracuse, - New York

Donald of Ellenwood 16329

One of our herd bulls, is certainly a splendid individual. His pedigree shows such individuals as Glenwood's Main Stay 6067, Mainstay 3789, Glenwood Girl 6th 9113, Sheet Anchor 2934, Manager 3393, and other famous A. R. blood. He resembles very much Old Sheet Anchor. Our other herd bull, Glenwood's Main Stay 24th 12664, who is sire to Donald, has proven himself a worthy sire.

About half of our cows have been admitted to the Advanced Registry with creditable records. Their blood traces back to such ancestors as Divan 5846, Pat of Haddon 3919, Sheet Anchor's Rutila 9170, Glenwood Boy of Haddon 4605, Glenwood's Champion 15639.

Write for price list and descriptive breeding of young bulls from A. R. cows. We are also breeders of select Berkshires. Visitors are welcome.

Molassine Meal

MADE IN ENGLAND

The Parallel Column Decides

Our Tale

A healthy stomach means increased digestive and assimilative powers

You can get better resuls from your regular high protein ration by using

Molassine Meal
MADE IN ENGLAND

3 lbs. of Molassine Meal with 9 lbs. of Protein Ration will produce more than 12 lbs. of Protein Ration.

Why ?

Because no other feed in the world possesses these peculiar antiseptic and digestive properties. It is absolutely different from any other feed.

Unique--Distinctive--Superior

The Cows Tale

FERNDALE FARM

F. H. POPE, Manager

MILK AND CREAM

Breeders of Guernsey and The Improved Ayrshire Cattle.

Choice family Cows for Sale at All Times.

All Stock Tuberculin Tested.

Auburndale, Mass.

Gentlemen:

I want to tell you that the **Molassine Meal** that I bought through the J. Cushing Co. of Weston, and commenced to feed some two months ago **has proved to be the best feed I have ever used. It certainly has produced wonderful results to everything I have fed it to,** which includes our cows, calves, and horses. **Each one of our horses has gained more than fifty pounds,** and it has given them the slickest coat they have ever worn. It certainly has put the bloom on to the cows and calves, and **our cows never kept up so well in their milk supply as they have this spring, but I can see why,– for it keeps their system in the pink of condition.**

Yours very truly,
(Signed) FRANK H. POPE,
Manager.

Its antiseptic properties free the stomach and intestines from worms or bacteria, thus **enabling your animal to get full value from its food**

FOR ALL FARM STOCK

Feed 1-4 Molassine Meal, 3-4 regular ration to get the best results.

Free Barn Plan Service

For Those Who Expect to Build or Remodel

Every dairyman wants a good barn—and every dairyman realizes that the goodness of a barn is assured by the provisions made for sanitation, cleaning, feeding, etc., in every way possible insuring the health and comfort of the cows.

For years Mr. James and his assistants, of the James Mfg. Co., makers of James Sanitary Stalls, Stanchions, Pens, Manure Carriers, Feed Carriers, etc., have made a careful study of barns, not only how they should be equipped and how they should be constructed, but how they should be lighted, ventilated and drained—how they should be designed and arranged to be most profitable to the owners.

To any who are intending to build or remodel or make alterations in their barns, we offer the benefit of our special knowledge and experience free of cost and without obligation, excepting that we make a nominal charge to cover the cost of materials, preparation and mailing of blue-prints and specifications.

James Sanitary Barn Equipment

Has made better work, easier and more profitable work possible for hundreds of the best dairymen in America. Even if you do not expect to build or remodel right away, we invite you to learn about James Free Barn Plan Service in order that you may have this valuable information in mind when you do decide to begin work.

Write us today, submitting your ideas or telling us your problem. We may be able to make suggestions that will save you money and make you money, just as we have for many of your brother dairymen, farmers and breeders.

There are numerous features that make James Sanitary Barn Equipment supreme in its field. Get our free Catalogue No. 10, describing James Stalls and Stanchions, showing how all the cows are lined up evenly over the gutter, so no manure is in the stall on the bedding or on the cows; how cows are prevented from nosing feed out of the manger; how they are prevented from stealing one another's feed, how abortion, ruined udders tuberculosis and various cow ailments are prevented. Also ask for free catalog No. 11, describing James Manure Carriers and Feed Carriers.

Barn Building Book FREE

Tells about the sanitary housing of dairy cows. Shows the most convenient arrangement of the dairy barn, explains the fundamentals of correct construction and gives proper dimensions; gives information regarding lighting, ventilation concrete floors and their construction; information regarding site, appearance, design, drainage and inside equipment.

This book sent to you free—provided you answer the questions that appear in the box at the opposite corner of this page. Please fill in these answers, return to us, and the book will be forwarded at once.

Florham Farms Guernsey Herd

OFFERING OF IMPORTED GUERNSEYS

My recent importation consisted in large part of heifers not bred. A selection of twenty-five can now be offered that are safely in calf to the undermentioned.

MAY ROSE BULLS

and the resulting progeny should prove highly desirable since heifers and service bulls alike, are of the most popular breeding

Imp. Itchen May King 25174

SIRE—Imp. Itchen Red Raider 27342, by Imp. Moss Raider 22155 out of a full sister to Imp. May Rose King.

DAM—Itchen Verbena 5501 E. G. H. B. by May Day 1132 E. G. H. B., who sired the renowned Itchen Daisy III 15630.

This young bull is a superb individual—a worthy son of a famous sire and his extended pedigree shows five crosses of May Rose blood, through the best channels.

For further information address,

Don Bernardo of Linda Vista 20617

SIRE—Jethro's May King of Linda Vista 14591, own brother to Rose of Langwater 24204 (King of the May-Hayes Rosie) who holds third place in Class F. with record of 12966.50 lbs. milk—669.89 lbs. fat and third place in Class D. with record of 15008.20 lbs. milk—751.62 lbs. fat.

DAM—Rutila's May Rose 24946 who holds fifth place in Class E with record of 11415.75 lbs. milk—655.93 lbs. fat by Imp. May Rose King 8336.

This cow with her dam and grandam were the three best cows bearing this relationship, that I have ever known.

Langwater Guernseys Are Producers

LANGWATER Dorothy 27944, has established a **precedent** for the cows of the Guernsey breed by making a record of 16099.7 lbs. milk and 781.51 lbs. fat as a three and one-half year old and **carrying** her **calf** seven months while doing so.

This is not only the highest record of the breed for a cow carrying her calf this length of time while on test, but it places Langwater Dorothy seventh among the Advanced Register cows of the breed as a milk producer. Langwater Dorothy is a daughter of King of the May and stands first in milk production and second in butter fat among his daughters.

Langwater Dorothy 27944

2 year old record: 13022.7 lbs. milk; 649.78 lbs. fat.
3 1-2 year old record: 16099.7 lbs. milk; 781.51 lbs. fat.

Coming Guernsey Events

Western Guernsey Breeders' Association, Madison, Wis., Feb. 6, 1914.

Esatern Guernsey Breeders' Association, Philadelphia, Pa., Feb. 20, 1914.

Meeting and Lunch, Guernsey Club of Boston, Young's Hotel, Boston, Mass., Feb. 25, 1914.

Formation New Hampshire Guernsey Club, Concord, N. H., Feb. 12, 1914.

It is generally conceded that there are always some special and distinguishing characteristics of each breed of Live Stock. As we go back in the history of the Guernsey, we find her spoken of in the early annals of the Island as "The Old-Time Yellow and White Cow," the Farmer's Dairy Cow. It is evident that her early admirers regarded her ability to produce dairy products as her chief asset. It appears during the years of breed development, that wherever the breed has been referred to, it has been from the standpoint of the production of dairy products.

It is not to be wondered that even at the present time the capabilities of the Guernsey are properly measured by the excellent work she is doing in the Advanced Register.

It is interesting to note in this connection that during the last nine months,out of 510 records that have been completed, we find that 106 have exceeded 11077 lbs. of milk, and 13 have exceeded 725 lbs. of butter fat.

For sometime it will be found the general average of the records for the Advanced Register has been showing a greater milk and butter yield, as well as a stronger percentage of butter fat. Let us hope this good work continues.

The records for December show that Jehanna Chene 30889, owned by Mr. O. C. Barber, Anna Dean Farm, Barberton, Ohio, has to her credit for 365 days 16287.70 lbs. milk and 862.53 lbs. butter-fat. This would entitle her to go to the head of Class E. As she is doing better work at the end of her twelvth month than during her first, her record is to be continued through the month of January.

This cow is a daughter of Imp. Governor I of the Chene 10563, A. R., who has already had eleven daughters admitted to the Advanced Register. We note especially another of his daughters, Julie of the Chene 30460, about to complete her record with 15416.80 lbs. milk and 796.85 lbs. butter-fat. This will stamp this bull as one of the very greatest sires of the breed.

The dam of Jehanna Chene 30889, namely Pauline Spotswood 30446, is also among the prominent members of the Anna Dean herd.

Membership

The following are the additions and changes in the list of Members of the Club since the annual meeting in May.

The deaths of Dr. Chas. McBurney, Stockbridge, Mass., and Mr. Geo. LaMonte, Boundbrook, N. J., have been reported.

Mr. Wm. H. Farmer, Mont Clair, N. J., resigned December 20.

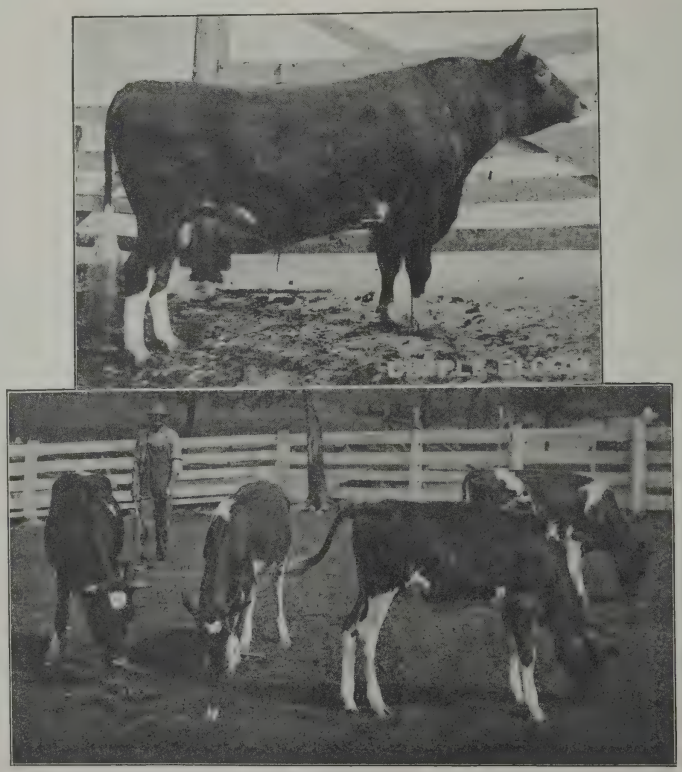
A Book on Guernseys

Mr. Charles L. Hill of Rosendale, Wis., is preparing a book on Guernseys, and asks breeders' attention to the following:

"I am anxious to secure good photographs of any Guernseys not heretofore published, and if people who have such photographs will loan them to me, I will see that they are returned in good order. If of interest to Guernsey breeders at large, I may want to use them in a book I am writing of the Guernsey breed. Should also be glad to know of any weekly butter records not hitherto published by The American Guernsey Cattle Club. If any breeder happens to know what was the first pure bred Guernsey going into any state, I should be glad if they will write me concerning it."

Edgemont Herd of Guernseys

Owned by T. E. Hyde, Bloomsburg, Pa.



View of Edgemont Farm and Herd looking east

"FATHER of the Guernsey movement in Columbia County." Such is the eminent position that Mr. T. E. Hyde holds, from his firm devotion to the interests of the Guernsey.

Some ten years ago Mr. Hyde started Breeding Guernseys on a farm of 160 acres, all tillable, situtated in Columbia County, about five miles from Bloomsburg in the beautiful and fertile Dutch Valley. This is one of the best agricultural sections in the state of Pennsylvania. The country thereabouts is rolling and the scenery most picturesque. The buildings on this farm are commodious, cow stable is modern, and constructed on best sanitary lines, with the most modern equipment and everything necessary for breeding and developing of pure bred stock. Concrete floors and mangers, iron stanchions. The ceiling of the barn is light, everything is painted white which makes all look clean, neat and attractive.

Not content with but the one farm, Mr. Hyde has recently added two more with a total acreage of 260. The main barn has a tie-up of fifty head. Water is supplied on each farm from springs which run into the barns by gravity. The main farm has its own lighting system, carrying seventy-five lamps. Mr. Hyde has partially solved the labor question by installing a three unit milking machine which he has found to be absolutely reliable. Cream is separated and sold for the manufacture of ice cream in Bloomsburg and surrounding cities.

Dimple Bloom 14369 and four of his daughters.

There are three large silos on the main farm, 12 x 30 ft., 15 x 32 ft., and the third, 18 x 36 ft. This one was completed last summer to furnish summer silage.

Mr. Hyde feeds soiling crops, and is a firm believer in Alfalfa, having forty five acres planted from which he has had four and five cuttings. Sweet clover is abundant in that section, inoculation of the soil not being necessary. Lime deposits are plenti-

ful, and are used to good advantage. The following are the soiling crops used: rye, alfalfa, oats, peas and corn. In the winter he feeds mixed hay, corn silage, sucrene, Union Grains, gluten, cotton-seed meal and oil meal.

As stated above, the herd was started about ten years ago with the purchase of six cows and one bull, and now numbers one hundred head, with some sixty of them milking.

The blood lines of the herd were not closely related, it having been founded on individuals and their production.

The herd bull is Dimple Bloom 14369, born October 1, 1908. His sire is Imp. Yeoman 8618, sire of Dolly Dimple; and his dam is Langwater Dolly Dollars 21322, a daughter of Imp. King of the May 9001, out of Langwater Dolly Bloom 22136. Thus it will be seen that the May Rose and Dolly Dimple blood lines are becoming prominent.

Dimple Bloom is of large masculine type with a wonderful richness of skin. He is straight, long and level of the rump, and fine of limb, good withers and deep heart.

From the milking herd we find Gay Girl 18344, born July 19, 1904, sired by Sir King 7174, out of Imp. Gaiety of the Isle 15256. Gay Girl is a fine, clean cut animal, with a splendid udder covered with veins which indicate large production.

View of Edgemont Farm looking West.

Fenella Fern 20334, born October 1, 1905, has a record of 8222 lbs. milk and 405 lbs. butter fat. The sire of Fenella Fern is King Edward of Fairview 8204, who has eight daughters in the A. R. with another daughter who has progeny eligible to the A. R. Her dam is Fenella of Fernwood 16030.

Maxine Elliot 2d 16461, born May 27, 1900, A. R. 889, has been credited with 9043 lbs. milk and 500 lbs. butter fat, which had an average test of 5.53% fat. She is a fine large cow with good dairy conformation, large, well placed udder, and is very easy to handle. Her sire is Millionaire 4955, out of Maxine Elliot, Sheet Anchor 2934, sire of Millionaire, has 33 registered daughters, four of whom have been admitted to the A. R., 40 registered sons of whom six have been admitted to the A. R.

Residence of T. E. Hyde.

Redie Patterson 2d 28283, born April 3, 1906, was sired by Wide Awake's Choice 9274, out of Redie Patterson 24124. Redie is a large animal with a wonderful udder development. Her hip bones are high and from her shoulders back show the qualities of a great dairy cow.

Space will not permit description of all individuals, but in this herd is represented most of the popular strains, and generally carrying good dairy conformation and rather more size than is often seen.

One interesting feature that makes a visit to this farm of value to practical dairymen is that it has been conducted on business principles from the first. Starting in a small way, this herd has grown by breeding and purchase to what is now a fine large herd and a large part of the increase has been made from the profits of this successfully conducted Guernsey farm.

For years Mr. Hyde has been urging the farmers of Columbia County to join with him in making that county a real Guernsey centre. Many herds have been started and more are starting in that vicinity, and the people are ready to give credit to Mr. Hyde for his untiring efforts.—R.

The Relative Worth of Advanced Registry Records

Based Upon Two Years' Work of the Glenburnie Herd.

By Dr. James E. Russell, Peekskill, N. Y.

IN the April, 1913, number of the GUERNSEY BREEDERS' JOURNAL, I gave an account of the production and expenses of my herd from the beginning of advanced registry work in 1911 until the end of December, 1912. The question was raised of the value of an advanced registry record when it is known that for a considerable part of the year following the cow is dry or giving a small amount of milk. I suggested that the second year's record should be available to check up the production of the first year. The average production of the two years, it was intimated, would give a better idea of a cow's capacity than the advanced registry record taken alone.

I have kept the second year's record of eight of my cows, all that I own of the original lot which have completed a full two years' period. The table following shows (1) their age in years at the time of beginning the two years' record, (2) the date of beginning advanced registry work, (3) the length of the first lactation period, i.e. the period elapsing between dropping one calf and the next one, (4) the number of pounds of milk in the year immediately following the beginning of the test, (5) the number of pounds of milk produced from the 13th to the 24th month, and (6) the average annual production of milk in the two years:—

PRODUCTION DURING TWO CALENDAR YEARS.

	Age in Years	Date of Beginning Record	Length of first lactation Period.	Milk. lbs. 1st to 12th months	Milk lbs. 13th to 24th months.	Average Annual Production
Indian Belle 22275	5	Sept. 1, 1911	18 months.	11797.2	7,988.2*	9,892.7
Brightness 30742	2	Sept. 17, 1911	18 mos. 3 days	10,080.0	9,693.7	9,886.8
Cayuga Belle 29774	2	Sept. 17, 1911	17 mos. 18 days	9,820.6	9,030.8**	9,425.7
Glenellen 24984	3	Sept. 21, 1911	21 months	9,431.0	7,069.4	8,250.2
Imp. Granny 34947	2½	Oct. 1, 1911	16 mos. 29 days	9,081.8	8,923.5***	9,002.7
Oneida Belle 24985	3	Oct. 11, 1911	17 months	11,183.3	10,663.6	10,923.5
Masher's Elsie 24986	3	Dec. 15, 1911	18 months	14,458.8	9,194.0*	11,826.4
Golden Elsie 23744	4	Dec. 29, 1911	18 mos. 11 days	15,082.3	10,593.7	12,838.0
			Total	80,935.0	74,156.9	
					Decrease 8.3%	

* Not under A. R. Test.
** Under A. R. Test 113 days only.
*** Under A. R. Test 111 days only.

It will be noted that these cows were bred about three and one-half months before the end of the first year. Glenellen lost her calf at four months, thus throwing over her second year's record to December 31. The figures given in other cases are for two full calendar years from the beginning of the test. The actual loss in production in the second year, as compared with the A. R. record, is 8.3%. The figures speak for themselves.

From the standpoint of the dairyman, however, these figures do not determine what might have been lost or gained had these cows been bred to freshen at the end of the first year. They are all, with one exception heifers that might be expected to show a positive gain the second year. For the sake of comparison, I have tabulated the milk production of these eight cows in each lactation period up to the end of December, 1913. The same number of days are used in each case. First, I give the comparative record of cows under the official A. R. test in each year. Two of them, Cayuga Belle and Granny, were taken out of the second year's test on July 1 in order to compare their ability under the best conditions that I could give with their performance under ordinary farm conditions. Granny was bred to freshen within the year and was dried up early in December. Cayuga Belle will freshen again in April. The others have been fed and cared for as they were the first year.

Record of Production in two Successive Lactation Periods
All Cows under A. R. Test in both Years.

	Days	Milk, lbs. 1912	Milk lbs. 1913	Increase
Golden Elsie 23744	184	8,821.0	9,066.5	2.9%
Glenellen 24984	112	4,074.0	4.868.0	19.7%
Oneida Belle 24985	285	9,644.0	11,533.8	19.5%
Brightness 30742	285	8,180.2	11,268.1	37.6%
Cayuga Belle 29774	113	2,978.7	5,102.1	71.3%
Granny 34947	111	3,300.5	5,118.8	55.1%
		36,998.4	46,970.7	27%

This table shows that there has been a decided increase in the second year over the first year, but it is not probable that the showing of Cayuga Belle and Granny would have been maintained at the same high level had they been kept under test. While the average increase has been 27% to January 1, I look for considerable falling off in the later months. My guess on the heifers i that the second year should show an increase of about 15%.

Now compare this table with the following one in which the first two cows were not put under the test at all in 1913, and the latter two taken out on July 1. Indian Belle and Granny were dry practically all of December, preparatory to freshening in January. They have had a grain ration of six to ten pounds a day with about two pounds of beet pulp when not on grass. They have been in pasture day and night

all summer and had a little green feed late in the season. I have purposely let them run easily in order to see if it would have any beneficial effects on their records next year.

Record of Production in two Successive Lactation Periods.
Cows not under A. R. test in 1913.

	Days	Milk, lbs. 1912	Milk lbs. 1913	Increase
Indian Belle 22275	285	9,840.5	9,260.6	−5.8%
Masher's Elsie 24986	199	9,039.1	7,668.7	−15.1%
Cayuga Belle 29774	184	4.857,1	5,589.8	15.0%
Granny 34947	153	3,732.8	3,843.2	2.7%
Total		27,469.5	26,362.3	−4.0%

It should be borne in mind that this table compares the A. R. record of one year with the production of the correspond ing time in the next lactation period. The only significant fact is that the older the cow the less the variation. Our A. R. rules provide for an increase in butter fat of 14.6% for cows from two to three years of age, 12.7% from three to four years, 11.3% from four to five years and 10.1% from five to six years. The time may come when we shall have data enough to test the validity of this progression; perhaps we have enough now if it were worked over by an expert statistician. But until we do know the normal increase of production from year to year it is idel to speculate on what should be expected from the average cow.

My figures do not answer the question which I put a year ago. They indicate merely a rough-and-ready rule for estimating the practical value for an A. R. record. I will state it in this way: If you want to reduce an A. R. record to the production of ten months for a cow that is bred to freshen within the year, substract the production the production of the last two months of the A. R. record and deduct 10% from the remainder. By this rule Indian Belle with an A. R. record of 11,797.2 lbs. milk and 490.92 lbs. butter fat should make in ten months under ordinary card 9235.7 lbs. milk and 385.53 lbs. fat, and Masher's Elsie with an A. R. record of 14458.7 lbs. milk and 745.75 lbs. fat should make 11553.8 lbs. milk and 596.13 lbs. fat. These estimated records for ten months are in fact very close to their actual performance for this year. If such records were kept of 100 cows, we might come nearer the turth.

One other factor enters here which is hard to estimate. I have notice in all my cows a tendency to test higher in percentage of butter fat when working under ordinary farm conditions. This is probably due to the lower milk yield, but it has an appreciable effect on the ten months' record.

Another element to be taken into account is the decreased cost of the output under ordinary conditions. For example, butter fat from my test cows costs me for feed 24 cents a pound but from cows not under test the feed-cost is 18.3 cents a pound. In other words the actual profit from sales comes wholly from the ordinary yield; the extra yield under the A. R. test costs its entire value.

It follows, therefore, that the returns from A. R. testing must come form other sources. One such source is the increased valuation of an A. R. cow and the elimination of poor working animals. But to my mind the greatest return of all comes in the fixing in cows under test permanent habits of consuming large amounts of feed and of persistency in milk flow. These qualities are valuable whether a cow is milked ten months or twelve months. Like other habits, the native predisposition is not enough to develop them; they must be acquired by practice.

The capacity to turn large amounts of feed into milk and butter fat and persistency in milking are qualities which every breeder seeks to cultivate and perpetuate. They are the foundations on which the breeder of dairy cattle builds. 'Until the discovery of the Babcock test, there was no convenient way of getting at the production of butter fat and few breeders deemed it worth while to keep records of milk production when it was not known whether the milk of one cow was better than that of another. But when both milk and butter fat could be accurately recorded the plan of advanced registry testing was soon evolved. The results of one decade's work already show more promise of advance in dairy breeding than the experience of a century preceding. For the first time we have singled out those qualities which count for most and are in a position to breed, not in haphazard fashion, but in such a way as to promote advance. Until these qualities were singled out and reduced to a scientific basis, breeders depended upon visual signs. What they would see in a cow, or infer from feeling her, were the sources of their judgment in breeding. I do not deny that some men can see more in a cow than others, but I doubt if any man can see 18,000 lbs. of milk rather than 16,000 or 14000. One might discriminate between the 6,000 lb. cow and the 16,000 lb. cow but progress calls for sharper discrimination than that. Every little helps. While there may be many lapses due to reversion and the dominance of untested qualities, the chances are all favorable to greater success from mating animals of approved productive ancestry than in breeding merely according to visual signs. Mendle's law assures us that one-fourth of the progeny of a pair will be recessive and that three-fourths may be. The same law encourages us to believe, however, that by proper mating desired qualities may be permanently fixed. In the dairy world we wish to perpetuate the qualities of large milk production. The first step is to single out animals that show these qualities, and given plenty of them someone will be fortunate enough to build up a strain in which these qualities will be dominant.

In conclusion, I wish to say a word about some recent criticisms of advanced registry requirements. I have always inclined to the belief that it would have been better if the records were restricted to the first ten months of a lactation period. Surely ten months is time enough to discover a cow's capacity to consume feed, and to demonstrate her ability to produce milk and butter fat at a profit. But now that we have some thousands of records completed on the year's basis and inasmuch as the other breeders' associations have followed our lead, I do not see how we can change. No great harm can be done at any rate. Even if there were no such obligation I should want to keep every heifer of mine at her best for the first year anyway and probably for two or three years. The craze for records need disturb no real breeder. If the desire to win outweighs all other considerations, the man who has it is a gambler in cows not a breeder. Such a man will gamble in something—if not in cows, then horses or cards or the stock market. The real breeder will seek first the welfare of his animals; everything else is secondary.

The welfare of a heifer, it seems to me, requires that she be fed generously during her early lactation periods and that she milk persistently for at least twelve months the first year, decreasing in subsequent years till at maturity it may be ten months. This raises the question of when she shall be bred. The idea seems to prevail that a cow—any cow! should drop a calf every year. Proposals have been made in our club to penalize every record that does not show the cow to have been in calf four or five months. The more I think about it, the less I favor any such procedure. I don't want my heifers to have a calf every year. First I want them to milk straightaway for twelve months; then I want them to have two months to taper off in,, and then two months dry. After a years' hard work four or five months are not too much to devote to growth and recreation. If one's main purpose were to get the most milk at the least cost from a cow the first three years my plan could not be recommended. But a cow should be profitable for ten or twelve years, and I confidently

expect my heifers that are reared carefully, fed generously and worked hard with suitable periods of rest during the first three or four years, will give me a greater profit in their life time than if I were to exact the last pound of flesh at the beginning.

Moreover, the perpetuation of the power to produce milk depends primarily upon giving to the calf a strong physical constitution. Some think that a heifer's calf is not as promising as the calf from a mature cow. While it may be impossible to prove the truth or falsity of such a belief, it seems to me reasonable that unless a cow has the strength to withstand the drain of pregnancy, the calf will suffer the consequences. The best cow in my herd was dropped by a two-year old heifer and began her A. R. record the day she was two years old. It strikes me as little less than folly to propose that she be bred to freshen within the year. I gave her six months, two months dry, to rest and grow in after she finished her first year's work. The result is that she is big and strong and capable of making another record. Her calf weighed 84 lbs. at birth and asks no odds of any Guernsey however mature the dam. The whole matter in my opinion, resolves itself into this: Let the breeder preserve the health of his animals at any cost while working them up to their limit. The demand for a calf every year from young cows illustrates the truth of the maxim—"penny wise, pound foolish."

Where to Sell Guernseys

By JOHN Y. BEATY

THE man who has surplus Guernseys to sell realizes that he must advertise,but there are many who do not know exactly where it is best to place the advertisement.

The development of Guernsey breeding has been very rapid during the past few years, and by the co-operation of the American Guernsey Breeders Association, the Agricultural Colleges in the different states, and the United States Department of Agriculture, Guernseys have rapidly pushed their way into much new territory, until now there are few states that do not have several enthusiastic Guernsey breeders.

This work of developing, however, is still under way and in as much as it is rather expensive, it is much more economical for the individual breeder to leave the work of development to the agencies already in the field, rather than to attempt to develop a new territory himself.

In other words, it is reasonable to suppose (and the experience of breeders proves) that it is always money wasted to advertise Guernseys in those states where there are only two or three breeders at present.

There are two distinctive markets for pure bred Guernsey cattle. One includes those men who are already breeding Guernseys, the other includes those men who are practical dairymen, but who do not have pure bred stock of any kind.

To determine the location of men of the first class, it is necessary to go through the Guernsey herd books and locate the number of breeders in each state. To determine the men of the second class, it is only necessary to examine the map which has been made as the result of the recent census and which shows the number of dairy cattle in each state. Herewith is a reproduction of this map.

Naturally if you are advertising primarily in those states where there are few Guernsey breeders, you would need to appeal to those dairymen who do not have pure bred stock. Your advertisement would then very probably contain some of the most potent reasons why Guernseys and pure bred Guernseys are best for dairying.

In determining the territory in which to run such an ad, you would use the accompanying map and select those states where there are the most dairy cattle. The black circles indicate the presence of 200,000 dairy cows. A circle that is one-quarter white indicates from 150,000 to 200,000 dairy cows. A circle that is half white indicates 100,000 to 150,000 dairy cows. A circle three-quarters white indicates from 50,000 to 100,000 dairy cows and one that is all white indicates less than 50,000 dairy cows. Although this map may not be entirely accurate for conditions in 1914, it is relatively accurate and contains the relative number of dairy cows in the different states.

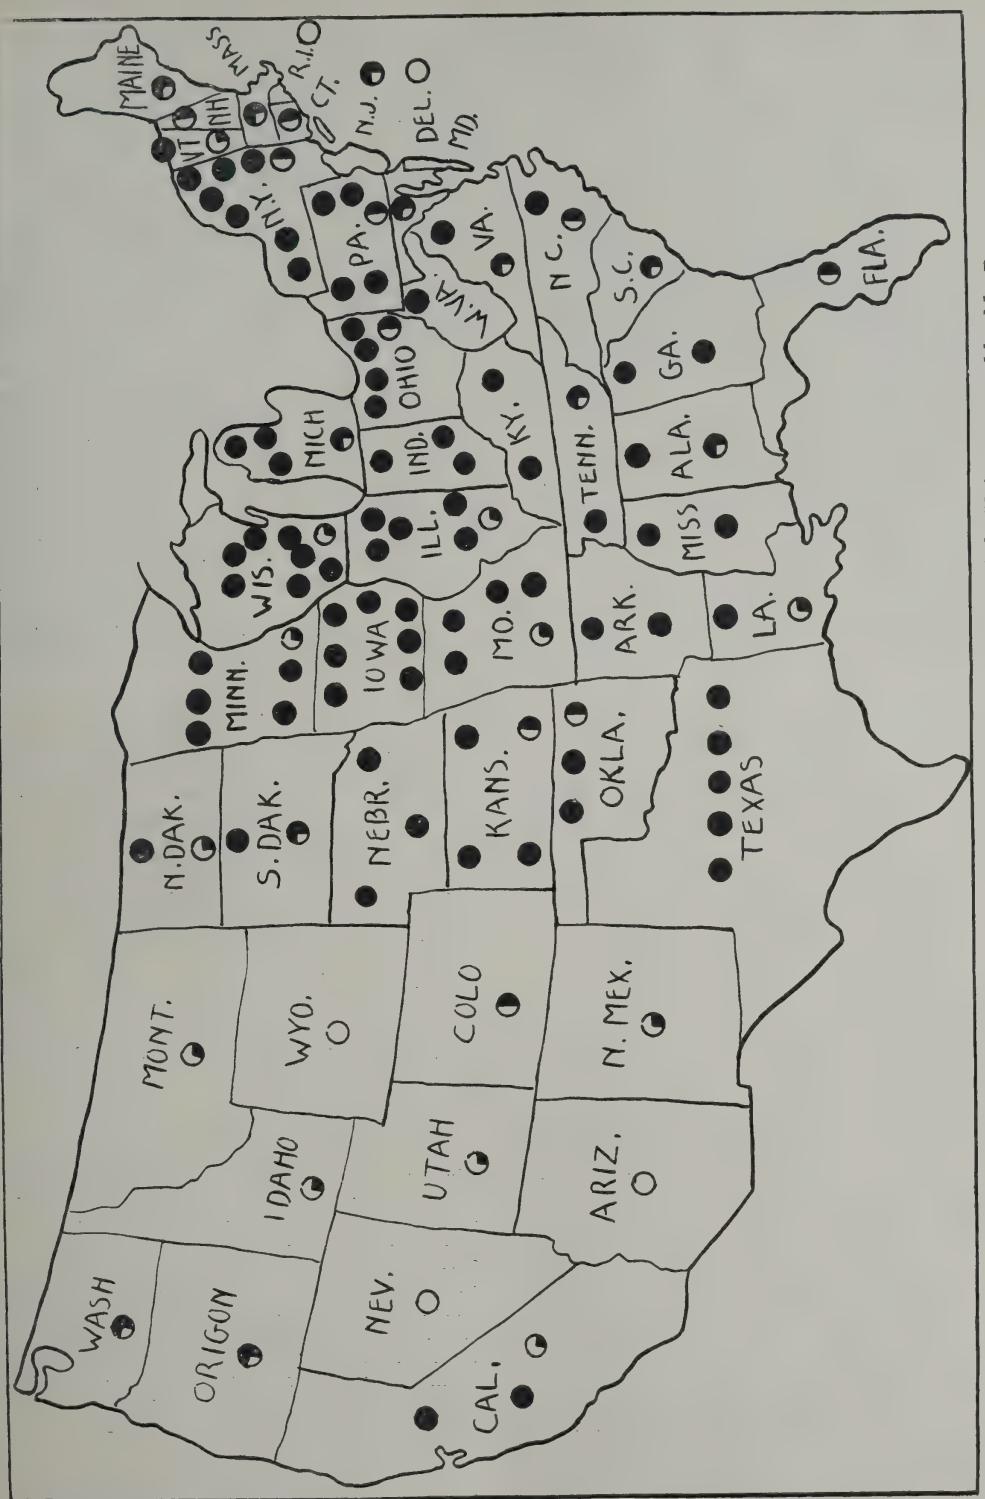
We Guernsey breeders are very fortunate in having a medium which absolutely covers that class of dairymen which are most likely to buy some of our surplus stock. The Guernsey Breeders' Journal goes to all breeders of the pure bred Guernsey cattle in whatever state they may be located and in addition goes to many other persons who would like to own Guernsey cattle. So by advertising in the breed organ we can reach all of the one class and part of the other class.

In order to reach more thoroughly that class of farmers that includes those who are not now breeding Guernseys, it will be necessary to use space in some farm papers in those sections where there is the most interest in dairying.

Lists of these farm papers can be found in your local newspaper office. N. W. Ayer & Son's Advertising agency, of Philadelphia, publishes a large book known as the American Newspaper Annual and Directory, in which is quite a complete list of the farm papers in all parts of the United States.

By consulting this you will be able to pick out those papers published in the states you wish to cover. There are many papers, of course, that cover not only the state in which they are published, but certain adjoining states, and a few cover the entire United States.

Relatively speaking, however, the paper that covers the largest territory is the poorest paper in which to advertise live stock. This is due to two things—in the first place, advertising rates are so much higher in such papers that the cost is prohibitive, and in the second place, even if the rates were lower, there are usually comparatively few circulating in any one section.



There are many good State farm papers that cover a given territory and cover it thoroughly. These can be found in the newspaper directory. Before placing your advertisement with an unknown paper, however, you should secure sample copies and examine the advertising pages carefully to see if other Guernsey breeders are using them.

Of course, the presence of Guernsey ads is not definite proof that the paper is bringing in results, but at least it is an indication. If you wish, you might write to some of the advertisers and inquire about their results.

Another thing you should do is to inquire from the advertising manager as to the number of circulation in each of the states covered. If you get figures of this kind from several different papers and place them side by side, you will then be able to select those which will probably be of the greatest advantage in your advertising campaign.

Remember this: it is not always the fault of the paper if you get poor results from your advertising. You may have written a poor advertisement, or you may have selected a paper that does not cover the territory where there is most

(Continued on Page 27.)

This map shows the relative number of Dairy Cattle in the different states of the Union, prepared by Mr. Beaty.

The Effects of Price on the Rank of Cows in Individual Tests

By Dr. Eugene Davenport, University of Illinois

WHEN a butter contest is to be arranged between individual animals or between breeds, it has commonly been assumed that the price agreed upon for butter and for feed is as fair for one as for another, and that it has no bearing upon the ranking of the cows at the end of the test. Every statistitian knows that this is wrong, and that the same mistake is frequently made by experiment station people in reporting results of feeding tests as has been made by those conducting competitive dairy contests.

In order to bring out the point involved, the records of three cows in a recent notable contest of this kind have been selected, and the actual figures have been transcribed with no changes except that unimportant fractions have been dropped for the sake of simplicity and the cows have been designated by letters instead of by numbers as they were known in the contest.

Table 1.—Rank of Cows with Butter at 25 Cents per Pound.

Cow	Butter,lbs.	Value	Cost of Feed	Profit	Rank
A	330	$ 82.50	$32.00	$50.50	1
B	300	75.00	29.00	46.00	2
C	330	82.50	37.00	45.50	3

Table 1 gives the amount of butter produced by each, its value when reckoned at 25 cents per pound,the amount agreed upon in the actual contest, the cost of feed consumed by each cow, the profit arising from each, and the consequent rank of the cows based on profit. A produced 330 pounds of butter and stood first; B stood second with 300 pounds; C stood third with 330 pounds.

It will be noted in this instance that A and C produced the same amount of butter, but that C was inferior, even to B, which produced 30 pounds less, because she was a large consumer of feed and for no other reason.

Table 2.—Rank of Cows with Butter at 40 Cents per Pound.

Cow	Butter,lbs.	Value	Cost of Feed	Profit	Rank
A	330	$132.00	$32.00	$100.00	1
B	300	120.00	29.00	91.00	3
C	330	132.00	37.00	95.00	2

In Table 2, the figures are recast reckoning butter at 40 cents a pound, or about its present price. The price of feed is unchanged. This table shows $100 profit for A, $91 for B, and $95 for C; thus it appears that C now outranks B, not because of any feeding quality, but because the price of butter has risen in the market.

Table 3.—Rank of Cows with Butter at 10 cents per Pound.

Cow	Butter, lbs.	Value	Cost of Feed	Profit	Rank
A	330	$33.00	$32.00	$1.00	1
B	300	30.00	29.00	1.00	1
C	330	33.00	37.00	-4.00	2

In Table 3, the figures are again recast with butter at 10 cents a pound, whereby it appears that cows A and B are equally efficient, showing a net profit of $1 apiece, whereas C is now second in rank with a loss of $4.

But it is not true that A and B are equally efficient when measured by proper standards, for by still further juggling prices we can make it appear that B is a more economical cow than A, as seen in Table 4, where butter is figured at 10 cents a pound and the price of feed is doubled. In this case all of the cows lost money,—but B least of all.

Table 4.—Rank of Cows with Butter at 10 Cents per Pound and Feed at Double Price.

Cow	Butter,lbs.	Value	Cost of Feed	Profit	Rank
A	330	$33.00	$64.00	-$31.00	2
B	300	30.00	58.00	-28.00	1
C	330	33.00	74.00	-41.00	3

For the sake of simplicity, I have confined this study to 3 animals, and most of the changes have been made through different reckonings on the price of butter; if a longer list should be taken and the price of butter and feed should both be altered, the cows could be made to assume almost any ranking at will; indeed, I remember that in the World's Fair contest at Chicago it was easily possible to bring the 19th cow on the list to first rank without making the prices absurd.

The principle involved is, of course, that the moment values are fixed the real question in all feeding tests is obscured. That question is this, How much butter or meat can an animal manufacture out of a given amount of feed? That is the only question involving the efficiency of the animals, and that question is entirely independent of the price, either of the butter produced or of the feed consumed.

There is reported in the records of an experiment station of this country a notable experiment in sheep feeding, in which native and Mexican lambs were fed in order to determine which was the more profitable. The experiment was so conducted that each lot of animals was charged with its own cost, the value of the feed consumed figured at market prices at that time, and all other expenses incident to the test. In reporting the experiment it appeared that one of the lots was somewhat superior to the other, but an analysis of the actual data shows that this superiority lay only in the fact that in shipping to market it was impossible to secure two double-deck cars, so that one lot went in a double-deck car and the other in two single-deck cars at considerably increased expense. It was this element in the experiment and not differences in feeding quality that threw the results in favor of the other lot.

The question of the price of a product or of the cost of feed is a question for the farmer to deal with every time prices change. It is a strictly commercial proposition and may influence at any time his choice of animals or of methods of feeding; but the question as to what an individual can do with feed in the way of manufacturing animal products, is, of course, purely a physiological one and independent of price. In all experiments, the investigation should attempt to determine this ratio between feed and animal product, leaving to the individual the problem of determining his choice in accordance with prevailing prices at the time, because in all feeding experiments it appears that a class of animals or a system of feeding which may be profitable at one time may be relatively unprofitable at another when prices change.

In the illustration that has been chosen, it is impossible to put C at the head of the list only because she happens to have made exactly the same amount of butter as A, but with the consumption of more feed. If she had made even a few pounds more butter or consumed slightly less feed, it would be only a question of prices when she would outrank A.

Guernsey Jottings

Advance of the Guernsey in Wisconsin

ANOTHER County in the greatest dairy state in the Union has been added to the list of those doing Advanced Register work. This is Brown County, which now makes a total of 15 Counties in Wisconsin where Guernseys are being run for the Advanced Register. The test work in Brown County was started January 4, 1914, as a result of the purchase of Leon J. Delahaut, of Green Bay, Wis., of seven head of Guernseys—six cows and one bull. Mr. Delahaut obtained these cattle from the large herd belonging to J. L. Hope of Madison, N. J., and personally selected and accompanied them from Madison, N. J., to Green Bay, Wis., by way of the Pierre Marquette line, crossing Lake Michigan from Ludington to Manitowoc and arriving at home after a seven days' trip on December 27 at midnight.

He was fortunate in securing from Mr. Hope four cows under test, and one, a daughter of Pride of the Friquet, with an Advanced Register record of 436 lbs. of fat already completed. She will be retested as soon as she freshens and can make, without a doubt, a much larger record. Those on test will continue their work under the supervision of the Wisconsin Experiment Station, and up to the time of shipment were doing very well for Mr. Hope. One, a daughter of Fanny's Sequel, entered as a two-year-old, made 296.31 lbs. of fat in 235 days. Another two-year-old, by Clara's Sequel, made in 97 days, 141.76 lbs. of fat. Another, by Sequel's Monogram II made in 70 days, 93.85 lbs. of fat. The other one under test is a daughter of King Bell and made 147.15 lbs. of fat in 101 days. These records are up to Sept. 30, 1913, and the heifers have all more than qualified for the Advanced Register by the present time. One which he purchased is a daughter of Gay Boy, he being by Masher's Sequel and out of La Fleur du Jardin X. She herself, is out of the fine cow, Hayes Weenie, owned by Mr. Hambroof England, and will be tested after calving.

The bull, which will be a year old the 15th of January, is sired by Pride's Pretor, a very high class individual, he being by Pretor with seven Advanced Register daughters, and out of Pride of Home with 534 lbs. of fat, the Grand Champion Cow at St. Louis in 1904 and dam of four Advanced Register daughters. The dam of the bull is Chronicle, tracing back to May Rose on the sire's side. Her record as a two-year-old is 444 lbs. of fat, and under test has made in 286 days 521 lbs. of butter fat. She is the dam of Chronicle II, who made as a two-year-old 472 lbs. of fat.

Mr. Delahaut started breeding Guernseys about four years ago, his first purchase being made from the herd of Mr. F. G. Benham, Canandaigua, N. Y At that time he secured four females and one bull, one of the females being a daughter of Invader, another a daughter of Renown of the Gacheiries, another a daughter of His Majesty of Ida's Cottage, be being by Governor of the Chene. Since purchased she has dropped a fine heifer, now in milk, by Imp. Holden IV, sire of Miranda of Edgewater, with 730 lbs. of fat as a two-year-old, and sold at the Benham sale for $2,500. The bull is now being used as a herd bull and is out of Maid of the Vrangue, one of Mr. Benham's finest cows.

Mr. Dalahaut expects, not only to finish testing the heifers of his recent purchase, but now that he has started, he will run all of his cows in milk for the Advanced Register as fast as they freshen.—H.

In the Green Mountain State.

Vermont dairymen support a live organization. There are many larger states, but very few that bring out a better attendance of wide awake, thinking men. The state authorities recognize the value of such an organization and assist in a material manner. Vermont has always stood well up in front in regard to cow testing associations.

The annual meetings for some years have been held in Burlington, as other cities lacked the hotel accommodations and halls adapted to caring for the Convention; moreover, Burlington is a R. R. center easily reached, though well up state. The south part of the state very much desired to have the meeting this year, claiming that the new Shriners' Hall just completed the past year at Rutland would give an abundance of room.

These state conventions have grown within the last few years to need not only a hall for meetings, but another, even larger, for the display of agricultural machinery. Manufacturers and dealers in dairy supplies of all kinds, down to the latest in milking stools, have found these conventions to be an admirable place to display their goods, and meet old and new customers. The feed men are also here to explain the superiority of their special mixtures. The man who will go to some expense to attend these meetings is one who realizes the wisdom of having the best appliances for his work.

The annual banquet is always attended by the members and their wives and state officials lay aside the pressing duties of their offices to be present. The Governor and Lieutenant Governor were present and Congressman Green came on from Washington to preside as Toastmaster. It was an evening of entertainment long to be remembered.

The transparencies, showing pictures of prominent Guernseys, were exhibited and attracted much attention. Many people were led to inquire about the merits of the Guernseys and the Club's representative is sure that the cause has been strengthened and that new breeders will join the ranks. Similar work was done at Syracuse, N. Y., in December, and will be continued at York, Pa., and Hartford, Conn., the third week in January.

This campaign of education cannot fail to bring satisfactory results. The increasing number of registrations and transfers, especially of bulls, is evidence of a strong movement all along the line.—B.

Guernsey Interest in Algona, Iowa.

Judge Quarton, who, together with Messrs. Julian, Adams, Keen, Hofius, and several others, has been largely responsible for dairy progress in Algona, has interesting ideas. He is a breeder of pure-bred Guernseys, and has no sympathy with the dual purpose idea. This is the age of specialization and high prices, and on the farm, as everywhere else, we must conduct everything at its highest efficiency. A trip to Wisconsin a number of years ago convinced him of the fallacy of the dual purpose idea. He was driving through western Wisconsin, and stopped at the dairy farms. He found that the cows were dual purpose, and giving about 150 pounds of butter-fat, which at that time was selling for 25 cents a pound. These dual purpose men thought that an income of $37.50 to the cow, and a steer calf, was pretty good. The judge drove on further until he came to a community of Swiss farmers, who confined themselves strictly to dairying. These cows he found were giving an average of about 300 pounds of butter-fat per year, with a total income of about $75. The judge decided then and there that $37.50 was too much to pay for a calf.

The judge has kept some cows of which he has been very proud. One, for instance, he bought a number of years ago as a calf, for $140. He kept her for five years, and during that time she produced two heifer calves and a bull calf which sold for a total of $500. The butter-fat she produced during the period brought $365. At the finish he sold the cow herself for $700.

I tried to point out to the judge that perhaps he was making money in the dairy business because of good prices secured for his pure-bred young stuff. Then he pointed out to me that his average cow last year produced something like 280 pounds of butter-fat, which was worth about $90. Besides this, there was skim-milk in value amounting to about $15, and a calf worth perhaps $40, making a total estimated income from the average cow of about $145. Then, together, we figured up the expenses. The judge thought $50 was enough for feed, although I feared that this would be at least $5 or $10 low for a 280-pound cow. I wanted to allow $20 for labor. The judge said that he considered the labor and the manure to balance each other, so we did not put this down. Since he valued the cow at $125, the yearly depreciation on her with interest on the investment, would be about $20. Then there would be perhaps $2 more for bull service and $5 to cover such miscellaneous items as shelter, taxes, veterinary expenses, etc. And so we had a profit of $27 and the calf. There must be some weakness in these figures, but I confess that I can not find out what it is. It seems incredible if they are so, that there is not more demand among creamery patrons of northern Iowa for well-bred dairy sires.

Perhaps the most effective rebuttal to the judge's special purpose argument is his own dual purpose life. By profession he is a lawyer, but his interests are largely centered in dairying. He successfully engages in both lines of business. It broadens his outlook to be a dual purpose type of man. The judge has had opportunity to go to large cities as a high salaried lawyer, but he has preferred to remain close to the soil. In principle, we do not see that the judge is a great deal different than some of his dual purpose neighbors with whom he does not have a great deal of sympathy.—Wallace Farmer.

The Hired Man's Interest in the Cow.

A dairy cow arouses in any man who cares for her a sense of pride and a feeling of personal interest that is not possible with other farm work. On farms where the milk from each cow is weighed and tested, and its value computed, any hired man will take a very keen interest in having his favorites make a creditable showing. (One successful dairy man relates a story, of how one time after the noonday meal a discussion was started as to the probability of a Guernsey heifer in the herd making a record equal to another that was getting a great deal of publicity in regard to her production. Quietly he said the hired man left the room. When the owner went to the barn at the time to start the afternoon's work the hired man was found currying the favorite. Could that hired man be trusted to milk that cow? Could be he depended on to look after her needs carefully? Every reader will answer in the affirmative. Let us look to the reasons for it. The cow was worthy of respect, attention and appreciation. The hired man had been allowed, if not actually induced to take personal interest and pride in the yield of that cow. He was equally appreciative as the owner in her records).

One of America's greatest economic students recently said, "The labor problem in America must be solved by some sort of profit sharing whereby the laborer will obtain a portion of the proceeds according to his ability to produce." Is not that true of the dairy? Is it not a fact that the matter of feeling a pride and a personal interest in the dairy is a great and important factor? Every man whether farm owner or hired man feels proud of any work well done.—Exchange.

Manitowoc County Guernsey Breeders' Association.

The Manitowoc County Guernsey Breeders' Association held its second annual meeting in the Assembly Room of the Court House at Manitowoc, Dec. 16, 1913, commencing at ten o'clock, a. m.

The principal feature of the meeting was an illustrated lecture on Guernsey Island by Chas. L. Hill, President of the American Guernsey Cattle Club, that was greatly appreciated by an enthusiastic audience composed largely of Guernsey breeders and students from the County Training School for teachers, who, with their principal, attended in a body.

At the afternoon session, Mr. Hill discussed some of the details of the breeding and care of Guernseys. The factors he considered of greatest importance in the breeding of Guernseys was for the production of a large quantity of milk, rich in butter fat, good flavor and with a rich yellow color; these factors being of far more importance to the breeder than the color markings and other fancy points that are often times the principle ideals of the beginner.

After Mr. Hill's talk, Mr. Geo. W. Kiel, President of the Manitowoc Association, gave a short talk, discussing the work of the Association during the past year and plans for the coming year.

All of the old officers were elected. They are: Geo. W. Kiel, Whitelaw, Pres.; O. M. Samz, Mishicot, Vice-Pres.; Ed. A. Knutson, Manitowoc, Secretary; Otis A. Marken, Valders, Treas., Christ Muth, Manitowoc, and Fred Jacobi, Jr., Cleveland, who, with the President, Secretary and Treasurer, constitute the board of directors.

The Association has enjoyed a rapid growth, having been organized a year ago with twenty-four charter members who reported the ownership of ninety-seven pure breds and two hundred and fifteen grades. At the second annual meeting, we had forty-four members reporting the ownership of a total of one hundred and fifty-three pure breds and four hundred and nineteen grades. There are still a number of Guernsey breeders in the county who have not yet joined the Association, so that the total number of Guernseys in the county will exceed this number considerably.

ED. A. KNUTSON, Secretary.

There was recently shipped to Prof. Harry Hayward, Director of the Delaware Exp. Station, from Linda Vista Farm, Holliston, Mass., the young bull calf, Anton's May King.

This calf's sire is the Experiment Station's Guernsey herd bull, Beda's May King 11893, A. R., the dam being Anton's May Rose 27293, A. R. 1926, a member of the Linda Vista herd.

Anton's May King is, therefore, an inbred "May Rose," being a double grandson of Imp. May Rose King 8336, A. R. 41, and carries 31.25% of the blood of old May Rose II.

Prof. Hayward is very much pleased with Anton's May King and is looking forward to the results accruing from the use of this bull on the Delaware Station herd.

Beaver Ridge Farm reports a sale to Guernseydale Farm, West Salem, Wis., of the cow Little Nell II of the Quatre Vents, dam of Rex of Beaver Ridge Farm, who is sire of Princess of Beaver Ridge; also a daughter of Billy's France's Honeymoon of Lewison. We understand that Guernseydale Farm took west a carload, making other purchases from the Annandale Farm and that of Robert Brewster, both of Mt. Kisco, and at Mr. Macy's Farms, of Ossining, N. Y.

Keeping Records.

There is no branch of animal husbandry in which so much has been learned in the last ten or fifteen years as in the case of dairy cows. We did not begin, even, to obtain an insight into profitable dairying and the peculiarities of dairy cows of various types, weights, etc., until the Babcock test was available. "It is really wonderful," writes John Y. Beaty of California, "what we are learning since dairymen are keeping accurate records of their cows. One of the facts which may surprise many, has been disclosed by a comparison of records made by several dozen breeders of the three important dairy breeds—Jersey, Guernsey, and Holstein. This fact is that the heaviest cows, as a rule, produce the most butter fat and produce it most economically. That is, the largest cows—other things being equal—are the most profitable. Now don't jump at conclusions and decide that the way to select a profitable dairy cow is to buy the biggest one you can find, but size is a consideration and in a herd of good cows it is usually found that the largest cows produce the most milk, eat the most feed and yet make the most profit. This is true regardless of the breed." The above statement of Mr. Beaty is based on the records he has complied on 398 cows. Thirty (30) cows, average live weight 1,210 pounds, average butter fat 674 pounds, cost of feeding $102.71 per cow, and average net returns $114.55; 120 cows, average live weight 1,118 pounds, average butter fat 503 pounds, average cost of feed $83.39, average net returns $78.36; 150 cows, average live weight 1,050, pounds, average butter fat 428 pounds, average cost of feed $78.77, and average net returns $61.10; 98 cows average live weight 929 pounds, produced an average of 322.3 pounds butter fat, average cost of feed, $58.36, with average net returns of $41.53.—Exchange.

Another Guernsey Admirer.

Guernsey Breeders' Journal:—

We are living, thinking, feeding —Guernsey cattle every day and like it so well that we are anxious for more. We now have fifty-seven head, all Guernseys, not many of them registered, however. We just arrived home from Wisconsin with two cars—a car of cows for our dairy and a car of first-calf heifers for a neighbor. We are both in possession of pure bred bulls and we are having inquiries every week for cattle. Somebody all the time wanting to buy our Guernsey cows—but when we make a Guernsey cow produce us $300 annually we can't let our good ones go.

We want to breed some good ones, and a little later will want a car of pure breds, (good ones) for ourselves and neighbors. I am the cause of one young man investing in a car of heifers and a pure bred bull. Won't you be kind enough to send sample copies of the Breeders' Journal to the parties whose names I will send, accompanying each with a letter from your office. It will do them good, for they do not know of it. It is the best book I know of. W.

Guernseys Best by Test

Mr. G. S. Smith, of Monmouth, Maine, reports the following awards and scores won by him at the Maine State Dairy Conference, held at Lewiston, Maine.

Butter—In Dairy Prints—Score 97½%.

Market Milk and Cream, 94½%.

Market Cream 91¾%.

The De Laval Separator Company's special to the exhibitor of the highest scoring sample of Dairy Butter—One De Laval Separator, Value $75. Score, 97½%.

Worcester Salt Company's Gold Watch.

J. B. Ford Comapny's Carving Set.

Stick to the Tried Dairy Sire.

"One of the greatest mistakes I ever made was when I sold the Guernsey bull I had, for beef, after using him only two years. Every one of his daughters, whether pure-bred or grade, have made promising cows. Yes, I sold him for $40 when he was worth $400. Had I kept him and bred back some of his daughters to him I would have the best herd of dairy cattle in this end of the state. I've learned my lesson; get the best bull you can afford, and keep him. Do not be changing sires all the time." These were the words spoken by one of the best dairy farmers in the neighborhood, recently, as we were discussing the great demand for dairy cattle of the four leading breeds.

In the business of breeding live stock the closer one can keep to one line of breeding the better. You cannot get heredity, propotency and transmitting power if you are continually changing sires and bringing fresh blood into the herd. One cannot prevent a continual reverting back unless there is one superior force exerting its influence in intensifying and holding together the good qualities and family characteristics. —Exchange.

Ohio State Dairymen Meet on February 5-6.

The Woman's Building at the Ohio State Fair Grounds has been secured for the event. The exhibit floor of this building will be filled with exhibits of dairy machinery, including milking machines, stanchions, cream separators, etc., dairy supplies of all kinds and dairy products. Do not forget that you can help make this a great show by sending exhibits of milk, cream and butter.

The meetings will be held in the auditorium of the same building. Among the speakers are B. H. Rawl, Chief of the Dairy Division, Washington, D. C.; R. A. Pearson, President Iowa State College, formerly Dairy Commissioner of New York state; A. J. Glover, of Hoard's Dairyman, Ft. Atkinson, Wis.; W. W. Marple, Chicago, G. A. Dimoc and G. W. Rising, Ohio Holstein breeders; Mr. Flanders, Chief Legal Dairy Adviser of New York State; E. A. Bishop, American Guernsey Cattle Club. O Erf, Sec'y-Treas.

University Buys Guernseys.

A deal has been closed by which the University of California comes into possession of Guernsey cattle known as the Fern Ridge Farm herd located near Yuba City. It has been known for some time that this herd was for sale and as the University was in the market for a string of Guernseys, California is fortunate in having this fine collection stay in the state. They will become a part of the dairy herd at the University Farm at Davis.

The deal involves between twenty and thirty head and were the property of J. H. Mackenzie, the well known Nevada mine operator. When the herd was first started itwas located in Santa Cruz county, but was moved to Mr. Mackenzie's Farm near Yuba City two years ago. The herd is rich in the most popular blood lines, especially in King of the May, Dolly Bloom and other families.—Pacific Dairy Review.

Mr. A. C. Loring, proprietor of Woodend Farm, Lake Minnetonka, Minnesota, already is the proud possessor of one of the finest Guernsey herds in the West, and he has recently sent an expert, Dr. M. B. Wood, to England with instructions to purchase 15 or 20 more head of the best Guernseys that money can buy. Mr. Loring is a man of ample means and is interested in the development of Minnesota Dairy quality aside from the direct profit from his own breeding. He has already sold Minnesota farmers some of the best Guernseys ever brought into the state.—Exchange.

Another California Guernsey Herd.

Joseph L. Hope, Florham Farms, Madison, N. J., shipped, on December 11, a car-load of seventeen Guernsey heifers and a carload of Guernsey grades to George W. Wilder, Redlands, California. The grades were all of Mr. Hope's breeding from heavy milking cows bred to registered bulls. The pure-breds were, with two exceptions, from a recent importation. Some were of the Brittelware strain, daughters of Admiral of the Briquet 2959 P. S., a bull strong in the Masher blood, and three were sired by Clara's Sequel 2207 P. S. Eight of these heifers have been bred to Imp. Itchen Red Raider, the great May Rose bull recently imported by Mr. Smith of Holliston, Mass.

The entire lot was carefully selected and every individual is a choice one. It is a splendid addition to Mr. Wilder's herd which was started a year ago with a few animals from Chilmark farm. Mr. Wilder proposes to begin Advanced Register work when these heifers freshen, We shall then see what Southern California can do with Guernseys.

The shipment was made via New Orleans and the Southern Pacific Railway, and in thirteen days every animal was landed in Relands in perfect condition.

An Ode to the Guernsey.

Long years ago these famed cattle of style
Were raised alone on the Guernsey Isle;
But men there were, then, who had a foresight
That these cattle were destined to be just about right.
They imported a few and O! how they worked—
Their tasks ne'er omitted, their duties ne'er shirked—
Until now the sun shines on no cattle so fair
As the Guernsey cow with the yellow and white hair.

In the breeding of these Guernseys so fine—
Waukesha County leads the whole line.
Buyers come here from the West and the East
To purchase this docile and highly-bred beast.
They care not for measure, but look at the test—
For on this vital point she excels all the rest.
They know she means money made honest and right,
So they hand out the dollars so shining and bright.

Her beauty surpasses all cows 'neath the sun,
Her cream is the richest, exceeded by none.
She moves through the pasture with maidenly grace,
With dignity plain in her mild, gentle face.
We cannot but lavish upon her our love,
For she is as kind as a beautiful dove.
She cares for her calf with the pride of a mother,
Just leave him to her and he'll cause you no bother.

Waukesha County with its pastures so green
Can care for the Guernsey just like any queen.
With a silo to help when scarce is the feed,
She'll capture all the state fair prizes—indeed.
There are, of course, Holsteins and Durhams and Swiss,
Each have their good points—but listen to this:
The colors may range from sober to bright
But there's none you can bank on save the yellow and white.

MRS. T. H. E., Wales, Wis.

ADVANCED REGISTER RECORDS COMPLETED AND APPROVED TO JANUARY 15, 1914.

Maude Estella 20390, A. R. 2451, owned by J. Gilbert Hickcox, Whitefish Bay, Wis. Record:—9119.80 lbs. milk; 373.07 lbs. b. f. 8 yrs. 1 mo. old.

Sula of Willowdale 26523, A. R. 2452, owned by J. Gilbert Hickcox, Whitefish Bay, Wis. Record:—8311.00 milk; 413.00 lbs. b. f. 3 yrs. 2 mos. old.

Celosia Fern 31835, A. R. 2453, owned by Herbert T. Borden, Mickleton, N. J. Record:—6868.60 lbs. milk; 321.52 lbs. b. f. 2 yrs. 3 mos. old.

Golden May Queen of Pencoyd 24174, A. R. 2454, owned by T. W. & I. W. Roberts, Bala, Pa. Record:—10053.60 lbs. milk; 483.22 lbs. b. f. 4 yrs. 6 mos. old.

Where to Sell Guernseys.

(Continued from Page 20.)

interest in Guernseys and so, of course, your ad is not read by men that are really prospective customers.

Before you spend your money, study the situation thoroughly and determine as accurately as you can that territory in which you can probably get the best results and then determine those papers which will probably cover that territory the best.

The accompanying table shows the number of Guernsey breeders in the different states of the union. This will be interesting and valuable in many ways to those who have surplus Guernsey stock to sell.

Alabama, 1; California, 16; Colorado, 5; Connecticut, 59; Delaware, 12; Georgia, 3; Idaho, 1; Illinois, 24; Indiana, 15; Iowa, 16; Kansas, 6; Kentucky, 1; Maine, 32; Maryland, 29; Massachusetts, 91; Michigan, 51; Minnesota, 48; Missouri, 13; Nebraska, 4; New Hampshire, 26; New Jersey, 39; New York, 214; North Carolina, 2; Ohio, 71; Oregon, 5; Pennsylvania, 211; Rhode Island, 8; SouthCarolina, 7; South Dakota, 1; Tennessee, 1; Texas, 1; Utah, r4; Vermont, 19; Virginia, 13; Washington, 6; West Virginia, 4; Wisconsin, 231.

What is Your Average.

With the growth of A. R. work, Guernsey breeders are becoming better acquainted with the individual cows in their herd. Instead of considering the herd as a whole, the units that compose and affect its standing as an income producer are being examined. The old rule and advice of boyhood days, "look out for the cents and the dollars will care for themselves," is doubly applicable in the dairy barn. Intelligent feeding on one hand and production on the other are the cents (sense) that must go hand in hand to produce the income of dollars that is satisfactory.

What is Molly's average yield for the month and year? Is she raising or lowering the average for your herd? Does she eat more or less than Polly, who stands beside her? Have you a standard in milk or butter-fat yield to which each cow must attain if she stays in your herd? What is the standard or the margin of profit that satisfies you? Is it three, four, or five hundred lbs. of butter-fat?

It is interesting to note that the breeder who puts down no stake seldom moves, while the man who sets his on the three hundred lb. mark is soon dissatisfied and determined to move it to three hundred twenty-five or fifty, and on to four hundred or more. Like acquiring wealth, the more he gets, the more he wants and believes is within his reach. Some of our breeders have said that nothing less than five hundred lbs. will satisfy them, and they have gone over it.

January is a natural time of the year to look back over the work of the herd and farm. Several such statements have come to our desk the past week which we would like to give in full, if space permitted. In one herd of nine cows of various ages and stages of lactation from second to the twelfth month, the average yield for December has been 54.54 lbs. B. F., four of the number being heifers with first calf. Five gave between 51 and 85.18 lbs. B. F.

Another herd with eighteen A. R. records shows an average of 10,572.20 lbs. mifk and 524 lbs. B. F. Where have you set your stake, and what is your herd average?

The Advanced Register of Guernsey Cattle

SPECIAL NOTE This list contains the latest credits and totals for the several cows entered in The Advanced Registry work so far as same has been checked up and verified at the time the list is put to press.
Any omissions or back credits given signify that either data has not been received in time, or was held up pending verification. In such instances they will appear in next list published.

DE LAVAL

Butter Triumphs as Usual At National Dairy Show

BUTTER made from cream separated by De Laval Separators made the usual clean sweep of all highest awards at the great 1913 Chicago National Dairy Show and Annual Convention of the National Butter-makers' Association, just as it has always done every year since the organizalion of the National Association in 1892.

Whole Milk Creamery Butter The highest score in this class was awarded to O. N. Peterson, of Rapidan, Minn., a De Laval user, as were 187 out of the 200 whole milk creamery entries.

Gathered Cream Creamery Butter The highest score in the gathered cream factory-made butter class was given R. O. Brye, of the Readstown Creamery Co., Readstown, Wis., this prize winning butter being made from the cream of farm patrons all using De Laval Separators.

Farm Dairy Butter The highest score in this class was awarded to Mrs. D. H. Turnbull, of Monmouth, Ill., whose family has been using De Laval Cream Separators for over twenty years.

De Laval Superiority Indisputable The evidence of the superiority of De Laval cream and butter as demonstrated by the winning of all highest awards the world over for thirty years, is so overwhelming as to be indisputable and unanswerable. A De Laval catalogue, to be had for the asking, will make plain the reason for it.

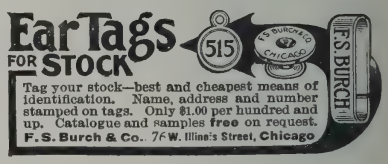
UNITED STATE DEPARTMENT OF AGRICULTURE
Bureau of Animal Industry
Washington, D. C.

December 20, 1913.

Mr. Thomas F. Ryan,
Oak Ridge, Va.

Sir:—In accordance with your signed agreement with this Bureau, the regular annual retest with tuberculin was applied to your herd of cattle by Dr. C. E. Lindburg of this office upon Dec. 12 and 13. As a result of this retest your entire herd of 65 cattle was regarded as free from tuberculosis.



Very respectfully,
R. W. HICKMAN,
Chief Quarantine Division.

If You Want Guernseys

Pure breds or grades from the best herds in the state of New York, send for the official Sales List of the

DEWEY'S

Ready Ration

Guaranteed Analysis:

25 per cent. Protein
7 " " Fat
9 " " Fibre
50 " " Carbohydrates

Composition:

Eagle Distillers Dried Grains, Choice Cotton-Seed Meal, Old Process Linseed Oil Meal, Winter Wheat Bran and Middlings, Pure Hominy Feed, Malt Sprouts, ½ per cent. Salt.

Dewey's Ready Ration, when fed in connection with the home grown hay, straw, fodder, ensilage and roots, forms a perfectly balanced ration. It is a complete grain ration for dairy cows. No other feed or grain need be fed with it.

The Feed Question

The feed question is not or should not be one of price per ton, but of "how much milk will each dollars worth of feed produce." Dewey's Ready Ration is worth all it costs because it is scientifically blended from the highest grade feeds to produce for you all the milk possible for each dollar that you pay. "The proof of the pudding is in the eating." Try Dewey's Ready Ration. Give it a chance to convince you.

THE 1914 MODEL

UNITED STATES

Cream Separators

If in the U. S. its good
If good its in the U. S.

The 1914 Model
is the Separator Extraordinary

The Sanitary Liner

The 1914 model has a **Sanitary Liner** for bowl chamber, it is removable non-rusting and easy to wash. Milk, even in the smallest quantity, coming in contact with iron renders all other separators insanitary. The **liner**, exclusively a U. S. feature, prevents milk contact absolutely.

This **liner** fits into the bowl chamber herein shown; and in which the bowl sets. With this **liner** milk never touches the iron bowl chamber.

A Great Sanitary Feature

Every Guernsey Breeder

SHOULD HAVE

Hoard's Dairyman.

No other publication in the world has **labored as ably or zealously for the advancement of dairying.** It is a mighty power in the dairy world for the dissemination of sound dairy practice.

No publication we could name would make a more complete or better combination with the Guernsey Monthly. **Both journals** belong on the reading table of **every man interested** in Guernseys.

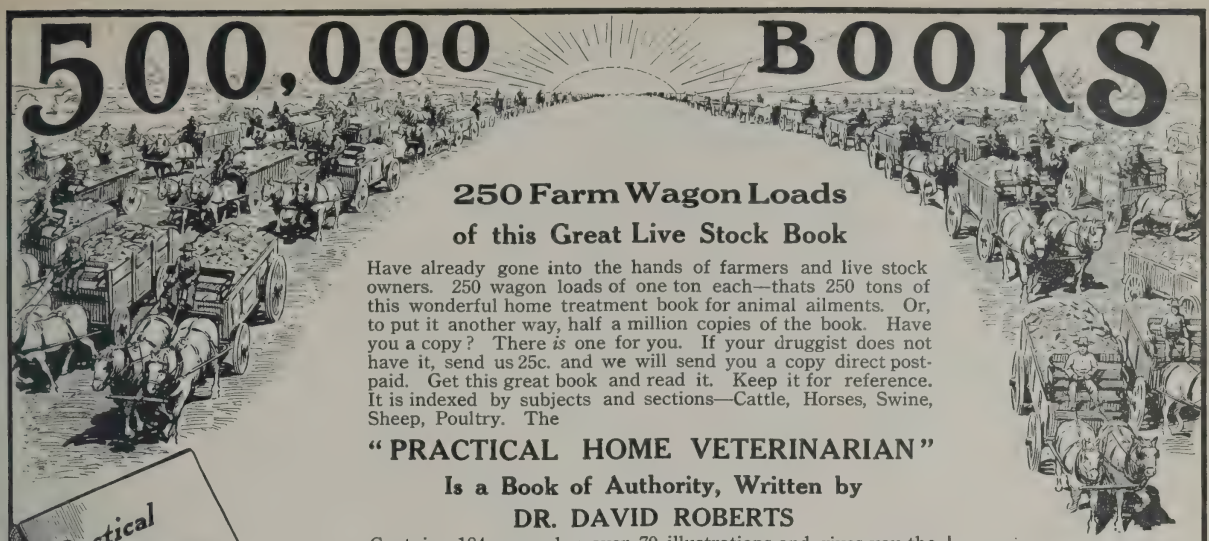
By special arrangements with the publishers, we are able to offer

GUERNSEY BREEDERS' JOURNAL

AND

HOARD'S DAIRYMAN

Both One Year for $2.65



Dont fail to take advantage of the combination. When you renew for the Guernsey Breeder's Journal do not forget to include HOARD'S DAIRYMAN.

Bethany, W. Va.

The Agricultural Guild

Offers for sale **at moderate prices** a few bull calves **good enough to head choice herds,** and at low prices. Bulls that will improve most herds. In herds belonging to the members of the Guild are found the following bulls :

Imported Border Raider

He is a show bull of very high quality, which he impresses on his calves. He carries 27 1-2 per cent. of the blood of May Rose II.

Dairymaid's Glenwood of Pinehurst 10548

His full sister is the second highest producing cow of the breed. His three tested daughters averaged 467 pounds of fat as two-year-olds.

Imp. Pride of Day 1849 P. S.

He was a King's Cup winner on the Island. His full sister produced 583 pounds of fat as a two-year-old. His calves are uniformly good.

Stranford's Glenwood of Pinehurst VII. 17392

This bull furnishes the best combination of the Selma, Dairymaid, Stranford Princess and Glenwood blood to be found. His calves are very choice.

Besides these great bulls, our herds contain sons or grandsons of Governor of the Chene, Masher's Sequel, Galaxy's Sequel and King of the May.

With the best of bulls, and over one hundred offlcially tested cows, we are in a position to breed Guernseys intelligently.

We are Breeders, not Dealers

We offer for your selection choice young bulls backed by good records. We price them worth the money.

We veal all bull calves that are not reasonably sure to improve the dairy stock of the country. We guarantee satisfaction.

All our Herds are Tuberculin Tested

Ledyard Bay Guernseys

Young Bulls and Bull Calves for sale from cows with big records and sired by Old Faithful 14947 and Ledyard Bay 2d 19299.

Old Faithful is a large bull with good back and well sprung ribs, giving him great feeding and dairy capacity. In breeding he is backed by the cream of the Helendale Herd.

Ledyard is full brother to Azucena's Pride 2d, holder of the following records:

12633.30 lbs. milk; 706.46 lbs. fat as a 2½ year old.
16203.90 lbs. milk; 855.70 lbs. fat as a 4 year old.
Champion Record for the class.

It is a notable fact that the sire and dam of Ledyard Bay 2d are direct descendants from such noted animals as Lord Stranford, Sheet Anchor, Rutila's Daughter, Lucretia, &c.

Ledyard Bay 11074, the sire of Ledyard Bay 2d, has now eight daughters in the Advanced Register that average 520 lbs. fat, all but two with first calf. I have ten more. We wonder what they will do when tested.

Write for my Sales List and Folder.

What Wm. Galloway Thinks of

CORK BRICK

Mr. Wm. Galloway's Barn, Waterloo, Iowa.

Stalls paved with 7500 Cork Brick.

Every stock owner should write for our 32-page illustrated book describing Cork Brick. It's free. Sample too, if you want it.

"One of the finest dairy barns in the country is that of Mr. Wm. Galloway, the well-known manufacturer, of Waterloo, Iowa. Almost two years ago, he had all his stalls paved with Cork Brick. The following letter shows how well satisfied he is with the results:

"I am glad to report that I am having very fine success with the Cork Brick. They make a very warm floor for the cattle to stand on. They are resilient, sanitary, and durable, and best of all, the cattle do not slip around on the floor the way they would on cement and other floors.

"In fact, I think the Cork Brick are just the ideal thing for a floor in a stable or barn of any kind in which you put either cattle, horses or any other live stock that have to stand in the same place. I would not think of building a barn without using Cork Brick, and can cheerfully recommend it to anyone wishing to have ideal flooring for a barn of any kind."

May we send you further information?

ARMSTRONG CORK & INSULATION COMPANY, 119 24th Street, Pittsburgh, Pa

Guernseys Deserve Good Ensilage

To keep ensilage fresh, sweet and succulent from the time the silo is filled until the last forkful is fed, you need to protect it from heat, cold and moisture. The

NATCO IMPERISHABLE SILO

is built of vitrified clay hollow blocks which contain two dead air spaces. The non-porous quality of these blocks and their glazed sides exclude all air and moisture. They make a silo wall that is

Weatherproof, Decayproof, Fireproof, Verminproof

The "Natco never needs painting—no hoops to tighten—no continual repair bills. It lasts for generations and keeps ensilage in perfect condition *always*. Attractive in appearance—an asset to your permanent farm buildings. *Any mason can erect it.*

Write today for illustrated book No. V. describing the construction of this better silo—mailed free.

National Fire Proofing Company

Donald of Ellenwood 16329

One of our herd bulls, is certainly a splendid individual. His pedigree shows such individuals as Glenwood's Main Stay 6067, Mainstay 3789, Glenwood Girl 6th 9113, Sheet Anchor 2934, Manager 3393, and other famous A. R. blood. He resembles very much Old Sheet Anchor. Our other herd bull, Glenwood's Main Stay 24th 12664, who is sire to Donald, has proven himself a worthy sire.

About half of our cows have been admitted to the Advanced Registry with creditable records. Their blood traces back to such ancestors as Divan 5846, Pat of Haddon 3919, Sheet Anchor's Rutila 9170, Glenwood Boy of Haddon 4605, Glenwood's Champion 15639.

Write for price list and descriptive breeding of young bulls from A. R. cows. We are also breeders of select Berkshires. Visitors are welcome.

Fills Your Silo Quickly

With Less Power and Labor

You can operate this machine with a 4 h. p. gasoline engine. It's the lightest running blower type of ensilage cutter made—The *throwing, blowing, lifting force* carries the ensilage in a steady full stream rapidly up into the highest silo without waste of power. The ensilage packs perfectly and keeps sweet and succulent. The

Papec Ensilage Cutter

is easy to set up and take down. Simple in construction, not easy to get out of order. The entire frame is one solid piece of semi-steel. The bearings are always in line, run smoothly and will not heat. The feeding mechanism is geared to the main shaft—always gives you the desired length of cut. THE PAPEC ENSILAGE CUTTER is not chain driven but has heavy gears which transmit all the power. It cuts ensilage perfectly and swiftly—as fast as you can bring the corn to the machine.

Write for Illustrated Catalog. Send today for this book. It shows how The "Wonderful Papec" cuts ensilage with less power, time and labor.

Molassine Meal

MADE IN ENGLAND

Guernsey Testimony Like This Counts

Why

You can get better results from your regular high protein ration by using

Molassine Meal
MADE IN ENGLAND

Because no other feed in the world possesses these peculiar antiseptic and digestive properties. It is absolutely different from any other feed.

3 lbs. of Molassine Meal with 9 lbs. of Protein Ration will produce more than 12 lbs. of Protein Ration.

A healthy stomach means increased digestive and assimilative powers

Molassine Meal is Unique -- Distinctive--Superior

FERNDALE FARM

MILK AND CREAM

Breeders of Guernsey and The Improved Ayrshire Cattle.

Choice family Cows for Sale at All Times.

All Stock Tuberculin Tested.

Auburndale, Mass.

Gentlemen:

I want to tell you that the **Molassine Meal** that I bought through the J. Cushing Co. of Weston, and commenced to feed some two months ago **has proved to be the best feed I have ever used. It certainly has produced wonderful results to everything I have fed it to,** which includes our cows, calves, and horses. **Each one of our horses has gained more than fifty pounds,** and it has given them the slickest coat they have ever worn. It certainly has put the bloom on to the cows and calves, and **our cows never kept up so well in their milk supply as they have this spring, but I can see why,– for it keeps their system in the pink of condition.**

Yours very truly,
(Signed) FRANK H. POPE,
Manager.

Its antiseptic properties free the stomach and intestines from worms or bacteria, thus **enabling your animals to get full value from their food**

FOR ALL FARM STOCK

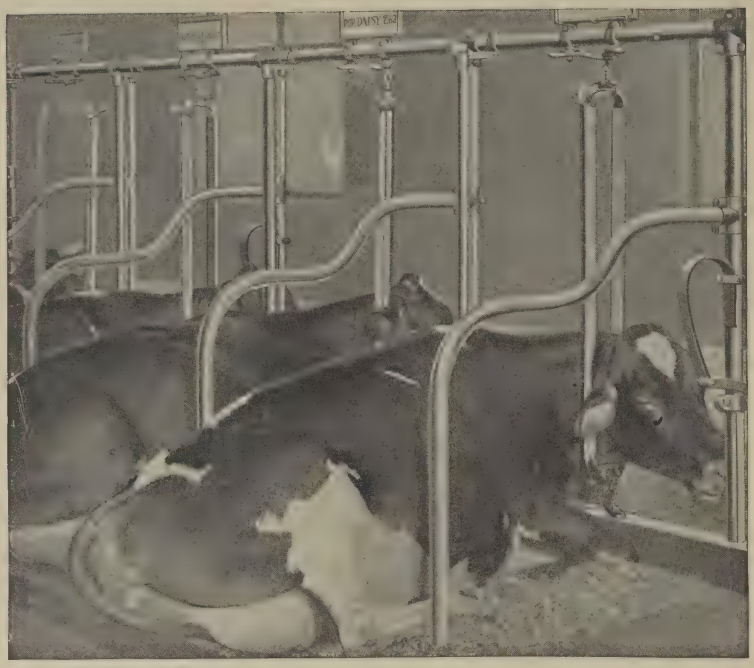
GUERNSEY BREEDERS' JOURNAL



MARCH 1914

THE TRACTABILITY OF THE GUERNSEY

HERD REGISTER: Bulls Nos. 26881 to 27000; Cows Nos. 46761 to 48000; A. R. Nos. 2436 to 2500
Re-Entries; 600, 856, 973, 1134, 1230, 1295, 1377, 1404, 1417, 1421, 1542, 1544, 1575, 1579, 1583, 1720

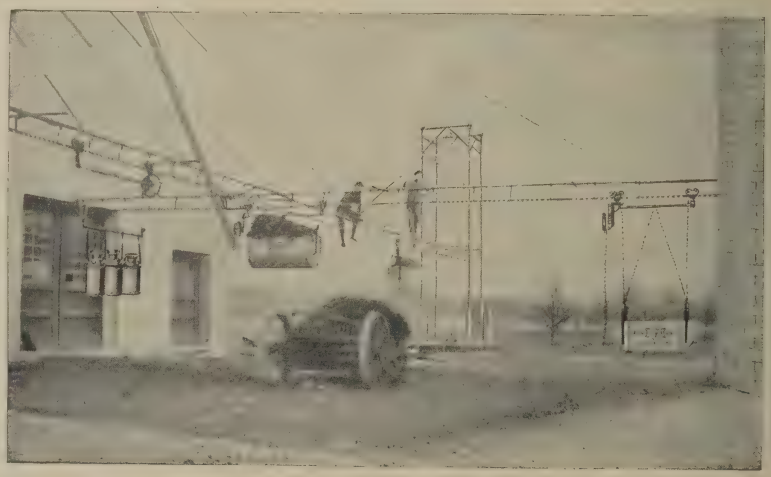
Cow Comfort Means Cow Efficiency

The quantity and quality of your milk supply—therefore your *profits*—depend upon the conditions under which your dairy herd lives. Cows give *more* and *better* milk when they are comfortable. The barn should be sanitary—the cows protected from chance of injury—with abundant light, ventilation, etc.

James Sanitary Barn Equipment

Is designed primarily to keep cows *clean, comfortable* and *safe.* It is a big *profit-producer.* It is *humane.* It creates barn conditions that will uphold the pride of every progressive dairyman. It is *economical.* Its patented features reduce barn expenses—only half the work being required in cleaning stalls and caring for the cows. The JAMES is the Barn Equipment for *business-like* dairymen.

Free Barn Plan Service.



W. D. James, of this company, is considered the foremost authority on sanitary barn construction. The expert knowledge and experience of Mr. James and his associates are at *your* command if you think of building a new barn or remodeling the old one.

Write us at once—even if you are not ready to begin work—and get the immediate benefit of this Free Barn Plan Service.

JAMES Manure Carriers
JAMES Feed Carriers

are a part of the JAMES Equipment, which includes Stalls, Pens, Stanchions, Etc., every part *exclusive* and *superior.* Here is the JAMES labor-saving carrier system on the famous Crabtree farm in Wisconsin—complete in every detail—showing how essential JAMES devices are to the thorough modernizing of a dairy plant.

Free Catalog No. 10—JAMES Stalls, Stanchions, Bull Pens, Cow Pens, Calf Pens and Box Stalls. Free Catalog No. 11—JAMES Manure Carriers, Feed Carriers, Milk Can Carriers and Feed Trucks. In writing, please tell us how many cows you own, whether you expect to build or remodel, and when.

GUERNSEY CATTLE

ITHACA, NEW YORK

JAS. A. POLLOCK ED. G. WOOLEY, Jr.

JAMES A. POLLOCK & CO.

Bankers and Brokers

SALT LAKE CITY, UTAH

February 2nd, 1914

Mr. Frank S. Peer,
Ithaca, N. Y.

My Dear Sir:--

On Wednesday of last week, January 28th, the Guernsey cattle reached my place at Richmond, Utah, apparently in good order and with scarcely a scratch. They came through in beautiful shape, largely due to your man's splendid attention to them during transit.

Am pleased to inform you that Dr. A. C. Young, State Veterinarian, has just reported to me on a visit he made to Richmond yesterday for the purpose of inspecting these cattle. He pronounces the herd about the best he has seen during his long experience with Guernsey Cattle and has written Governor Spry to the effect that the cattle are clean and in every way a credit to the State. Personally I am delighted with them.

Very truly yours,

(Signed) ED. G. WOOLEY, Jr.

The above refers to probably one of the most valuable live-stock transactions between parties who have never met each other. We shall have a large importation, about **120 HEAD** of all ages, arrive at New York the first week of April, all of which will be for sale. If you intend adding to your herd or to secure the foundation for a herd let us write you about this stock. We can please you just as well as Mr. Woolley and hundreds of our other customers.

Our Address after May 1st will be Osceola Farms, Cranford, N. J.

SARNIA

I am offering for sale a particularly choice lot of imported heifers, some of them in calf. By such sires as Princess's Jewel, Raymond's Pearl King, Gov. of the Chene, Justinee's Sequel of the Preel, and others equally as well known.

Also, some imported and home bred cows with Advanced Registry records, and some high class young bulls nearly all from Advanced Registry Cows. Personal inspection invited

Office, 700 Cedar Street, Milwaukee

Give us the Guernsey Cow for profitable dairying and there are none handsomer.

For building up a dairy herd from common stock, there is none to compare with the Guernsey sire.

The new list of young bulls, 8 months to 2 years old of the famous Yeksa and Materna families, recently issued by Helendale Farms, has met with so much approval, and is so nearly disposed of, that a supplementary list has been added, this giving a few more opportunities to secure a well bred sire at reasonable prices.

They are tuberculin tested and guaranteed. They will be disposed of in the order in which acceptances are received.

List on application to above address.

OFFERING OF IMPORTED GUERNSEYS

My recent importation consisted in large part of heifers not bred. A selection of twenty-five can now be offered that are safely in calf to the undermentioned.

MAY ROSE BULLS

and the resulting progeny should prove highly desirable since heifers and service bulls alike, are of the most popular breeding

Imp. Itchen May King 25174

SIRE—Imp. Itchen Red Raider 27342, by Imp. Moss Raider 22155 out of a full sister to Imp. May Rose King.

DAM—Itchen Verbena 5501 E. G. H. B. by May Day 1132 E. G. H. B., who sired the renowned Itchen Daisy III 15630.

This young bull is a superb individual—a worthy son of a famous sire and his extended pedigree shows five crosses of May Rose blood, through the best channels.

Don Bernardo of Linda Vista 20617

SIRE—Iethro's May King of Linda Vista 14591, own brother to Rose of Langwater 24204 (King of the May-Hayes Rosie) who holds third place in Class F. with record of 12966.50 lbs. milk—669.89 lbs. fat and third place in Class D. with record of 15008.20 lbs. milk—751.62 lbs. fat.

DAM—Rutila's May Rose 24946 who holds fifth place in Class E with record of 11415.75 lbs. milk—655.93 lbs. fat by Imp. May Rose King 8336.

This cow with her dam and grandam were the three best cows bearing this relationship, that I have ever known.

Langwater Guernseys Are Producers

LANGWATER Dorothy 27944, has established a **precedent** for the cows of the Guernsey breed by making a record of 16099.7 lbs. milk and 781.51 lbs. fat as a three and one-half year old and **carrying** her **calf** seven months while doing so.

This is not only the highest record of the breed for a cow carrying her calf this length of time while on test, but it places Langwater Dorothy seventh among the Advanced Register cows of the breed as a milk producer. Langwater Dorothy is a daughter of King of the May and stands first in milk production and second in butter fat among his daughters.

Langwater Dorothy 27944

2 year old record: 13022.7 lbs. milk; 649.78 lbs. fat.
3 1-2 year old record: 16099.7 lbs. milk; 781.51 lbs. fat.

Special Open Meeting, Western Guernsey Breeders' Association, Thursday, March 12th, 9.30 a. m., at Agricultural Hall, University of Wisconsin, Madison.

Beauty versus Utility

A remarkable interest seems to be taken in the question of the fixity of type among the Guernseys. It is surely encouraging to see the excellent work along the line of production that is being done among the Guernseys and to see this cropping out here and there in the breed. It can reasonably indicate that this characteristic is being well established. Even back in the early history of the Island we find the Islanders rating their cow as "The Old-Time Yellow and White Cow,—The Farmers' Dairy Cow."

It may be true that there has not been a great deal of attention paid to the breeding for a uniform type, but is not this from one standpoint a fortunate feature? The laying of the other excellent foundation gives the breeder of today and the future an excellent opportunity to work on. A prominent breeder once remarked: "To me the Guernseys are the most interesting of all the breeds to breed. Their lack of fixity of type is far from being detrimental. It makes our problems and our future all in front of us. The fixing of a definite type becomes most interesting work."

That there has been some improvement made along the line of better conformity, and more uniformity of characteristics is not to be doubted. Let us hope that the conservative work which has been done in the past will characterize the future so that the productive qualities now so well established will not be impaired.

Close of Volume of Herd Register

The registrations of bulls and cows published in this issue carries that of the bulls to 27000, that of the cows to 48000 and the A. R. to 2500. This closes Volume 28 of the Herd Register.

During the months in which the register has been published in the Journal, there have been saved a certain number of extra forms. These will be bound in permanent shape so that those breeders who care for same can secure them. It will constitute Volume 28 of the series of the Herd Register.

Guernsey Breeders' Associations

It is encouraging to note the number of Guernsey Breeders' Associations now in existence, State Associations are now in Maine, New Hampshire. Massachusetts, Connecticut, New York, Pennsylvania and New Jersey, Ohio, Indiana, Illinois, Wisconsin, Iowa and the Southwestern Association at Kansas City. All these are doing fine work for the dissemination of the breed.

N. H. Guernsey Breeders' Club.

A few interested breeders issued a call to the breeders of New Hampshire to meet at the time of the State Dairymen's Association and organize a New Hampshire Guernsey Breeders° Association. Nineteen breeders responded to the call and met at Concord, New Hampshire, February 12th and organized the Association. The following officers were chosen: President, F. W. Davison, Hanover; Vice President, Arthur Bruce, East Canterbury; Secretary, Harold H. Blake, Concord; Treasurer, John B. Jamison, Antrim, The Executive Committee included the above and Charles D. Atwood, Lisborn; A. W. Griswold, Hancock; P. J. Connor, Newmarket; F. O. Melvin, Bradford, and Wm. H. Caldwell, Peterboro.

Ohio Guernsey Breeders' Association.

The annual meeting was held in the auditorium of the Woman's Building at the State Fair grounds February 6, following the State Dairymen's Convention.

President Elbert H. Baker reported a good increase in membership during the year and plans for still more effective work were considered, especially along the lines of advertising, so that people in the state might know who had stock to sell.

E. A. Bishop gave some data regarding the A. R. work and its value to the breeder in setting herd standards. The relative number of bulls and cows being registered was commented on as showing the popularity and demand for Guernsey bulls in Grade herds.

Prof. C. C. Hayden of the Dairy Division, Experiment Station, talked on the matter of dispersion, and Prof. Oscar Erf on the relation of type to function, stating that no man can pick out the 900 from the 400 pound cow.

It was voted to send a telegram to Capt. E. B. Cassatt of Berwyn, Pa., congratulating him on the great work of his cow May Rilma, and wishing him a successful completion of her possible world's record.

The officers elected for the ensuing year are:—Elbert H. Baker, Gates Mill, President; R. D. Gates, Novelty, Vice-President; H. A. Lehman, Troy, Secretary and Treasurer. Plans were made for continuing the summer meetings which in the past have been so enjoyable and profitable to the breeders.

KING OF THE MAY AND HIS HOME

PROBABLY the most sought after and therefore, the most popular strain of Guernsey cattle in America to-day has been developed at Langwater Farms, No. Easton, Massachusetts. Not only has Mr. F. Lothrop Ames, the proprietor, through his careful study of the Guernsey been able in the last ten years to bring together, breed and develop many of the leading producers of the breed, but he has also developed a type of animal that holds first place in the show ring. Not the least among the many factors which have made up his success was the purchase from H. McK. Twombly in October, 1903, of the eight months old calf Imp. King of the May 9001, A. R. 72, who is still on the place and used intensively for service. This great bull was sired by Imp. May Rose King 8336, sire of one advanced register son and nineteen advanced register daughters among whom are the animals Rosa Rubra 17327 A. R. 1741 with 14,329.15 pounds of milk and 788.89 pounds of butter fat, and Florham Daisy 18115 A. R. 792 with 14,876.60 pounds of milk and 747.08 pounds of butter fat. His dam, Imp. Itchen Daisy 3d 15630 A. R. 100 has two records, one of 9,958.70 pounds of milk and 533.83 pounds of butter fat as a two year old, and 13,636.80 pounds of milk and 714.10 pounds of butter fat as a four and a half year old, and is the dam of Florham Daisy mentioned above, who is a full sister to King of the May, Langwater Dairymaid 26377 A. R. 1460 with a record of 11,782.90 pounds of milk and 631.50 pounds of butter fat., Itchen Daisy's May King of Langwater 17349, who sold for $1,800 at birth and Ne Plus Ultra 15265, who sold for $1,200 at birth. This cow with the exception of her son, King of the May, has undoubtedly exerted a greater influence in the herd than any other one animal.

King of the May, himself, has ten advanced register daughters, and two advanced register sons, his best daughter being Langwater Hope 27946 A. R. 1978, who as a two and a half year old leads the class with a record of 15,078.8 pounds of milk and 773.59 pounds of butter fat. Running . She is the dam of Langwater Mary who won second prize in her class at Framingham and the National Dairy Show and third prize at Brockton in 1912. Langwater Hope's dam, Imp. Itchen Lily 5th 23540, has one other daughter in the advanced register which is Imp. Langwater Lily 26606 A. R. 1409, with a record of 7,739.20 pounds of milk and 427.17 pounds of butter fat as a two year old.

His next best daughter is Langwater Dorothy 27944 A. R. 1822, who has a two year old record of 13022.7 pounds of milk and 649.78 lbs. of butter fat. She has just completed a three and one half year old record of 16099.7 lbs. of milk and 781.65 pounds butter fat, having carried a calf during seven months of her period of testing. This is the largest Advanced Register record of any cow of the breed who has carried a calf for seven months. Her dam, Imp. La Belle Petite 18114 A. R. 793, made, as a three year old, 12311.2 pounds of milk and 547.80 pounds of butter fat.

His next best daughter is Langwater Rosie 21333 A. R. 1563, who as a five year old made 15,083.00 pounds of milk and 724.23 pounds of butter fat, and was second prize aged cow and won the Grassland Farms cup at Framingham 1911. She also won second prize in a one day test and second in the Inheritance, Breeding and Production class at Framingham in 1912. She is the dam of Rose of Langwater 24204 A. R. 1445 who as a two year old made 12,966.50 pounds of milk and 669.89 pounds of butter fat. Her dam was the great Imp. Hayes Rosie 15476 A. R. 116 with 14,633.08 pounds of milk and 714.31 pounds of butter fat and dam of one advanced register son and two advanced register daughters.

His next best daughter is Langwater Princess 22138 A. R. 1044 with a record of 12,280.50 pounds of milk and 651.19 pounds of butter fat holding third place in her class as a two year old, and was third prize aged cow at Brockton, highly commended at Framingham and fifth prize junior advanced register cow at the National Dairy Show in 1912. Her dam, Imp. Princess Rhea 2d 16090 A. R. 433, has a record of 7,073.83 pounds of milk and 393.06 pounds of butter fat made as a two year old.

His next best daughter is Langwater May Queen 22141 A. R. 1043 who as a two year old made 11,275.70 pounds of milk and 592.84 pounds of butter fat, and was fourth prize aged cow at the National Dairy Show and at Brockton in 1912. She is the dam of Langwater May Queen 2d 34754, who milked over forty five pounds of milk a day with her first calf, and Langwater Pencoyd 21830, sold to Roberts Brothers, Bala, Pennsylvania, where he is being used on their young

stock. Her dam, Langwater Heiress 19142, is a daughter of Imp. Hayes Rosie 15476 mentioned above.

His next best daughter is Langwater Daisy 22139 A. R. 1042, who as a two year old made 10,710.30 pounds of milk and 557.55 pounds of butter fat, and was sixth prize Junior advanced register cow at the National Dairy Show in 1912. Her dam, Imp. Melanie of Goodnestone 3d 15485 A. R. 253, as a two year old made 7,415.50 pounds of milk and 387.76 pounds of butter fat.

His next best daughter was Langwater May Rose 19143 A. R. 683, who as a two year old made 9,212.50 pounds of milk, and 530.06 pounds of butter fat. Her dam, Imp. Royal Rose of Easton 15483 A. R. 147, has a record of 9,576.90 lbs. of milk and 517.80 lbs. of butter fat as a three year old, and is dam of one advanced register son and two advanced register daughters, one of whom is Langwater May Rose and the other Langwater Milkmaid mentioned below.

His next best daughter is Langwater Felois 19146 A. R. 684 who as a two year made 9,445.-90 pounds of milk and 529.81 pounds of butter fat. She is the dam of Langwater Felois 2d 31569 who as a two year old made 9,685.10 lbs. of milk and 552.73 lbs. of butter fat and was first prize two year old at Brockton and the National Dairy Show and second prize at Framingham in 1912. Her dam Imp. Hayes Felois 2d 15478 A. R. 423 has a record of 7267.-83 pounds of milk and 384.15 pounds of butter fat, and is the dam of two advanced register cows.

Imp. Itchen Daisy 3d 15630.
Sire May Day 1132 E.G.H.B. Dam Daisy's Gem 3341 E.G.H.B.
Dam of Imp. King of the May.

His next best daughter is Langwater Milkmaid 27942 A. R. 1527 who as a two year old made 9,550.20 pounds of milk and 510.05 pounds of butter fat, and was the first prize three year old at Framingham and Brockton, and third prize at the National Dairy Show in 1912. Her dam, Imp. Royal Rose of Easton 15483, was mentioned above under Langwater May Rose.

His next best daughter is Sister Sue of Langwater 21335, record 10290.7 pounds of milk and 469.60 pounds of butter fat as an aged cow.

His next best daughter is Hayes Queen May 21052 A. R. 675, who as a two year old made 7,904.3 pounds of milk and 406.94 pounds of butter fat and is the dam of Queen May of Ingleside 23596 A. R. 1135, who as a two year old made 5,287.00 pounds of milk and 309.02 pounds of butter fat.

Beside the above mentioned daughters, King of the May has the following who are under test:

Langwater Pauline 33566, as a three year old, 2345.9 lbs. of milk and 114.04 lbs. of butter fat in 59 days.

Langwater Francaise 35751, 5193.0 pounds milk and 218.19 pounds butter fat as a two year old in 164 days.

Langwater Pride 35752, 1344.0 pounds milk and 57.93 pounds fat in 37 days as a two year old.

Langwater Early Rose of Raritan 35994, 3758.8 pounds milk and 165.93 pounds butter fat in 119 days as a two year old.

Besides the above advanced register daughters, all of whom are owned at Langwater, with the exception of Langwater Rosie and Hayes Queen May, King of the May has sired twenty heifers on the place not yet in milk, and has won the following prizes in the show ring. He was first prize bull and get at Framingham and Brockton, and won first and fifth and the Ettinger trophy on get at the National Dairy Show in 1912. In the aged bull class, he was third at Brockton and fourth at the National Dairy Show. Other of his get that have won individual prizes are Langwater Pauline 33566, first prize senior yearling heifer at Brockton, and the National Dairy Show and third at Framingham in 1912; Langwater Pride 35752, very highly commended at Framingham as a yearling, fourth at Brockton, and second at the National Dairy Show in 1912; Langwater Rosamond 37849 was first prize junior yearling heifer at the National Dairy Show in 1912; Langwater Priscilla 37851 highly commended at Framingham and fourth as junior yearling at the National Dairy Show in 1912; Langwater Faithful 39949, third prize junior yearling at Brockton 1912; Langwater Fisherman 21873 second prize junior bull calf at Brockton and first at the National Dairy Show in 1912; George Washington of Fairfield Farm 10866 second prize aged bull at the National Dairy Show in 1912.

A good many of King of the May's grand-daughters have turned out to be remarkable producers, as, for instance, Rose of Langwater 24204 A. R. 1445, who stands third in the two and one half year old class with a record of 12966.5 pounds milk and 669.89 pounds butter fat. This cow also stands third in the three and one half year old class with a record of 15008.2 pounds milk and 751.62 pounds fat. Another grand-daughter is Langwater Dairymaid 26377, A. R. 1460, record as a two year old, 11782.9 pounds milk and 631.50 pounds butter fat. Other grand-daughters who have been tested are as follows:

Langwater Nancy 27943, 10913.9 pounds milk and 630.60 pounds butter fat at two years.

Langwater Felois II 31569, 9685.1 pounds milk and 552.73 pounds butter fat as a two year old.

May Belle of Linda Vista 29679, who stands fourth in the two and one half year old class with a record of 11,985.8 pounds of milk and 652.20 pounds butter fat.

These grand-daughters seem to be breeding on, and producing as well, if not better than his daughters, which shows the prepotency of this great bull as a sire.

Two of King of the May's grand-daughters, Rose of Langwater 24204 A. R. 1445 and Langwater Dairymaid 26377 A. R. 1460, both by Jethro Bass 11366 have been developed at Langwater and hold advanced register records of 669.89 and 670.12 pounds of butter fat respectively.—H.

Advanced Register Work in the Guernsey Breed

By Mr. Robert Scoville, Chapinville, Conn.

Read Before Connecticut State Dairymen Association
Hartford, Connecticut

I am aware that I have chosen a subject which exceeds my ability to present to you, and probably your patience as an audience to receive. Nevertheless, there is something about record making of any kind which appeals to a very primal instinct in man. The announcement of a world's record, whether it be an altitude flight for aeroplanes or a deep dive for submarines, is a matter of universal interest, and justifies cable tolls to the uttermost parts of the world. So I think any effort to exceed what has been done before makes a powerful and gripping appeal to men who have the fighting spirit in them.

When the first records were announced, I do not know. It was, I think, back in years that were sometimes characterized as the "Jersey craze," in the late 70's or early 80's, that there began to be announced to a rather incredulous public a series of records, mostly for a short time, one, three or seven days, and all expressed in pounds of butter. It was very soon seen that these records would not obtain anything like the credence from the public that they were entitled to. They were strictly ex parte matters; no one was present to witness the performance except the very much interested owner; and the owners very naturally took every possible advantage that could be taken of the conditions surrounding the record. I suppose without any doubt that the credit for removing this difficulty first rests with the Holstein Fresian Association, who began sometime in the 90's to have their tests supervised, first by a representative of their club, and then, when they found that while it answered as between their breeders it didn't necessarily answer as between their breed and other breeds, they called in the Experiment Stations to assist in performing these tests.

These records, as I said, were expressed in pounds of butter, and that was an unsatisfactory condition because it resulted in a partnership competition, in which the butter-maker played a not unimportant part. About 1890 Dr. Babcock invented, and with a generosity that deserves praise wherever his name is mentioned dedicated to the public, a process which made available to everyone a simple, accurate and efficient means of determining the butter fat content of milk.

In 1899 the American Guernsey Cattle Club organized what is known as "Home Butter Fat Tests." Now, in passing, I want to call your attention to that word "Home," showing that as long ago as that it was recognized that the proper place for a cow to demonstrate her ability at the pail was at home and not at a fair or exhibition as had been the case in so many of the previous records. We still adhere to that; we still submit to the mature judgment of the public that no record made at a fair can possibly be made under normal conditions. We have set our face like flint against that practice, and we hope that in time the public will be sufficiently educated to forever eliminate that particular form of foolishness.

These butter fat tests in 1899 met with considerable success; in fact, they met with some rather surprising successes. They were simply home tests. The man did nothing but send a sample of milk to the Experiment Station to have it checked up. It was still the ex parte test I have spoken of before; but there were two cows that made over 700 pounds of butter fat; one 782, one 710; and four or five that made 600 or very near to it. It was advisable, of course, that these records be made authentic; and the next year,1900, these home tests, as they were called, were continued, with a test made by an Experiment Station inspector; in exactly the same form as the modern advanced register. That brought us to 1901, when it was a simple proposition to adopt the advanced register, which simply meant setting a low water mark on these home tests below which the test would not be accepted as a record. The low water mark was set at substantially a pound of butter a day, 360 pounds for an aged cow; and a reduction was made at the rate of 1-10 of a pound per day until two years of age, when the requirement reached 250 5-10 pounds. The 1-10 of a pound per day reduction was largely made as a matter of convenience, and it is surprising to find that in setting that figure they builded better than they knew, for, as a matter of fact, they hit upon an almost scientifically accurate reduction for age. At any rate, the figure still stands, and has not been seriously challenged. There was a milk limit of 10,000 pounds, marked down to 6,000 pounds for two years of age.

It is curious to read in the record of a meeting when the Advanced Registry was established, that this work was not inaugurated without the usual prophecy of disaster that invariably accompanies a new undertaking. One man had the boldness to say that he did not believe there were more than four or five cows in the breed that would be able to qualify, and that the whole breed would therefore be grossly discredited.

The first year these records were in operation fourteen cows qualified. That was not surprising because people had to have notice and time to prepare themselves in order to enter the test. The second year the success of the register was assured; over 100 cows being entered; and this number has increased constantly.

I don't wish to burden you with detail, which I know is always monotonous, but I can hardly avoid telling you what the advanced register work is, because it may be that some of you have not been very familiar with it. I can best describe very briefly how the advanced register record is made by telling you something of the functions of each of the three parties who enter into it. They are the Owner, the Experiment station, and the Club.

The owner fills the application on a form provided for that purpose; stating the name of the cow, the date at which he wishes her record to start, and on the back of it makes a tracing of her markings. This, with $5, is sent to the Club, and the record is started. All the owner has to do is to weigh the milk every single milking for one year, and each month report on a suitable form every milking, together with a statement of the feed given during the month, and give notice of the cow's having been bred. On completion of the record if the cow has qualified an addition fee of $5 is charged to cover the cost of publication.

The Experiment Station having received from the Club a notice that a certain cow on a certain farm is to start a record, the date being given, send their inspector on the next

trip to call on that farm, bringing a tracing with him which the Club has furnished so that he may be sure that the cow which he is to observe is the one which has been entered. The inspector stays for either one or two days, at the option of the owner, taking his sample of butter fat. Formerly he shipped the sample of milk which was tested for butter fat to the experiment station for analysis, but now, where the facilities are furnished, the analysis can be made at the farm. He has to see every milking at the farm, be satisfied that the milking and the weights are correct; and he also takes certain random milkings from the cow's record during the month. He immediately sends this report to the Club, and also reports to his experiment station the result of his observation. The experiment station figures up the amount of milk and the amount of butter fat and if they find that the cow is exceeding 2½ pounds of butter fat per day for an aged cow they immediately proceed with a retest. This is done so that the record may be checked up, and any abnormally high test be detected in time.

The Club—and this is the one part that is really important, and the part in which the Guernsey Association differs from most others—having received an application from the owner that he wishes to test a cow, together with this tracing, first of all satisfies itself that the man has the cow he thinks he has.

The Club receives month by month the reports from both the owner and the Experiment Station, as I have just explained, and a force of three or four clerks is maintained to watch these records; everything is carefully scanned and studied, and the merest irregularity calls for an immediate explanation. Our aim is to place these records as nearly beyond dispute as is humanly possible, and we have, I think, to a certain extent succeeded. For example, in cases where a record is likely to become a leader in its class, in addition to the automatic retest furnished by the Station, we arrange for a number of tests to be made by an inspector from a neighboring State. The effect of this is to secure greater confidence in the result.

One of the things which we have added recently, of great value and interest, is the publication of monthly credits; every month we publish an alphabetical list of breeders, the names of all the cows which they have under test, and also the credits given to each cow. The result is that there is no great surprise awaiting the public. You can look at the publication every month; you can learn what your neighbors' cows are doing, and if you have any reason to suspect that everything is not as it should be, you can even make a visit and satisfy yourself. The final publication of the register is in an attractive form, and includes, wherever possible, a picture and a full tabulated statement of the result of the cow's work.

These tests have been in operation for about thirteen years, and it is interesting to note that in this time we have completed—or had completed on December 15th—two thousand seven hundred records. At the present time there are 172 breeders scattered throughout the United States who are offering for test 1029 cows. The average of all the records made to date shows in even figures 8481 pounds of milk and 424 pounds of butter fat. The true significance of these figures can best be understood by comparing them with the average production of all cows in the United States, which is probably not far from 150 pounds of butter fat. I will not read to you many of the figures, but there are a few that stand out as rather interesting. The records are divided into classes for convenience at every half year: "A" being five years and over; "B" being between four and a half and five; and so on down to a class known as "G", which are classed as from two to two and a half years of age. In the senior class the top record is held by Spotswood's Daisy Pearl, 957 pounds of butter fat, 18600 pounds of milk. This record promises to be exceeded shortly by a cow named May Rilma, who promises to make something over 1000 pounds of butter fat unless she is interfered with in some way. She made 87 pounds of butter fat in December, and her top record last June was 103 pounds. Her milk record now amounts to 14764 pounds for 262 days; a very interesting performance, but of course it is hardly fair to mention this until it is completed. There is always a chance for a slip twixt the cup and the lip; but we feel that it is a source of gratification that the cow has been able to do so well as far as this.

There are a few records that I consider rather remarkable. One is a record made by a cow named "Azucena's Pride 2d" in the class between four and four and a half years, 16,200 pounds of milk and 855 pounds of butter fat. She had a record in the 2½ to 3 year old class of 706 pounds of butter fat; showing conclusively, as we have always claimed, that it is possible for cows to continue their record from one year to another. Dolly Dimple, as another illustration, made 705 pounds of butter fat in the 2 year class, and 14,000 pounds of milk; she was tested again between 3½ and 4 years and made the remarkable record of 906 pounds of butter fat; tested again in the senior class, over 5 years, 18,500 pounds of milk and 876 pounds of butter fat;—a further refutation of the claim that the cows are injured by these high tests. Miranda of Mapleton made four successive records that averaged 12,900 pounds of milk and 704 pounds of butter fat; and we have another cow which averaged 10,400 pounds of milk and 642 pounds of butter fat for four tests. So that you need not worry about the cows being injured by this type of advanced register work.

I said that it was at the option of the owners as to whether the cow should be tested one or two days. As a matter of fact, when we started we had a one day test. Then our good Jersey friends raised it to a two day test and we followed them up to that on the theory that we wanted to be as particular as anybody else. That stayed there for a couple of years, when there came protests from some of the smaller farmers that the two day test was burdensome for one reason or another. So we had some very interesting calculations made on that point by a statistician in New York and also by a Professor in a Western agricultural college, and we arrived at some very interesting results. After making a very careful calculation based on the material in our records it was found that the maximum variation which you could expect between the one day test and the two day test amounts to only twenty pounds. That is not the average variation, of course; the average is very much less; it is only three pounds; but the maximum variation whcih you might expect on the theory of probabilities was only twenty pounds. And I think the data upon that point is interesting for dairymen, because it shows how comparatively easy it is to know approximately what a cow is producing if the one day test method is sufficient to determine within twenty pounds the amount of butter fat which a cow is making. It was worked out on the question of the milk, also, and very much the same results were obtained. If, instead of weighing every single milking for the year you simply weigh one or two days' milkings in the month, and multiply that by the days in the month you can get within an equally close figure. We are not willing to do that because we do not wish to do anything that would discourage the system of daily weighing of the milk; we do not feel that any person, can properly feed the animal unless he knows exactly what milk is being produced day by day. So, we do not mean to accept that proposition, although as a matter of fact we are perfectly satisfied that you can get a fairly accurate result, in this way which would satisfy all our requirements.

There is one other point that may be of interest—and that is the question of these feed records. I think almost any dairyman would find it profitable and interesting to read some

of our advanced register records, because we publish there the very fullest feed records that we can possibly lay our hands on. We are constantly sending back to the owners—asking them to supply more data in regard to their feed; and you will find that there are two thousand or more very excellent feed rations worked out in our advanced register. And they differ from those which are supplied you by the agricultural papers in that they have actually been tried, and you can see the actual results.

There is one more question that has raised a great deal of discussion; and it is interesting to note that it started almost in the second year of the advanced register. That is the question of the length of time between calving. When we started to make the records it was very soon discovered that you could get more milk out of the cow if you delayed her calving. On the old fashioned system of calving once a year you would only milk her ten months in the year, whereas if you delayed the calving you would have twelve months of milking for the record. And it raised the more serious question as to whether the old fashioned theory of breeding a cow once a year—I am speaking now from the dairyman's point of view—might not be wrong. It may be that if you have to have two or three months of dry period that it would be more economical to space them a little further apart, and to have your cows calve say once in fourteen, sixteen or even eighteen months, because our advanced register records have shown that we can retain the milk flow down to the twelfth month with, in some cases, an almost imperceptible drop. In the case of this cow, May Rilma, that I have spoken of: her highest month yield was June, 1800; July, 1600; August, 1700; then October, 1700; November, 1650; December, 1560; showing that the cow is decreasing in milk very slowly. It would be a crime to take a cow of that type and compel her to dry off in ten months and to breed once a year. Nobody knows what the scientific discount is that should be allowed for cows carrying a calf. I think this is a question which experiment stations and breeders ought to give their serious attention to. We would like to make some adjustment by which we can punish or handicap the cow which fails to carry a calf during her period of advanced register, and only await the information upon which to base our action.

Last year we started an advanced register for grades. That sounds rather strange of course, but there have been a good many remarkable records made by grades, and we wanted to get them in shape to be preserved. We have one record of 16,000 pounds of milk and 723 pounds of butter fat; that was made in an Illinois cow test. This cow was exhibited in Chicago a year ago and caused a great deal of favorable comment, and many people were greatly interested in her. In this particular case we were fortunate in knowing where and when she was bred and the name of her sire. We hope to publish a list of these good grade records in cases where the ancestry of the cow is absolutely authenticated. The difficulty is that we offer the owner very little inducement, as we do not increase the value of his stock particularly because of the advanced register, especially as the progeny still remain grades.

There are always many inquiries as to the cost of this work. It costs about $30 per cow. $10 goes to the Club for their expenses in publishing and in supervising the record; and about $20 is the usual cost for the twelve visits of the Experiment Station man. Or course, these figures are an average, and the cost depends upon the number. If you have a number of cows, the cost is reduced considerably. For one cow the expense would run probably to $50, whereas in a good sized herd it would probably not be more than $5 a head. The University of Illinois, according to Kimball's Dairy Farmer, has kept a record of the sale of 350 head of registered stock, and they find that every advanced register cow had on an average $177 added to her value; and, moreover, the progeny, heifers and heifer calves, from advanced register cows brought on an average $130 more than those from dams without record.

I do not think, however, that we would be satisfied if all our work had amounted to nothing more than increasing the value of the animals in our registry. This is very worthy in its way, but there is, fortunately, something better than this. About a year ago we published for the first time a book known as the "List of Advanced Register Sires and Great Producing Dams," based entirely on these advanced register records. This is a list which enables you to trace the progeny of any cow or bull that has ever produced advanced register animals. As an illustration, let us take a bull called "King Coral," and see what is published about him. Here was a bull bred in the West. We published the name of his sire and the name of his dam, the date of his birth, the name of his breeder and the name of all who have ever owned him. We find that this particular bull is credited with twenty-three daughters and one son. Of these twenty-three daughters twenty-one achieved advanced register themselves, and here are published their names and records. The one other daughter who did not make the advanced register herself for some reason has left an advanced register descendant whose name is also given. The only son that this bull sired has himself sired advanced register stock. Similar information in regard to cows is also supplied in the list of Great Producing Dams, and you can readily understand from this illustration what an aid such a volume would be to the intelligent breeder.

The dairy people have, in my opinion, suffered because they have not done the systematic and intelligent breeding which has been done in other departments, and the reason is easily explained because after all, no matter how much we have heard about the real dairy type, nobody knows exactly what it is. There are a great many theories about this, and fortunately the theories are coming closer together so that some day we may hope to arrive at fairly definite conclusions. It is almost impossible to picture in your mind an absolute and definite form of what is the really producing cow. While we all think that we have some such form in our minds, it is well known that even the experts do not agree. I want you to notice for a moment what has been done in breeding the thoroughbred horse. I suppose any person familiar with these horses will tell you that today many horses known as "selling platers" would fifty or seventy-five years ago have been deemed worthy to compete for some of the classic stakes. How has this improvement been effected? In the first place some of the best brains of the world have been devoted to this particular subject, as a brief study of the list of owners and breeders of racehorses will readily demonstrate. Secondly, they have had a positive and proven performance upon which to base their breeding operations, and only animals of tired and proven merit on the turf have been used in the stud. We do not believe that we have discovered any sure and easy road to success in breeding. We are not able to supply the intelligence which will always be necessary to make a successful breeder, but we have through this publication of the list of Great Sire and Producing Dams supplied the positive proven performance upon which the breeder who brings intelligence to the task, may base his operation. Along these lines must lie our hope in improvement of the dairy herd, and we are glad to have been the instrument of providing this work which will prove of increasing value year by year.

Guernsey Jottings

A Young Herdsman with Glenwood of Mound City 25022.

Importation for Woodend Farm.

Mr. M. B. Wood writes: "I reached home on Wednesday night from Quarantine with the fourteen Guernseys recently imported by Mr. A. C. Loring for Woodend Farm. After seven days of unusually rough handling I got through without a scratch on the animals and only a few on myself. I consider them an exceptionally good lot; the two young bulls being out of high producing cows and having some May Rose blood on the side of their sires will make them valuable aids to May Rose King 2d who has recently come to the farm. Woodend surely has some bulls of which we can be proud. Among the heifers are Butter Girl 2d of the Gree by Conqueror 5th, and out of Butter Girl of the Gree, 530.93 lbs. fat at 3 yrs. 3 mos. Charmante's Beauty 2d by old Governor of the Chene and out of Charmante's Beauty, 545.06 lbs. fat at 4 yrs. 158 days. She is very generally considered to be the best daughter of Golden Noble II left on the Island, and having the Charmante line of dams does not hurt her any. Three other heifers in the lot are out of cows now in the Island test. I bought only one in milk, Gallienne's Caradoc, formerly Queen Caradoc IV. On my return I found her certificate of production from the Island Secretary.

Entered Test May 3, 1913, at 2 yrs. 108 days. Requirement for year 266.8 lbs. fat. **Produced 303.91 lbs. in 5 months 25 days.** I think she will make some cow. She is large for her age, will eat anything and everything she can get hold of, and has the capacity to convert it into milk and butter. She will freshen again in June, and we expect now to show her as a 3 year old cow at the Minnesota Fair."

Advance of the Guernsey in Minnesota.

The Guernsey breeders of Freeborn County held a meeting on January 10, and organized the Freeborn County Guernsey Breeders' Association with twenty-five charter members.

Some forty of the breeders in this section are using pure bred sires which should indicate that wide awake dairymen believe the bull is one-half the herd.

Mr. W. R. Sweet, who was elected secretary of the Association writes they hope to make this a center for this great breed of cattle.

Snowdoun Farm Guernseys.

Snowdoun Farm consists of eighty acres located a half mile west of West Salem, in LaCross Co., Wisconsin. It has been the home of Guernsey cattle for thirty-five years. The present herd consists of sixty head bred thirty years for size constitution and production. They are large with fine udders and teats, tuberculin tested and in the best of condition.

Endymion's Primrose A. R. 1229, 12314.00 lbs. milk, 656 lbs. fat. Weta A. R. 1041, 10470.70 lbs. milk, 588.23 lbs. fat. Yeksa Sunburst A. R. 1024, 11799.50 lbs. milk, 581.24 lbs. fat. Yeksalyd A. R. 1176, 11729.90 lbs. milk, 527.06 lbs. fat.

Many others have made or are making large A. R. records in the herd. Herd Bulls.

King of the May's King 20487. He is a son of the great King of the May and Martha Valentine A. R. 1674, 13462.60 lbs. milk and 648 lbs. fat. She is a daughter of Mary Nerio A. R. 1560, 13649.10 lbs. milk and 689.69 lbs. fat.

Stanford's Glenwood of Pinehurst 6th. His sire is a son of Stanford's Princess A. R., 12279.70 lbs. milk, 725 lbs. fat, and Glenwood Boy of Haddon, A. R. His dam is Selma of Pinehurst 4th, who is making over 600 lbs. of fat in A. R. this year. She is considered the best daughter of Selma of Pinehurst, who made in A. R. 760 lbs. fat.

H. W. Griswold.

Official Tests of Cows.

More cows owned by Wisconsin dairymen and farmers are being officially tested to determine their milk and butter fat producing capabilities than at any time in the past. At the close of 1913, 441 Wisconsin cows, representing all of the dairy breeds, were under semi-official tests, which number exceeds that of 1912 by nearly ninety head.

Testing is done by specially trained men working under the direction of the department of dairy tests of the College of Agriculture of the University of Wisconsin, which stands sponsor to the respective national breed-registering associations for all testing done in this state.

Guernseys now lead in the number of cows under test, there being 223 representatives of this noted Channel Island breed on production trial. The Holsteins follow with 106 and the Jerseys with fifty-two.—The Homestead.

Wisconsin Guernseys.

Because its excellencies were boldly championed by a few dairymen who had found that their favorite breed was well adapted to dairying under Wisconsin conditions, Guernseys have steadily gained in popularity among the dairymen of the state.

Until a census of the herds of the country was made by W. H. Caldwell, secretary of the American Guernsey Cattle Club, it was not known that there were more herds and more representatives of the breed upon Wisconsin farms than upon those of any other state. Nor was Wisconsin's standing in Guernsey breeding confined along to numbers, convincing as such proportions might be. Naturally, Wisconsin dairymen early employed the Babcock milk tester, the masterpiece of their own Dr. Babcock—to aid them in improving the production of their herds and in breeding animals capable of producing large quantities of milk and butter fat. In the great majority of cases, their purchases are made only after making a careful investigation into the production records of animals to be purchased and the ancestors of such animals.

In all of this work, dairymen are aided by the official testing done here in the state under the direction of the Wisconsin College of Agriculture, and the National Breed Association.

During the month ending November 10, 78 Guernsey bulls and 189 cows and heifers were purchased by Wisconsin dairymen. —The Lake Superior Farmer.

For Pure-bred Guernseys.

Please balance the ration for pure-bred Guernseys, basis 1000 lbs. weight, giving from three to four gallons of rich milk per day: Corn, $.75 per bu.; corn silage; clover hay, $15 per ton; ground corn and cob meal; mill run bran, $25; cottonseed meal, $30.25; alfalfa hay, $18. I have sufficient silage and also clover hay and corn.

Springfield, Mo. L. S. M.

For a herd of Guernseys, such as described in the above inquiry, a ration made up of the feeds suggested should be found satisfactory for most of the animals of the herd. As a foundation ration we would recommend about three pounds of corn silage and one pound of clover hay per hundred pounds live weight, this roughage to be supplemented by a grain mixture of 400 pounds corn and cob meal, 200 pounds wheat bran, and 200 pounds cottonseed meal. For average cows about one pound of this grain will be required per day for every pound of fat produced each week.

The grain ration would probably be better suited for extremely high producers if ground corn were used in the place of corn and cob meal. The cob has comparatively little nutritive value and if the grain mixture is fed with the silage its presence is not necessary to give bulk to the mixture. —Hoard's Dairyman.

A Few Words for The Journal.

The American Guernsey Cattle Club:

I wish to embrace this opportunity to express to you my appreciation of the splendid magazine which you issue, and I believe that it is doing very much toward advancing the interest in the breeding of Guernsey Cattle. I am taking great interest in the Guernsey, and eventually hope to have my herd nothing but advanced registered stock. R. S. W.

A Party Writes to A Breeder.

I could not help but smile at your pamphlet, "A Few Reasons Why You Should Get The Guernsey for The Dairy." I am trying my best to get a Guernsey, and don't seem to be able to do so either from you or anybody else. I mean a cow that is good in every respect, at a price which is not prohibitive.

Prefers the Guernsey.

Do you prefer Guernsey cows to Jerseys for milk? Could I get Guernseys in Florida? Has any one tried Ayrshires in Florida or the South? Are they good dairy cows?

Since you ask the direct question whether I prefer Guernseys or Jerseys for dairy purposes, I will say that I do prefer the Guernseys after considerable experience with both breeds. They are larger and produce more milk than Jerseys, and the bulls are much easier to handle. I also like the spotted colors better, but I realize that the majority of people prefer solid colors. The question of securing the Guernsey at a reasonable price is the greatest difficulty. I do not know of any one in Florida that has any for sale. I have a couple for my own home use, but do not wish to part with them. You might get some from Mr. John Lillie, Smith's Station, Ala., or from Fern Crest Dairy, Sandersville, Ga. Write to W. H. Caldwell, secretary of the American Guernsey Cattle Club, Peterboro, N. H., for list of breeders in the South and a copy of the Guernsey Breeders' Journal. C. L. W.
—Southern Ruralist.

A Good Guernsey Grade

Cinderella and her first calf.
Owned by Miss Laura Farrar, Elkhorn, Wis.

To Avoid Trouble, Sympathize by Phone.

Madison, Wis., Feb. 2.—"Regard contagious diseases of animals as if they were small-pox with man, and such diseases will soon become less common, kill fewer animals, and cause less loss," is the advice which Dr. A. S. Alexander gives to farmers who make inquiry upon communicable live stock diseases.

It is a wise and profitable policy," he adds, for every farmer to keep away from farms and other places where outbreaks of contagious disease have occurred. It is equally important to prevent people or dogs from coming from such places onto the home farm. Do the sympathizing by telephone and abandon the old time dangerous practice of discussing the matter in the pens or on the fence.

Dr. Alexander firmly believes that every farmer should quarantine animals purchased by him until he is sure that they are strong and healthy. He favors the holding of auction sales under the control and supervision of state sanitary officials. He argues that in this way there would be less opportunity for the spread of diseases afflicting horses, cattle, sheep, and swine.—University of Wisconsin Press Bureau.

Pergue Farm Notes.

Sass Bros. have purchased 300 acres of fine land, located four miles west of Streator on the Peoria branch of the Chicago and Alton R. R. at the station of Munster. The dairy barns are just across the tracks from the depot and six daily trains stop at the farm, so any one wishing to visit Pergue Farm after March 1, can easily get there. They expect to erect a large dairy barn on their new farm as soon as the weather will permit, and it is their intention to make this one of the most up-to-date dairy farms in the state. They have just recently purchased the yearling bull Anna Dean Prince. He is a grand son of Spotswood Daisy Pearl, and his dam is just finishing her second record with about 650 lbs. of fat. His granddam on his dam's side has a record of about 670 lbs.

This young bull's pedigree is one of the best as he traces to many noted animals on both sides, and as an individual is second to none.

From Office Correspondence.

Guernsey Cattle Club, Box H D:—

Gentlemen, if your association publishes a periodical, please enter me as a subscriber. I want to learn all I can about the Guernsey Cattle. I am starting a hundred cow dairy on two or three sections of stump lands and I want to find a breed of cattle which will rustle like Goats and milk like a hose connection to water works.

I want to head the herd of cows that I will pick up with a bull from a family and a breed which will eventually make the herd uniform and I don't want an animal in five years that will produce less than 12000 pounds of milk in a year. If your bulls can make this kind of herd, it is up to you breeders to show me, and I will buy some.

P. S. I would like to find a bull somewhere near here that had demonstrated himself but that had to be exchanged to make a change. You might arrange it.

Another Writes.

I am an old duffer, but young in the cow. I have a good opinion of Guernseys, so far as I know about them. (Also of Ayrshires). I want to ask—what is a Grade Cow? There are so many grades, high and low, large and small, good and bad, that I don't know how to apply it as is intended in this case.

I am advised to get a grade cow, bred to a standard bull to get best results at a fair price.

I suppose it means a high grade cow, unregistered. One that has all the requirements, but not registered.

That's what I want—I cannot afford to pay $200.00 a yard for 25c ribbon. Can use the cow, but not the dress goods. Just what I want is a cow not over five years old that is bred to a bull that is O. K. to raise the calf if it is's a heifer, but cannot pay only the grade price as I understand it. Where can I find such a cow and at what price?

Possibly a couple of two year old heifers that are coming in in September or October would do the trick, would they? Of course, I want the real Guernsey blood. Color, shape, size, etc. If grade means a cross breed, I don't want it. Or a cow without horns, I don't want her.

I am willing to pay a fair price, but cannot pay fancy prices. (I have paid $30.00 for a rooster that made a very poor stew). Any information you may wish to give me will be appreciated.

I know all the cow traders about this section, and compare notes etc. with them, and I don't want them to get the laugh on me, so post one up a little.

The cows used about here. Lots of Holsteins, Jerseys a few Ayrshires, and very few Guernseys. (No Holsteins for me).

My idea now is "Guernsey."

Notes from Maple Farm of Midlothian.

Mr. Walter A. Cook, Manager of Maple Farm, reports the sale of a very promising bull calf to David Schwantz of Cullom, Ill. This young man, who is still in his teens, showed immediately by his business-like manner that he knew what he wanted.

The sire of this bull is George Washington of Fairfield Farm, and his breeding and history need no comment. The dam of this calf was Pretor's Jessie, a daughter of Pretor and out of a sterling cow that had never been tested.

Pretor's Jessie finished her Advanced Register test in September with a record of 574 lbs. of fat. She calved again Nov. 15, dropping a bull calf, George Washington of Midlothian, which we have recently sold to Mr. Schwantz. Pretor's Jessie started on Advanced Register work again, and during the month of December made 74 lbs. of fat. The purchase of a calf carrying such bloodlines speaks well for the future of Mr. Schwantz' Guernseys.

Annual Meeting Fort Atkinson Guernsey Breeders' Association.

The Fort Atkinson Guernsey Breeders' Association held its annual meeting at Fort Atkinson, Wisconsin, Jan. 17, 1914.

The following officers were elected: S. A. Merriman, Pres.; Ralph Tratt, Vice Pres.; W. J. Heid, Sec.; Chas. L. Hausz, Treas.

An Executive Committee was appointed which consists of the following members: S. A. Merriman, Ralph Tratt, Chas. L. Hausz, Wm. R. Boes, and Wm. J. Heid.

Last year at our annual meeting it was thought advisable to have a banquet and as it was such a great success, we will give another this winter. The President appointed Rush L. Chapman, Ed. Kiesling and W. J. Heid as a committee to make arrangements for a banquet. The association has about fifty active members. The members of the association report a very successful season the past year.

W. J. Heid, Secretary.

Minnesota Guernseys.

Mr. J. P. Jensen of Le Roy, Minnesota, writes us he has kept a record of the production of his herd for five years and does not consider that he could do any dairying without the records.

The picture shows his heifer, Imp. La Petite Jaune II 37744, who dropped her first calf when 2½ years old. She produced 290 lbs. of butter fat at a cost of nine and one half cents per pound, returning $3.40 for every dollar expended. Her average test was 5.56%.

Mr. Jensen also has a number of grade yearling heifers, which look very promising.

Imp. La. Petite Jaune II. 37744

Dam On Guernsey La Petite Jaune (R. G. A. S. 3665 F. S.)

Guernseys in Ice Cream Business.

Pemigewasset Farms, located at Plymouth, N. H., and owned by Mr. Earl B. Rose, have developed a very fine business supplying ice-cream in the summer section of the Pemigewasset valley.

At the recent 150th anniversary of the town, the farms had a display of which the picture is shown elsewhere in this issue. They are breeding both Guernsey and Holstein cattle. By keeping the two herds they have been able to get the most satisfactory grade of milk and cream for their purpose.

This is certainly an advantage in adding to a low grade milk the additional richness, color and fine flavor of the Guernsey.

Connecticut Dairymen's Convention Hartford, Conn.

THE officials of this Association gave up one session to the Guernsey as a breed. The session opened with an address delivered by Mr. Robert Scoville, Chapinville, Conn., which will be found printed in full elsewhere in this issue.

The second address was delivered by Mr. Charles L. Hill, of Rosendale, Wis. This address was illustrated with lantern slides showing the Guernsey in its native home, the Isle of Guernsey.

The Connecticut Farmer has the following to say:

"Mr. Scoville had the handling of the subject, "Advanced Registry Work in the Guersey Breed." It is doubtful if any one man could have been found who knows more about the subject. Grassland Farms is the home of one of the greatest herds of Guernsey cattle in the world. Forty-four cows at this farm have been admitted to the advanced register. Of still greater importance is the fact that Imp. Masher's Sequel, the bull at the head of the Grassland Farms' herd, is the sire of fifty-two advanced registry daughters. Mr. Scoville is a splendid speaker, every sentence he utters has a distinct and positive meaning, and the busy man that he is he has no time to waste upon idle talk.

The second address of the morning session was delivered by Mr. Charles L. Hill of Rosendale, Wis., the president of the American Guernsey Cattle club. This address was profusely illustrated with lantern slides showing the Guernsey in its native home, the Isle of Guernsey. For more than an hour the audience had the pleasure of listening to Mr. Hill relate his personal experiences upon his many trips to Guernsey made for the purpose of buying cattle and studying dairy conditions upon the island. The latter portion of his lecture was given to the description of several notable American Guernseys, whose pictures were thrown upon the screen.

The address was intensely interesting, aside from the fact that Mr. Hill is an exceptionally attractive speaker. It was one of the greatest sermons upon the subject of intensive agriculture that we have ever heard. This little island out in the channel of the coast of England, rough and rocky as it is in places, is one of the richest agricultural sections in the world, made so by instensive methods of cultivation and the breeding of high class cattle. Though the whole island is no larger than the town of Glastonbury in Conn., its agricultural exports amounting to $350 per acre per year. Its 15,000 acres of tillable land is reached by 550 miles of the finest improved roads in the world. Its greenhouse industry is enormous. The principal crop, grown under glass, is tomatoes. Grapes come second, then follow peaches and nectarines, all of which are grown under glass because of the humid climate and scarcity of sunlight. The trade of the island in cut flowers for the London market is one of its largest revenue producers. We will not attempt to tell the number of ships Mr. Hill saw at the docks being loaded with flowers at Easter time. The pictures included many of the old houses found upon the island and the great pride the inhabitants take in keeping their farms as neat and tidy as a millionaire's door-yard in the city. Mr. Hill said the people of the Isle of Guernsey reverence two things above all else, namely, their old homes and the fertility of the soil. This ought to make a deep impression upon American farmers. Reverence for home, and reverence for the fertility of the soil from which home comforts are derived. Alas! and alack! the majority of us think of home as a place in which to stay when there is no other place to go to, and reverence for soil fertility is about the last thing the most of us think of.

Indiana Guernsey Breeders Hold Annual Meeting at Purdue

ON Wednesday night, January the 14th, during the Farmers' Short Course at Purdue, the Indiana Guernsey Breeders' Association held its first annual meeting since it was reorganized. Although all who were present were not breeders of Guernsey Cattle, all were intensely interested in the promotion of the association which in turn has for its chief object the promotion of the interests of the breed.

Mr. W. Monroe Schlosser, Secretary-Treasurer, Frankfort, Indiana, gave an interesting report of the previous meetings and financial standing of the Association up to date. This was followed by short interesting addresses by Mr. James R. Garver, in charge of the Purdue Dairy Extension Department, by Prof. O. F. Hunziker, Chief of the Dairy Department, by Mr. R. E. Caldwell, Milk Production, Purdue, and by several of the breeders. Many advantages of such an organization were clearly brought out and emphazised. Such an organization is not only a great benefit to its various members and to the breed, but is a great boon to the dairy interests of the state and this in turn reaches the very foundation for the success of intensive Agriculture.

Chief among the methods used by the Indiana Guernsey Breeders' Association in promoting the Guernsey interest in Indiana, is the issuing of a monthly sale list of pure bred animals and grade Guernsey heifers for sale by the members of the Association. This list may be secured by any one who will request it of the Secretary, Mr. W. Monroe Schlosser, of Frankfort, Indiana. This is a worthy example that should be followed by the other State Dairy Breed Associations. Until we have more dairymen in this state using pure bred bulls of one of the dairy breeds we cannot hope for very rapid improvement of the deplorable sort of so called dairy cows predominating in this state. Until we have better cows we cannot hope to raise the shamefully low average yearly butter fat production records of our cows nor can we hope to rank higher among the dairy states than at present. Many dairymen have caught the spark of progressiveness and really desire to purchase a pure bred male. Knowing of none for sale in the state, their natural conclusion is that there are none nearer than some other state. It requires more courage to make an investment in a pure bred animal than many possess, and when it seems necessary to go a long distance at large expense to buy a pure bred animal they readily give up the idea. If they only knew of a pure bred animal of the desired breed in this state, they would be very apt to go, see and buy it, thereby starting on the road to success. There are many small breeders of pure bred stock of the various dairy breeds throughout the state who occasionally have a pure bred male animal for sale. However, as they are just beginners in the business, they cannot afford to run large advertisements in the several papers. Some may use the "want ads" of a few papers, and others do not advertise at all. In our various Farmers' Institutes and Dairy Meetings, the public speakers, after elaborating upon the great value and need in the use of the pure bred sire, are often unable to direct a prospective buyer to any breeder of the various breeds in the state or near by. If the secretaries of the various breed associations, like that of the Indiana Guernsey Breeders' Association, have available, at all times, a list of the pure bred animals for sale it would be a great aid in the sale of such animals.

Thus we see that it is possible for each Association to run a large and attractive advertisement of pure bred animals for sale at a slight proportionate expense. It is without doubt following such a movement that there would be an increase of the number of purchases of pure bred bulls, resulting in a larger and more rapid improvement in the average production of the cows of the herds thereby influenced. There are

Pemigewasset Farms Exhibit Celebrating the 150th Anniversary of Plymouth, N. H.

some 666,000 so called dairy cows in Indiana whose average is reported around 150 pounds of butter fat per year. With the use of good pure bred bulls it is quite possible in a few years to raise this average yearly production of butter fat 50 pounds. At 30 cents per pound for butter fat, such an improvement would mean an added yearly income from this one phase of agriculture of 10,000,000 dollars.

The Guernseys as a dairy breed are fast becoming popular in Indiana. The number of breeders have more than doubled since 1911 which indicates that the Guernsey with her excellent qualities and superior records is rapidly being recognized. The inquiries which are pouring in at the secretaries' office for pure bred males and females is an evidence that the interest in this breed is constantly growing and it is prophesied that during the ensuing year there will be many more dairymen join the ranks of the Guernsey Breeders. This with the interest that is being taken in the herd testing associations organized by Purdue throughout the state is a sure indication that Indiana dairymen are waking up along the lines of herd improvement. The demands for pure bred bulls of the four main dairy breeds, namely Ayrshire, Holstein, Jersey and Guernsey, are increasing gradually. This, followed by a more liberal use of the scales and Babcock tester, will insure greater prosperity and success for these dairymen.

The officers of the Association were re-elected for the coming year. They are, W. O. Mills, President, Mooresville, Ind.; Fred R. Davis, Vice President, Frankfort, Ind.; W. Monroe Schlosser, Secretury-Treasurer, Frankfort, Ind.; and an executive committee composed of Mr. L. C. Sanders, Acton, Ind., O. M. Worster, Warren, Ind., Clem Herschberger, Bremen, Ind., and Charles Arthur Carlisle, South Bend, Ind.

W. O. Mills

New Kind of Dairy Train for Iowa

The Iowa State Dairy Association recently completed arrangements with the Chicago, Burlington and Quincy Railroad to operate a special dairy train over the branches of this line in southern Iowa. The tour began on February 9, and was to continue until March 1.

The train was under the direct supervision of E. S. Estel, State Dairy Expert, and J. B. Lamson, Agriculturist for the Railroad. The special will differ from those conducted in previous years, in that the communities will co-operate to a greater extent in the meetings. Stops will only be made at towns where local interest is manifested, and the citizens of the town and the farmers of the surrounding country agree to advertise, exhibit cattle and assist in making the meetings large and successful.

The Burlington Railroad has operated two special dairy trains for the Iowa State Dairy Association in this same territory. These have accomplished a great deal, and have created a demand for more thorough information along the lines of dairying and intensive farming. It is to meet this demand that the Iowa State Dairy Association, assisted by the various other dairy interests of the State, has determined to carry on this new kind of campaign.

Exhibits of the various kinds of feeds, barn equipment and silos will be carried in an exhibit car. These will be more extensive than on previous trains, and will be designed to give the beginner practical illustrations of inexpensive equipment for the small dairy farm. In addition, the usual dairy cow demonstrations will be given, and specimens of dairy animals will be carried in a baggage car equipped as a model dairy barn.

All meetings will be held at town halls. This arrangement will enable the lecturers to talk to the entire audience at once and therefore, give more information in the same length of time. Lectures will be delivered to the city and rural school children with the idea of encouraging them to live on the farm. The boys of each community will be given an opportunity to enter a dairy cow judging contest, as well as a dairy record contest. The latter will be based upon records of the production of milk and fat in the herd three months from the date on which the train passes through each respective town. Prizes for these contests will be given by local merchants and business men.

In addition, an effort will be made to have a small dairy show of the cattle in each community. These animals will be scored and the owners advised as to how their herds may be practically improved by breeding and testing.

Southern Iowa, because of its natural conditions, is admirably adapted to dairying. Although this is true, only a small percentage of the creameries in the state are located in the southern half. The mild climate, the rolling land with its abundance of pasturage, soil which will grow alfalfa and all other legumes without the attention required in the north, and the proximity to good market, make this section one of the best for dairy purposes.

Heretofore, the farmers of southern Iowa have made dairying only a side line. They have in a large measure sold their grains directly from the farm, and as a result their soil has not been built up as has that in the northern part. They are now beginning to take a great interest in the problem of soil maintenance, and realize that the dairy cow is the best means of converting their feeds into profitable condensed products and at the same time return the manure to the land.

In addition to the activity of the farmers toward more intensive farming, the business men of the towns are coming to realize that the creamery is an excellent institution. They see a striking example of the benefits derived from a creamery by comparing the prosperity of the small towns where these plants are located with the towns that do not have them.

A special train of this nature will probably accomplish greater results in the same length of time than any other campaign which could be devised. Southern Iowa will undoubtedly become in the future as great a dairy section as the northern part.

Change of Name

The Insulation Department of the Armstrong Cork Company has been taken over and will hereafter be conducted by the Armstrong Cork & Insulation Company. The personnel of the management and the sales force will be the same as heretofore. The growing importance of their insulation business and the recent addition to their line, of steam pipe and boiler coverings (which contain no cork), rendered it desirable to make this change for the more satisfactory and efficient transaction of the Company's business.

Armstrong Cork Company.

News from the Island

Annual General Meeting Guernsey Farmers' Association

THERE was a large attendence of members of the Guernsey Farmers' Association at the annual general meeting of that body held at the Y. M. C. A. Rooms. The proceedings lasted about two hours.

Mr. James Martel, who occupied the chair for the preliminary business, asked the Secretary, Mr. A. Le Patourel, to read the minutes of the last general meeting, which were duly adopted.

The Secretary's report was then read.

In proposing the adoption, Mr. W. Mauger said he thought mention should have been made of the generosity of the Association and other gentlemen in providing such handsome prizes as those seen at the last Show. Without wishing to criticise the report he thought a paragraph should be inserted to that effect.

Mr. A. Le Patourel said the matter would be rectified, and thanked Mr. Mauger for pointing out the omission.

The report was then adopted.

From the Treasurer's report it was seen that the balance in hand at the commencement of last year was £30 1s. 0½d. The expenditure totalled £103 7s. 11d, or £5 13s. 7d in excess of the income, while the balance in the Treasurer's hands was £49 2s. 5½d. The accounts had been audited by Messrs. E. P. Mahy and Ernest de Garis. The present membership was 143.

Mr. James Le Page (Deputy) asked why the auditors appointed at the meeting last year had not acted in that capacity.

The chairman explained that it was owing to a misunderstanding.

Mr. Peter Martel, jun., invited Mr. Le Page to inspect his books, but the latter replied that he merely wished to raise the question on principle and was perfectly satisfied with the explanation. The report was eventually adopted on Mr. W. Mauger's proposition.

The chairman said the next business was the election of officers and members of Committee, but as some of the proposed alterations to rules would affect the composition of the Committee he thought it would simplify matters if the rules were revised first.

Messrs. T. M. Simon and James Le Page disagreed with the chairman's views, and proposed that the election be proceeded with.

The Hon. C. R. Molesworth said that he had but a faint notion of the arguments advanced, as up to this point all discussion had been in French, but he thought it would be a waste of time to elect members of Committee while a change was anticipated in the constitution of the Committee. If the election was proceeded with it would mean that ten members would not be eligible for re-election, and five was not a sufficient number to go on with.

Mr. W. Mauger warmly supported Mr. Molesworth. According to the rules the election of the Committee was annual, and his opinion was that no Committee should remain in office more than three years.

Mr. James Le Page said that the rule made last year provided for the retirement of three members.

The Chairman: How would you determine who is to come out?

The amendment to take the rules first was proposed by Mr. P. Martel, jun., and seconded by the Hon. C. R. Molesworth and carried by 14 votes to 11.

It was resolved that the following sentence be added to Rule 5, which deals with the membership status: "Or their sons if interested in farming."

Rule 6 related to the constitution of the Committee and gave rise to considerable discussion, but the rule was eventually adopted in amended form.

Rule 8 was also altered in accordance with the previous rule.

In Rule 9 a clause was proposed by Mr. John Le Page to the effect that the membership subscription should remain at 5s., but that coupons and tickets should be issued to members which would entitle them to entry at the shows. Considerable discussion ensued, and Mr. Le Page's motion was eventually adopted.

The election of officers was the next business.

In proposing the Hon. C. R. Molesworth for the post of President, Mr. T. Mansell Simon said he felt sure he had hit on the right man. His services were most valuable, and had been thoroughly appreciated by all who had collaborated with him in Committee. This proposition was duly seconded.

The Hon. C. R. Molesworth said he felt like "a square peg in a round hole," and, pleading ignorance of the French language, begged to be excused if he declined the honour.

Mr. M. Mauger, in supporting Mr. Simon's proposition, said Mr. Molesworth need entertain no fear in respect of the language question, as all the Committee members would only be too pleased to help him. (Applause).

Mr. Molesworth was then declared elected amid deafening applause.

Mr. James Martel was unanimously re-elected Vice-President, and Messrs. Peter Martel, jun., and A. Le Patourel, Treasurer and Secretary respectively.

In returning thanks for his re-election, Mr. Le Patourel said that after a man had served ten years, it should be time to replace him. He would do his utmost for another twelve months, but he wanted them to accept his resignation for 1915.

The following were elected to six vacancies on the Committee: Messrs. J. L. Le Page, E. T. P. Ozanne, Thos. Martel, Ernest J. Mahy, H. J. Ozanne, and John Bourgaize.

Mr. Dorey, son of the late Mr. Hirzel A. Dorey, was elected on the Committee to complete the unexpired term of his father.

Messrs. E. de Garis, James Le Page, and W. Mauger were appointed auditors.

It was decided to hold a show of cattle this year, and the details were left to the Committee, Mr. Mauger suggesting that the expenses in connection therewith should be considerably curtailed.

Mr. John Le Page was afterwards presented with a massive marble clock as first prize for owning the best cow in the Association, the animal being "Flora of the Briquet II," 8724 P. S., with a yield of 11,429 lbs. milk and 573.36 lbs. butter fat. Mr. F. Belloir received a plated rose bowl as second prize for "Cyrene d'Or."

Annual Report.

Mr. President and Gentlemen,—

In presenting this tenth annual report to the members of this Association, your Committee consider it may prove interesting to review what the Association has accomplished through its instrumentality, or in conjunction with the R. G. A. and H. Society.

From the first year of its formation the question of milk and butter tests engaged the attention of your Committee, who considered that the three day test under which such tests were then carried out, when cows were milking at their best, was both unreliable and misleading; therefore, in order to obtain more conclusive results, your Committee suggested to the Committee of the R. G. A. and H. Society that these tests should be held at three different periods during the cows' lactation. This system was adopted and followed out for over two years, but did not prove popular on the ground of its being too cumbersome, till finally your Committee recommended the adoption of the present system of a 365 day test now known as the advanced registry.

Considering that cows have to be fed and attended 365 days in each year, the adoption of this system will assist us in ascertaining which cow pays best for the feed and care bestowed on her.

While dealing with this subject, we would draw your attention to the completed records of 26 cows, whose average production of 9,692 lbs. of milk and 510 lb. butter fat is very creditable, and it is very interesting to watch the performance of quite a few cows at present under test.

The unfortunate discovery of tuberculosis in a few animals led your Committee to confer with the Committee of the R. G. A. and H. as to the best ways and means of preventing its spread; the question was fully discussed, and the concensus of opinion was that this dreadful disease had been introduced by some Island cattle having been in contact with tuberculous animals at shows in England. It was resolved to petition the Royal Court to pass an Ordinance empowering the Supervisor to take preventive measures to safeguard the interests of breeders and the health of the inhabitants in general.

Our authorities, acting on the recommendations of the Joint Committees, prohibited the re-landing of Island cattle, and passed an Ordinance empowering the Supervisor to order the slaughter of tuberculous animals. These measures, though considered at the time somewhat drastic, have so resulted in the control and decrease of the malady, that at the present day it is fairly safe to assume the number of tuberculous animals does not exceed one per cent., and we have every reason to hope that further legislation will soon be passed, and we are confident that if the suggestions which are to occupy shortly the attention of the Court of Chief Pleas are passed, the malady will disappear completely.

Your Committee, realizing that breeders who had animals slaughtered under the provisions of the aforesaid Ordinance were sustaining a serious loss, passed a resolution recommending that application be made to the States to make compensation for animals thus slaughtered; while at the same time your Committee went into the question of forming a Mutual Cattle Insurance Society to meet part of the loss incurred by breeders. This matter was referred to the General Meeting on Jan. 16, 1909, and approved, the Committee being authorized to frame rules for the formation of a Mutual Cattle Insurance Society. In the month of September that year, the Committee insured 629 head of cattle.

Considering that some of the Insurance members were not members of this Association, and had consequently no vote in the election of the Committee, it was considered advisable at the end of the first year that the Insurance be worked as a separate organization, with a Committee elected by its own members.

At the General Meeting, held on January 14, 1911, it was resolved to approach the R. G. A. and H. Society on the question of holding a cattle show during the latter part of August or early in September, and after some consideration the Society's Committee decided to hold a show, which was so well supported by exhibitors of cattle that this show has been repeated annually since that date.

From the date of its formation the Association had offered the following prizes, to be competed for annually at the R. G. A. and H. Society's shows:—A Challenge Cup for bulls; a Challenge Cup for cows; a special prize for the best bull and three of his progeny; a special prize for the best cow and three of her progeny; a special prize for the cow making best official milk and butter test; a special prize for the cow making the second best milk and butter test.

At an extraordinary general meeting held on March 30, 1912, after considerable discussion it was decided to hold a cattle show, under the auspices of the Association, on June 24, and to present the aforesaid special prizes heretofore offered at the Society's shows.

The Committee was authorized to carry out all the arrangements for the show, which was well supported by the members with 210 entries in the cattle section; the outstanding merits of the exhibits forcibly proclaimed that it is possible to combine beauty and utility or form and performance. The horse competitions, a new feature in the Guerney shows, proved a great attraction during the afternoon. The show was such a success that the Association felt justified in holding a show in 1913, which was quite equal to its predecessor, proving that the members of the Association appreciate any effort made in their interests. The cattle trade has been very prosperous during the year just passed, close on 1,000 head have been exported, 770 to the United States, the balance to England and other countries.

On the suggestion of Mr. W. Mauger—a suggestion which received the meeting's general approval—the Secretary was requested to place on record the Association's appreciation of the special prizes which had been presented for competition at the cattle show, both by members of the Association, as well as several gentlemen who were not members.—Guernsey Weekly Press.

Notice to Breeders

At a special general meeting of the Royal Agricultural & Horticultural Society of Guernsey, held on the 27th of November, 1913, the following resolutions were adopted, viz:

"That official sketchers and verifiers be appointed to specified districts by the Herd Book Council."

"That the period of sketching and verifying calf sketches be within seven days of date of birth, such sketch to be presented for registration at the Herd Book Office within the succeeding fourteen days, all sketches to be made in duplicate."

"That, subject to the approval of the Herd Book Council, members must register for their exclusive use, a word as prefix or suffix."

The Herd Book Council hereby inform Breeders that the above resolutions are now in force, and that the following sketchers and verifiers have been appointed:—

District No. 1 (comprising the parishes of St. Peter-Port, St. Martin's, the Forest and St. Andrew's, from Long Store, Bouet, Mont Arrive, Broack Road, Queen's Road, Belmont Road, Vauquiedor Lane, St. Andrew's Road from Vauquiedor to the Villiaze, Roullias Road, Rue des Auberts to Bourg and

Petit Bot, both sides of the above boundary).—Mr. S. G. Hubert, Les Grands Courtils, St. Andrew's.

District No. 1 (comprising the Vale, the Castel from Long Store, Bouet, La Vrangue, Roussaillerie, La Ramee, Longue Rue, Landes du Marche, La Charrue Road, Hougue du Pommier to Sea Shore, both sides of the boundary).—Mr. Arthur Breton, Swaziland, Vale.

District No. 2 (St. Sampson's, the drew's and part of St. Peter-Port, from Vazon, Le Gele, King's Mills Road, Le Groignet, Talbots Road to St. Andrew's Brickfield, both sides of the boundary to Districts No. 1 and 2).—Mr. Ed T. Le Page, Millmount, Castel.

District No. 4 (St. Peter's, St. Saviour's and St. Andrew's, from L'Eree Road to Brehaut Chapel, La Tourelle, Le Gron to Villiaze, both sides of the said boundaries of Districts No. 1 and 3).—Mr. J. Alles Simon, Le Rouvets, St. Saviour's.

District No. 5 (St. Peter's, Torteval and Forest Parishes, from boundaries of Districts No. 1 and 4).—Mr. . J. Tostevin, La Couture, St. Peter's.

Notice should be sent to the above sketchers within 48 hours of birth of calf.

Applications for prefixes or suffixes should be forwarded in writing, addressed to the Secretary, at the Office, without delay.

HENRY CARRE, Secretary.

—Guernsey Weekly Press.

Feeding, Standing or Lying Down The Cow is Comfortable

That's Why Louden Stalls and Stanchions Make Her a Bigger Profit Builder For You

The contented cow produces a better grade of milk and more of it. To be contented a cow must be clean and comfortable. Louden Stalls and Stanchions are strictly sanitary. They protect the cow from injury. They afford the greatest freedom of movement. They are convenient for the workman. They prevent waste. They take the drudgery out of the barn work. These qualities combine to make them a most valuable investment for any farmer or dairyman.

NOTE THESE DISTINCTIVE LOUDEN FEATURES

Louden Steel Stalls

Sanitary Construction.—No cracks or crevices to catch dirt and breed bacteria. Fitted throughout with overlapping, dust-proof malleable iron connections.

Protect the Cows.—No sharp projections about Stalls, Stanchions or Mangers. Every corner rounded and perfectly smoothed.

Louden Tubular Steel Stanchions

Single Chain at Top and Bottom—Strong enough to carry 5,000 pounds. Allows Stanchions to turn quarter way around. Cow can turn her head about freely.

Automatic Stock-Proof Latch—Closes with a snap. Can be opened with a single downward touch.

U-Shaped End—Permits Stanchion to be hung in Louden feed-saving, cut-out curb, only ten inches above stall floor. Gives cow ample throat room.

Exceptionally Strong Hinge—Made of refined malleable iron. Heavy bolt passes through four thicknesses of metal.

Slack Lower Chain.—Allows the Stanchion to swing several inches in any direction—Most flexible Stanchion made. Prevents cow from straining or injuring herself when lying down or rising.

The Louden Line Includes Steel Stalls, Tubular Steel and Wood-lined Stanchions, Feed and Litter Carriers, Barn Door Hangers, Hay Tools, Power Hoists, Etc.

Another Great Guernsey Auction

Cliola of Hillside 27517. Purchased by F. B. Smith of Terre Haute, Ind., for $700.00.

On February the tenth, nineteen hundred and fourteen, at Frankfort, Indiana, Mr. Fred R. Davis sold his registered herd of twenty head and thirty-one Grades. Several prominent breeders from Illinois, Indiana and Wisconsin attended the sale. Mr. Fred B. Smith, of Terre Haut, Ind., paid $700. for Cliola of Hilhurst 27517 after Edward A. Walter, of Walworth, Wis., ran her up to $675.00. Cliola of Hilhurst is a Grand Guernsey Cow: she is also a fine show cow. She is grand-daughter of Imp. Golden of Hero of L. Etennerie 12647. Also, a grand-daughter of Glenwood Chief of Haddon 7076, and a grand-daughter of Madame Tully of Riverside 11945, A. R. 361–8209.3 lbs. milk and 446.4 lbs. butter fat.

Edward A. Walter bought her daughter Cliolas Myrtle Golden Secret Eve of Walter Maple for $250.00. Her sire is Princess Corenna Second Prince 21792, a son of Ollies King of Belle Vernon. Princess Corenna 2nd Prince, dam Princess Corenna 2nd 25591, A. R. record 8486.2 lbs. milk and 452.59 lbs. butter fat. Her sire is Noble Count and his sire is Imp. Golden Noble 10508 who sired Golden Elsie A. R. record 15082.6 lbs. milk and 692.86 lbs. butter fat. The next highest cow was Emma B 20917, who was a line bred Glenwood Girl 6th cow. Some of the best blood lines of the breed were in the cows sold.

Colonel Fred Ruppert, of Decatur, was the auctioneer. Edward A. Walter, now President of the Western Guernsey Breeders assisted him by announcing from the stand the different blood lines of the breed.

Mr. F. B. Smith paid $185, for Beauty, a grade Guernsey. Twenty registered Guernseys sold for $4710.00, an average of $235.00.

The following is a list of the buyers and the prices paid.

Mr. F. B. Smith of Terre Haute, Ind.		
27517	Cliola of Hilhurst	$700.00
20917	Emma B	400.00

Glenburnie Guernseys

A Few Choice A. R. Cows Eor Sale

To Guernsey Breeders:—

Glenburnie Guernseys have demonstrated their ability as producers. Every cow old enough has qualified for the Advanced Registry, most of them with high records and three of them in one year admitted to the "Blue List." Up to the present time, I have sold no choice cow, but I have reached the limit of which my farm is capable. Inasmuch as some must be disposed of I now offer for sale three or four from the following list:

Name	A. R. Number	Class	Milk lbs.	Fat lbs.	
Indian Belle	22275	A	11797.20	490.92	
Oneida Belle	24985	E	11183.30	572.94	
" "	Re-entry	B	14000.	700.	estimated
Cayuga Belle	29774	G	9820.55	469.27	
" "	Re-entry	G	5102.10	232.17	113 days
Glenburnie Belle	2 yr. old heifer beignning A. R. Record.				
Glenellen	24984	E	9431.00	515.04	
"	Reentry	B	6029.90	305.32	143 days
Glenburnie Girl	2 yr. old heifer milking 40 lbs. a day.				
Brightness of Glen Glenburnie	30742	G	10080.00	553.28	
"	Re-entry	D	13300.00	720.00	estimated
Brightness 2nd of Glenburnie.	2 yr. old heifer now beinning record.

In this list are two or more representatives of three different families,all of them good individuals and high producers, and two imported cows of high rank, one them a daughter of Golden Noble 2nd. The quality of these cows, proved by their performance, justifies high prices—from $1000 to $3000 each according to the selection and family grouping. I invite inspection at any time, and will consider a proposition for any combination that suits the buyer.

My farm is situated three miles from Peekskill and about one hour from New York City on the New York Central R. R.

Annual Meeting Waukesha County Guernsey Breeders' Association, Waukesha, Wisconsin

Meeting called to order by the President, R. W. Rowlands.

President: Gentlemen, there are not a very large number of the members here as yet, but it is time to start, and we have some matters of business that are more or less a matter of form, and we will go through with them first. This is our eighth annual meeting, and our first business will be the secretary's report.

I wish that the members of the Association would fill up the front seats as much as possible, it will make it more easy for us, and I will ask Mr. Roberts and Mr. Love to see that the people who come in during the meeting are shown seats so they will not be seated in the back end of the room. That will facilitate matters somewhat.

The first order of business is the reading of the minutes of the previous meeting.

The minutes of the previous meeting were read as follows:

"Minutes of the Annual Meeting of the Waukesha County Guernsey Breeders' Association, held at the home of Mrs. Frank E. Swan, Wauwatosa, June 24th, 1913."

Meeting called to order at 1.30 o'clock p. m. President R. W. Rowlands presided.

The minutes of the previous meeting were read and approved. The matter relative to appointing two committees, namely, the auditing committee and the nominating committee was taken up, and upon motion by Mr. Earl Roberts, seconded by Mr. J. R. Love, it was moved to leave the appointments to the president, which he deferred until later in the meeting.

The following names were then proposed as new members: Mr. Gavin McKerrow, Pewaukee, and Mr. Charles D. Love, Waukesha.

As honorary members the following names also were proposed: Professor D. H. Otis, Madison; Mr. A. J. Glover, Fort Atkinson, and Mr. Swan, Sr., of Wauwatosa.

A motion was made and carried to accept said names as members, subject to the ruling of the board of directors.

The following program was then carried out:

Mr. John Michels, of the Milwaukee County School of Agriculture gave an address on the subject of "Better Cows," which proved very helpful.

Mr. A. J. Glover, of Fort Atkinson, addressed the meeting on the subject of the "Dairy Cow."

Professor D. H. Otis gave an address on "Farm Management," using a well prepared chart to illustrate his views.

Mr. Julian Ries, secretary of the Waukesha County Jersey Breeders' Association, was called upon for a few remarks.

Following this the president announced the following committees whose duty it is to report at the next meeting.

Auditing committee to consist of Mr. Peacock, Oconomowoc, Chairman; Mr. R. P. Breese, Waukesha, and Mr. D. M. Laney, Dousman.

Nominating committee to consist of Mr. Gavin McKerrow, Pewaukee, chairman; Mr. D. W. Jones, Nashota, and Mr. Geo. D. Lawson, Oconomowoc.

A motion was made extending Mr. and Mrs. Swan a vote of thanks for their kind hospitality.

Meeting adjourned 5.30 P. M.

F. E. Fox, Secretary."

President: Gentlemen, you have heard the minutes of the previous meeting, what is your pleasure concerning them.

Mr. J. R. Love: I move they be accepted as read.

Mr. Fruit: I second the motion.

Motion put and carried.

President: We will next hear the report of the treasurer. The treasurer has been very thoughtful in having his report printed and put on most of the chairs here, and I should think that in view of the fact that they are so plainly put there, that it would not be necessary for the treasurer to go through the formality of reading the report. Of course if the treasurer desires to read it, we will be glad to hear him.

Treasurer William M. Jones: No, I think the report is all there.

TREASURER'S REPORT.

Receipts.

Balance on hand as reported at last annual meeting, Jan. 29, 1913	$ 932.90	
Received from C. L. Hill for cut	3.00	
Received from 87 memberships at $3.00	261.00	
Received from 5 memberships for 1914 at $3.00	15.00

May 31	J. E. Mack, auctioneer	50.00
	Total amount of sale epxense	1,714.78

Amounts paid to the several consignors to annual sale, May 22, 1913:

R. W. Rowlands	$ 1,368.92
Denton Farms	479.69
David W. Jones	269.82
W. Nicholls	1,244.10
J. O. Harrison	269.80
J. H. Williams	644.64
Fox Bros.	6,407.04
Gustave Timmel	174.82
Fruit Bros.	1,799.28
H. W. Griswold	324.64
H. N. Longley	339.64
William M. Jones	3.552,91
George D. Lawson	319.64
Charles L. Hill	679.82
J. T. Maule & Son	314.64

Earl Roberts	494.82	
C. J. Kuetz & Son	79.82	
Edward Gerretts	429.64	
J. R. Love & Son	809.46	
Thomas Cudahy	189.64	
Total amount paid consignors		$20,192.78
Cash balance on hand		684.45
		$23,787.93

$151.65 of the above cash balance shown, belongs to the individual subscribers for advertising purposes, leaving a balance to the credit of the Waukesha County Guernsey Breeders' Association on January 21, 1914, of $532.80.

F. E. Fox, Secretary.
William M. Jones, Treasurer.
January 21, 1914.

Secretary Fox: If there are no questions from the members I would suggest that the report of the auditing committee be adopted. That would take care of the treasurer's report.

President: Yes, I call the attention of the members to the fact that this report has been audited by a committee consisting of Mr. D. M. Laney, R. L. Benjamin, and R. P. Breese.

Secretary Fox: A word about Mr. Peacock. He was chairman of the committee, but owing to some important business he could not serve, and Mr. Benjamin was called in his place.

President: That explains the change of the name there.

Mr. Peacock is here, and if he cares to read the report of the auditing committee at the present time, we will hear that.

The report of the auditing committee was read by Mr. Peacock as follows:

"January 21, 1914.

To the Waukesha County Guernsey Association:—

Gentlemen:—We, the undersigned members of the committee appointed by your president to examine and audit the accounts of the secretary, F. E. Fox, and treasurer, William M. Jones, do hereby certify that we have gone over all the receipts and disbursements of said secretary and treasurer, and that we find them correct.

We further find that there is now to the credit of the Waukesha Guernsey Association $684.45.

We further find that $151.65 of the above cash balance shown belongs to the individual subscribers for advertising purposes.

Respectfully yours,
D. M. Laney,
F. L. Benjamin,
R. P. Breese."

President: We have in our treasury outside of this advertising fund $532.80. You have heard the report of the auditing committee, and we will pass upon the report of the auditing committee, and the report of the treasurer at the same time.

Secretary Fox: You omitted the report of the secretary. Would you want to act on the auditing committee report or would you care to act on the secretary's report also.

President: The Chair will entertain a motion in regard to the treasurer's report.

Mr. Edgerton, Oconomowoc: I move the adoption of the treasurer's report, and that of the auditing committee.

Mr. J. R. Love. I second the motion.

Motion carried unanimously.

President: We will now hear the report of the secrtary.

The report of the secretary was read by Secretary Fox as follows:

"Secretary's Report, January 22, 1914.

Total number of members at the end of the year 1912, 77. Members joining at last winter meeting, 17. Members joining at last summer meeting, 2. Total at meetings, 19. Members joining at other times, 2. Making total number members joining during year, 21.

Members unpaid for 1913 and therefor suspended by rules are as follows:

One member suspended by Board of Dirctors; moved away, 2; those asking to resign, 4; Those unpaid and giving no excuse, 4. Total, 11. Total number members in addition to last year that are considered in good standing by the rules, ten. Total number of members in good standing Jan. 22, 1914, 87. Honorary members on the list at the beginning of 1913, 6. Honorary members added during year, 3. Total, 9. The death of one honorary member leaves the total 8. 87 members paid for 1913 at $3 each makes the total $261. Five members have paid for 1914 which equals $15. Total amount received from membership $276.

You will find in the report of the treasurer a balance of $532.80, which is greater than any balance ever reported by this Association. You will also find by examination that the numbers of members that now belong to the Association is greater than any number that has been reported at any previous annual meeting.

The members that are carried by this Association are members in good standing which pay their dues annually and any member that does not pay his dues is suspended by the by-laws of the Association.

The policy of the Association is not to secure members for the purpose of increasing the number only but to secure members that will take an active part and pay their dues annually and therefore be considered in good standing.

In summing up the situation your Secretary and Treasurer are in a position at this time to report the membership roll and the finances of the Association stronger and in a better condition than at any previous time.

F. E. Fox, Secretary."

President: You have heard the report of the Secretary, Gentlemen, and I am sure you feel about as I do, quite gratified. It certainly is a pleasure to see the way the members pay their dues. We are glad to have them paid up as close as they are. It is not quite a clean sheet, but I think we are coming to the time when every member who has joined, unless they have moved away, or for similar reason. We want everyone paid up at the annual meeting. That means that the men have sufficient interest and are alive enough to the interests of the Association to know that they are getting their membership fee a hundredfold.

What is your pleasure concerning the secretary's report?

Mr. Peacock: I move that we accept and adopt the report of the secretary as read.

Mr. William M. Jones: I second the motion.

Motion put and carried unanimously.

President: At the present time we will give an opportunity for taking names of new members. This will not be the only opportunity. We will give other opportunities during the day. If anybody has the names of some members who would like to join, we would like to have them presented at this time. You understand the rules of the Association are that the members who are proposed are referred to the board of directors for action, and because of the change in our by-laws at the last meeting it will be impossible to act definitely upon them to-day, the proposals for new members must be referred to the board of directors and will be acted upon immediately after this annual meeting. There are three new members to be elected to-day, and it will not be fair to them for the board of directors as it stands now to act upon the members for the coming year. Does anybody have any names to present now.

We have one name, Mr. O. Hinckley, of North Prairie, Wisconsin.

Mr. Earl Roberts: Wisconsin: I wish to present the names of Mr. W. J. Kummrow, and Mr. F. E. Kummrow.

Secretary Fox: Where do they get their mail?

Mr. Roberts: Oconomowoc, route 28.

President: Any more names at this time?

Mr. R. R. Jones: Robert Overvaugh, Hartland, Wis.

President: I will present the name of George Brewer, of Hales Corners.

Mr. Gavin McKerrow: I would present the names of Mr. L. B. Stevens, of Hartland, and Mr. Charles Scholtz, of Pewaukee, and Charles Bartlett, of Pewaukee, and Mr. Tempero is here to-day, and I want to present the name of Mrs. Charles J. Tempero, of Templeton.

Secretary Fox: We must thank Mr. McKerrow for doing some missionary work up in that direction.

President: Are there any more names at this time?

Mr. H. R. Lobdell: I propose Fred Smith, of Mukwonago, route 4.

Mr. R. R. Jones: Joseph Hasslinger, Hartland.

Mr. McKerrow: I would like to add Fred Beaumont to this Association, if he does not belong, I am sure he wants to join.

Mr. T. R. Stewart: T. R. Stewart, Wales.

Mr. J. A. Peacock: I propose the name of John Balen.

Mr. Edgerton: Llewelyn Morgan, Oconomowoc.

Mr. William M. Jones: Griffith R. Jones, of Wales.

President: If these are all the names you have now, if you see any of your friends to-day or think of them later in the day, we will give you another opportunity to have the names presented. We now have sixteen names, and according to the by-laws these names will be referred to the board of directors.

I think there is a committee on resolutions that could be appointed any time, and I think I will appoint them now. The resolutions may be presented immediately in the afternoon. I will appoint Mr. William M. Jones, chairman of that committee, Mr. Earl Roberts, and Mr. Gavin McKerow as the other two members.

The next order of business is the report of the nominating committee.

The report of the nominating committee was presented by Mr. George D. Lawson, as follows:

We, of the nominating committee, have recommended the following members of the Waukesha County Guernsey Association for nomination for three years: Mr. John H. Wlliams, Waukesha, Mr. Earl Roberts, Oconomowoc, and Mr. Gavin W. McKerrow, of Pewaukee.

Signed D. W. Jones
George D. Lawson
Gavin McKerrow.

Mr. Gavin McKerrow: I would like to make just a remark or two. I said I wanted to see some one from our part of the county on that nominating committee, and we looked around, and they kind of spotted on me. I did not want them to do that. If you could find anyone else here from our part of the county, I wish you would put them on please.

President: We are perfectly satisfied. We are not anxious to make any change. There are many good men there, but we are satisfied with the report as it is.

Mr. William M. Jones: I think the committee acted wisely in putting Mr. McKerrow on as one of the board of directors.

Secretary Fox: To shorten matters, I move that the report be accepted and adopted.

Mr. J. R Love: I second the motion.

Motion put and carried unanimously.

President: For the benefit of whatever strangers there may be, we have nine members on the board of directors, and three of these are elected each year. Therefore, the men elected to-day hold office for three years; then the regular officers of the Association, the president, secretary and treasurer, are elected by the board of directors out of their own number.

Are there any other committees to report at this time?

Secretary Fox: I do not know of any others.

President: We have no record of any. Is there any unfinished business.

Secretary Fox: I do not think we have any unfinished business.

President: The secretary has a communication to read.

Fort Atkinson, Wisconsin. January 14, 1914.

Mr. F. E. Fox, Sec.,
Waukesha Co. Guernsey Breeders' Assn.,
Waukesha, Wis.

Dear Sir:

The Wisconsin Dairymen's Association will hold a one day's meeting at Madison Tuesday, February 3, 1914. We desire very much to have this a representative meeting of dairy farmers and breeders, and we would like to have you send at least one or two delegates to this convention, as we believe a meeting of this kind would prove advantageous, not only to the men who attend but to their communities. A gathering of representative men from all parts of the State will produce an understanding and comprehension of dairy farming and breeding that cannot be obtained in any other way.

Following this convention will be meetings of the State Agricultural Society and of the several breed associations.

The following program for February 3, has been provided.

"Community Breeding"—F. H. Scribner, Rosendale, Wis.

"Cow Testing Associations"—Theodore Sexauer, Menomonie, Wis.

"Dairy Scenes in Guernsey"—Chas. L. Hill, Rosendale, Wis.

"A Permanent Agriculture & Dairying"—Dr. Alfred Vivian, Columbus, Ohio.

Yours very truly,
Wisconsin Dairyman's Association.
A. J. Glover, Secretary."

Secretary Fox: From that it seems he wants this Association to elect one or two delegates.

President: The date is Tuesday, February 3. No doubt quite a number of the members of the Association will be there, because I think that is about the time of the Farmers' Course. But at the same time, since we have got to that plan of the Wisconsin Dairymen's Association, we would be pleased, I should think, to have delegates there. What do the members of the Association think about it? Mr. Jones, what do you think about it?

Mr. William M. Jones: I think there would be quite a number of us there at that time.

Secretary Fox: You think it is not necessary to appoint two delegates for that purpose.

Mr. William M. Jones: Yes, I think it is.

Secretary Fox: And pay their expenses?

Mr. William M. Jones: Yes, pay their expenses.

Secretary Fox: If we appoint them, we should do that.

Treasurer William M. Jones: I suppose so. I make the motion that we appoint two delegates and pay their expenses.

Mr. Edgerton: I second the motion.

President: It is moved and seconded that the Association appoint two members to serve as delegates at this convention of the Wisconsin Dairymen's Association. All in favor will signify it by saying "Aye"—contrary "No."

Motion carried unanimously.

President: We are now open to nominations as to who those members shall be.

Mr. Edgerton: I have the pleasure of nominating Mr. William M. Jones, of Waukesha.

Mr. Fox: Not but what I would not just as soon see Mr. Jones go, but I think he will go anyway; let us put on two other parties who are not liable to go.

Mr. Edgerton: The assurance that he will go is worth something.

Secretary Fox: I will suggest the name of Mr. D. M. Laney, of Dousman.

Mr. William M. Jones: I second that nomination.

Mr. D. M. Laney, Dousman: I nominate Mr. Harvey M. Longley.

Mr. J. A. Peacock: I am heartily in favor of Mr. Longley, but I think it ought to be distributed.

Mr. William M. Jones: I think we ought to have a gentleman from Oconomowoc, and I think Mr. Peacock will be a good man.

Mr. H. R. Love: I second the nomination of Mr. Peacock.

President: The motion is made that we send Mr. Peacock and Mr. Laney to that convention. All in favor will signify it by saying "aye."

Carried unanimously.

Mr. Peacock: I think I owe Mr. Longley an apology for this proposition.

President: And Mr. Edgerton thinks he is pleased that he will get Mr. Peacock out of Oconomowoc for a few days that way anyway.

I have a letter from Mr. Swoboda, ex-president of the Waukesha Holstein Breeders' Association, and it seems that at their meeting they decided to organize a cow testing association, and he would like to have the matter presented here to-day to see if there are a number of Guernsey breeders who would like to enter this cow testing association in conjunction with the Holstein Breeders' Association. They probably would have enough men, I really don't know, but he wanted to know if there would be any Guernsey breeders in the county who would like to enter this plan of having their cows tested. I think you probably understand that. We had a cow-testing assocation in the county about three or four years ago. The plan is to hire a man, and I think each individual who wishes to have his cows tested once a month by this man pays a dollar a cow. I think there is another plan also that they have, but I think one of the most popular is where each one of the subscribers pays one dollar per cow that he wants tested. This man comes to the farm once every month and takes a sample of the milk and weighs it for a day, and also takes an account of the feed, and then at the end of each month, and at the end of the year, as I understand it, he fills in on a book, which is presented to you in the proper form, just how much butter each cow has produced, and how much your herd has produced, and how much they have consumed in feed, in both roughage and concentrates. For that you pay a dollar a cow.

Mr. Edgerton: Per month?

President: No, for a year.

Mr. Edgerton: A dollar a cow for a year. All right, I will get you a herd on that right away.

President: On that plan?

Mr. Edgerton: Yes.

President: The plan has its merits all right. They have quite a number of them all over the state. Are there any here to-day who would like to enter their herds. I know it is kind of sudden, and you might want time to think about it.

Secretary Fox: I move that the Association as a body adopt the plan, and then if there is anyone who would like to join, why I believe it is a very good thing for the county or anyone who wishes to join, and I believe it would be a splendid thing for the Association to adopt the plan as a body. I move that we do adopt it.

Mr. William M. Jones: I second Mr. Fox's motion.

Mr. Edgerton: I was going to ask you, Mr. Chairman, if in doing that we are adopting a set proposition from Mr. Swoboda. If it was, I was going to ask if I might have the proposition read again.

President: No, I don't think so. All he says here is: "Just a line in regard to the organization of a cow testing association in Waukesha county. I was glad to see the Holstein men take hold so well yesterday. I am wondering if you Guernsey men would not like to have the matter presented at your meeting next week. I am sure you would get as many cows as the Holtein men signed for yesterday. With that start Mr. Searles, the state organizer, could come in for a few days, and no doubt you and some of your members would be glad to go out with him. I am sure some of the officers of the Holstein Association would be glad to do the same. If agreeable to you let me know at once, and I will prepare an article on the subject for the Freeman, to be run next week—"

I did not get the letter in time for that. He is just presenting the proposition.

Dr. Love: The secretary of the Holstein Association is here, and you might call on him and see what has been done.

President: Mr. Charles Will I think is secretary of the Holstein Association. I do not know as I remember just what was passed at the meeting of the Holstein Association, and I would like to have Mr. Will tell us.

Mr. Will: Mr. Searles and the state organizer of this work will be in the county before the close of this week. I expect him to be in our neighborhood on Saturday afternoon. He will have to return of course, this week. But he is ready to help you at any time.

President: Which neighborhood do you mean?

Mr. Will: At Sussex. It seems to me the only practical way of running this thing is to cut the county up into small districts. Of course, if you cannot get enough in a small district, you will go out until you do get enough; but we almost hope we can get enough cows in the town of Lisbon for an association of our own, and I think we ought to have several associations in the county. I fully expect to see more than that. I do not see any reason why there should not be.

President: You are in hopes of getting sufficient cows in the town of Lisbon for one association, and employ one man, is that it?

Mr. Will: We are going to try to get it.

President: Will that take a large percentage of the Holstein breeders?

Mr. Will: No, there are only a few names as I recall it, that we got in at that meeting.

President: How many cows did you have signed up for.

Mr. Will: About 200.

President: Most of those were outside of the town of Lisbon.

Mr. Will: Yes sir.

President: Were there many in the vicinity of Waukesha?

Mr. Will: I think a little over a hundred gave the address at Waukesha. I could not give the names, now, I am not familiar with them. There were four or five quite large herds, and the post office address was Waukesha.

President: It takes about 400 cows to run that properly.

Mr. Will: I think so. It depends on just how the men take hold of it. If you have 400 cows and you cannot get a man for less than $600, it will cost a dollar and a half, and if you have only 300, and if the men have enough ambition to force it through, all have to pay $2 until you get your cows tested.

President: Why is it they ask for 600 cows? That would mean a salary of $600.

Mr. Will: It does not look to me as though a man could hardly handle 600 cows unless he gets them in herds of 25 or thirty each. It looks to me like a big day's work for a man to test 25 or 30 cows twice a day.

President: And there are times when he would only get 15.

Mr. Will: There may be cases where we can run two herds together, 7 or 8 cows; possibly we can do that. The herds in our neighborhood are smaller than they are around Waukesha.

President: The idea is, all this money subscribed, a dollar per cow, goes to the man as wages.

Mr. Will: Goes to the testers as wages.

President: We certainly can't get a man to do it for less than $600.

Mr. Will: In some localities I think Mr. Searles, if I remember rightly, said that their man furnished is own rig. That would not be necessary. I do not think it would be desirable in our community. Most of us have our stables and would rather cart him over the neighborhood; each farmer transports him to the next place.

President: He could so arrange his route to make the least travel for each man.

Mr. Will: Short trips.

President: We thank Mr. Will for giving us that information.

Mr. J. R. Love: One question I would like to ask in regard to the cow testing, will this be official in any way?

President: Personally I would not regard it as such. The action of the Association, as I would look at it would be merely endorsing the movement.

Mr. J. R. Love: I do not think you quite get my meaning. Would it be official, would you have an official record of the animal?

President: On the animal you would not. I know at the time we had the Association it was suggested that those records be accepted as official, providing the man had been sanctioned by the American Guernsey Cattle Club, but I am positive that there is no way at the present time, unless it is provided immediately, for those records being made official.

Mr. Edgerton: Mr. Chairman, of what value would that record be to the members of this Association, or anybody consigning, to the sales of this Association.

President: It would have this weight with the buyer, Mr. Edgerton, that it would show conclusively the ability of the cow.

Mr. Edgerton: Then could not this be made more desirable if this Association agreed that they would endorse that inspector, or that tester, and that his figures might be regarded as official so far as this Association was concerned.

President: Yes, that would give much more weight if the Association would not get into a tangle.

Secretary: Instead of speaking of this Associaton, we could refer to the American Guernsey Cattle Club.

President: Mr. Edgerton means just as a matter of information to buyers at the sale that the Association would say to the public, now we believe these records are absolutely correct.

Mr. Edgerton: Yes, that is the idea.

Mr. J. R. Love: Would it not have a great deal more weight if our records were made under the auspices of some of the official associations.

President: It certainly would, but it would cost more money, Mr. Love.

Secretary Fox: You are speaking in the pure bred line, where as this Association as a rule works among grades—grades or pure breds--mostly grades.

President: It would be a splendid thing if this could be regarded officially. Then we will have a number of pure breds in too.

Dr. Love: Isn't this movement primarily for the purpose of weeding out the poor cows.

President: Precisely.

Dr. Love: I think it ought to be not only endorsed, but ought to be pushed through. I am very anxious to see it go through.

President: I am sure that the majority of the members, or nearly all of them feel in that way, Doctor. The question under discussion now, as I understand it, is if there would be any way of declaring these records official, and then breeders of pure bred cattle could have this same man test their cows and have the records accepted by the American Guernsey Cattle Club. That is the idea, is it not?

Dr. Love: Yes.

President: Of course that would be a matter we might take up with the American Guernsey Club, and see if they would sanction this man. I presume it would depend largely on the University that would send the man to us. We will act on the first motion at the present time, and the matter of taking this matter up with the American Guernsey Cattle Club, if there is no objection the Chair will refer that to the board of directors.

Secretary Fox: Why not get the sense of the meeting. Why not have the parties raise their hands that would feel as though they would like to have their herds tested in that way?

President: You mean purely like they are testing now all over the state, without regard to making them official records?

Secretary: Yes.

President: All who would enter some cows in that cow testing association will please raise their hands.

Mr. Kingston: Please explain the question to me.

President: The Holstein Breeders' Association have decided to promote a cow testing association, and we were invited to join them in an effort to organize a cow testing association throughout the county for as many as we can supply cows for. I understand the cost will be a dollar per cow, and for that the man will come to each farm, and will take a sample of your milk and test it and weigh it one day of each month in the year, and also take the amount of feed you are feeding, and at the end of the year he will give you a report in blank form and in book form also, in which you will be able to see just what it has cost you to feed every cow in your herd, and what each cow has produced, also what your herd has produced and what your herd has consumed and the net profit.

Mr. Kingston: One dollar a month and one day per month?

President: One dollar a cow per year.

Mr. Edgerton: Just hires a good book-keeper for a small sum.

President: Just hires a good book-keeper for your herd, that is all; it is an economical way of doing it. Everybody hold up your hand who are in favor of doing this. We have six names now. I am sure that if Mr. Searles comes in here, and we announced it in some way as many as possible will come to that meeting and let Mr. Searles present the proposition.

It has been moved and seconded that the Waukesha County Guernsey Breeders' Association endorse and promote the cow testing association as much as possible. All in favor will signify it by saying "aye."

Motion put and carried unanimously.

President: I guess probably you are all familiar with our advertising plan, which is the next subject we want to discuss, the advertising for the ensuing year. You understand

that last year—I do not remember just what the amount subscribed was— but we made kind of a plan whereby if a man donated $100 toward the advertising fund, that his name would appear each week of the year in whatever papers we were advertising in. For instance, Hoard's Dairyman I think we had a four inch double column space there, and we had some kind of a diagram indicating the amount of business the Waukesha County Guernsey Breeders' Association were doing, whatever advertising matter we could properly put in there, and on one side of it we had a list of the names of the breeders in the county, and if a man donated $100 his name appeared in that ad every week of the year; if he donated $50, it appeared each alternate week; and if he donated $25, it appeared once a month. I think we had advertising in the Wisconsin Agriculturist, Hoard's Dairyman, Kimball's Dairy Farmer, and was there another, Mr. Jones? Didn't we have it in the Wisconsin Farmer?

Mr. William M. Jones: I think the Wisconsin Farmer.

President: And the Homestead. And the Association as an association paid for the ad in the Guernsey Journal.

We would like to have the plan discussed at the present time. Our advertising contracts I think have about all run out now, and we would like to have the matter discussed and see what the sense of the meeting is. How do you feel about it? Do you want this plan continued, or do you have a better one to suggest, or do you wish it modified in any way? Do you think it ought to be enlarged, or cut down. Any ideas you have on the subject will have to be presented now, and we have not a great deal of time for discussion. If we do not get opinions quickly I will have to call on some of you.

Mr. William M. Jones: I think our last year's plan was a very good plan.

President: Have you any idea, Mr. Jones, whereby it could be improved?

Mr. William M. Jones: I do not know as it could be improved very much. I cannot see that it can. I think it is a cheap plan, and it is a very good plan.

President: Is it clear to everyone here, do you all understand it. If you want any point made clear we will explain any point you wish. Albert Fox, what do you think of the plan?

Mr. Albert Fox: I think the plan we had last year was a very good one, although I think it could be improved in some particulars.

President: How, Mr. Fox?

Mr. Albert Fox: There are some papers if the board of directors wants to, that probably can be dropped out and others taken on.

President: You mean in the places where to spend the money.

Mr. Albert Fox: Yes. Other than that the plan was very good, I think.

President: If any more of you have such ideas as Mr. Fox's we would like to hear from you. Mr. Fox is a member of the board of directors, and he can present his ideas as to what papers to advertise in at the meeting. If any of you who are not members of the board of directors have any ideas as to how the money could be spent to better advantage, or have an idea that another paper would be better to spend the money in, just say so. Mr. Laney, what do you think about it?

Mr. D. M. Laney: It seems to me the idea is a very good one for the older breeders, those that have pure bred stock to get rid of, but in a case like my own, we have not really got started far enough where we can afford to pay $100 for that advertisement. I think it is better for a man in such circumstances to advertise individually for their stock. They probably have one or two that they sell at a time, while the older breeders have a larger number of cattle to sell. I think it pays them to advertise the way you have been advertising.

President: I see. Now that opens up a new field.

Mr. Roberts: The object of the advertising that has been done this year is to provide for just such cases as this, to divide it not only into units, but half units and quarter units, so a person having only a little could still take advantage of it; he could probably get enough material to advertise his cattle if he had more he could take a half unit; if he had more, like the larger breeders, he could take a whole unit. It seems to me the plan adopted last year has taken into consideration just such cases as that. A person may subscribe $25, $50, or $100.

President: When those people have animals for sale, if they would report those to the secretary, the Association does all they can to sell those animals, and I know that many of those men feel as if they would rather have those animals sold than sell their own lots of times. We should not get into the idea that the plan is intended for the larger breeders, because the larger breeders probably could spend their money and get a card all to themselves, but they are putting their names down with these people who do not want to spend so much money as that, in order to make it an aim for the Association and bring buyers. It is a fact, that if several of us would advertise separately in different papers that would not bring anywhere near the buyers into this county. It is a fact that they can see ten or a dozen members at a glance, and all of these men within driving distance of each other. If there are individual members who have animals for sale, report them to the secretary, and report them often enough so they will be on file, and the time will come, it may not come right away, but it will come. I know a man here a short time ago that had five or six bulls, and he was really getting anxious to clean them out, and afraid he could not sell them, and all that. I had been telling him continually that his only trouble would be he would be wishing he had more before spring, and I guess he sold three the other day, or two days apart, and he has sold three, and I guess he begins to wish he had more. That is a good point that was brought out by Mr. Longley. Mr. Love, what do you think about it?

Mr. J. R. Love: I have not very much to say, but I do not believe I am quite as much in favor of our last year's plan as I was in the advance of the old sale list. I am only speaking of my own experience. During the past year I appeared among the number that was advertising. I had but very little correspondence, and from that correspondence I sold nothing; but from the old sale list I sold a great deal. When you have the sale list and your animals are listed, just what you have got to sell, and the buyer or customer writes for what they want; they can see exactly on the sale list what is for sale.

President: You would not be in favor of having the sale list take the place of that ad, would you—or would you be in favor of running the sale list in addition to it?

Mr. J. R. Love: No, I think it costs enough as it is.

President: You think you would cut down.

Mr. J. R. Love: I would.

President: What is the expense of running the sale list for a year?

Secretary Fox: I do not recollect; it is some time ago since we did it. How are the people going to know you have got a sale list?

Mr. J. R. Love: You would not need to advertise nearly as much in the paper as you do.

Secretary Fox: The sale list is a fine thing providing you can keep an up-to-date sale list every 24 hours; but the sale list becomes old before we can get it out of the printers hands

Mr. J. R. Love: When a man puts his money in and gets nothing for it—

Secretary Fox: He should not do that.

Mr. J. R. Love: You are going to look for something else.

Mr. Fruit: I am in favor of the plan we have already had. A good many buyers did not seem to have any idea there was any other Guernseys in the state than those around in the Waukesha Association.

President: You have seen some buyers come down with Hoard's Dairyman in their pocket, and open it right to that ad.

Mr. Fruit: Yes.

President: I have seen buyers come around, and they would have Hoard's Dairyman in their pocket, and have the list on that ad, and making the rounds of the county to see that they got those names. We can have some more ideas on the sale list too. I do not know just what the cost of the sale list is. Give us approximately the cost of it once a month for a year.

Secretary Fox: We got it out quarterly, I think.

President: A quarterly sales list gets old pretty quickly.

Dr. Love: Is not that ad that is being run being looked upon more as that of private individuals than as that of the work of the Waukesha County Guernsey Association. If that ad is being run by individual breeders, why it should not be; it should be run by the Waukesha Guernsey Association.

President: It should not be run, you say?

Dr. Love: No. In other words, if that ad gives the idea that there are only ten or twelve Guernsey breeders in the county; you say they come in and pull out their Hoard's Dairyman, and you may see the name of Rowlands and Jones and Fox and Chapman, and the other names appearing in the list, and nobody else is seen.

President: Well now, there is a little point there.

Dr. Love: I did not name those names in a personal way.

President: You could go down and see Williams and Fruit and all of them.

Dr. Love: Those names happened to come to my mind; that is not personal. I am just saying that list.

Secretary Fox: Dr. Love, if there are other parties belonging to the Association that would like to have these buyers visit their places, the only thing for them to do is to get out their pocket book and pay the $25, and the buyers will come there with Hoard's Dairyman the same way.

Dr. Love: Some of us have only got two or three Guernseys, and none to sell, but we may have other things.

President: What other things do you mean? You say they might not have any pure breds to sell, but other things; do you mean grades?

Dr. Love: In other words, I cannot afford to pay $25, when I have nothing to sell.

President: You would not care to have them come and bother you unless you had something to sell.

Dr. Love: I would like to have them come and look my stock over—I am not ashamed of them this year.

President: I do not think you need to be.

Mr. William M. Jones: I think we are carrying another ad in journals; I do not know how many papers we are carrying it in; in the Breeders' Journal, Association ad.

Secretary: That is the only one.

President: We are carrying an ad in the Guernsey Breeders' Association; that is paid for out of the funds of the Association. I think our ads in the others cost us something like $1400, if we did not have the private donations from these men to carry on that ad, we could not carry it on, and the men who donate $25 to $100 to carry that on, ought to receive some material benefit. If they were to donate and say Waukesha County Breeders' Association only, then the man who donates $3 would get just the same as the man who donated one hundred, and I am afraid our $100 would run pretty low, Dr. Love.

Dr. Love: Is this ad you are running, the Waukesha Guernsey Breeders' Association, or is it a group of Waukesha County Guernsey Breeders?

President: Then the idea would be to drop the name Waukesha County Guernsey Breeders' Association, and insert Waukesha Co. breeders, and run it separate from the Association.

Dr. Love: It is pretty hard to keep the two apart.

President: You would keep the two apart? How many are in favor of keeping the two apart, not using the name of Waukesha Guernsey Breeders' Association in connection with this ad. We advertise, I think, Waukesha Co. Guernsey Breeders' Association, and so on, and give the names in this list. Now if we are in favor of saying Waukesha County breeders, and then let these men run the matter independent of the Association, or spend this money to advertise the Association at the head of that ad.

Mr. William M. Jones: I think the doctor is a little mistaken in that ad. I think he is misled a little bit—I do not know as he is mislead, but I do not think he looks at it in the right light at the present time. We are also advertising our own stock, and advertising the Association at the same time.

Dr. Love: I understand that part of it, but as Mr. Rowlands said, when they come into the county the first thing they do is to pull out Hoard's Dairyman, and must just see these people whose names appear in the ad. Isn't that right, you said that just a moment ago?

President: Yes, I did, but these men paid for the ad, that is my argument. You believe these men should come in here and go and see every member of the Association?

Dr. Love: Oh no, no, because he would be travelling all week.

President: We would like to get some more views.

Dr. Love: Well, here is the idea, is it not clear? We are running this ad, and some have paid considerable for that ad, and others have not paid so much; but it is my experience we are looking to these buyers that come, they go to these head men, and these men are helping the others to sell their stock, if they have none themselves to sell, they are going to come to those that paid in $25 or $50, and if they have none to sell, they are going out to those that have not paid a cent for that ad.

President: Yes, I presume so.

Dr. Love: It is my idea we ought to be advertising as a Guernsey Breeders' Association.

President: The way we are doing now?

Dr. Love: No, let everybody help.

President: Let everybody help and pay them out of the funds in the Association treasury.

Dr. Love: I would, and let it go as far as it would.

President: Mr. Love: we have 260 odd dollars that come from members, about 260 from our sale, and I think we could spend about $250 a year. Could we spend that much as an Association?

Mr. William M. Jones, Treasurer: Yes, I think we could.

President: We could spend about $250 a year as an Association, advertising Waukesha County, and at the present time we are spending $1400.

Dr. Love: But the good share of that is paid by about 15 members, is it not?

President: Yes, I think all is paid by about 15 members.

Dr. Love: Pretty near a hundred members getting the benefit.

President: They are all getting a chance to pay for it.

Dr. Love: They are not paying for it.

President: I was not on that committee, but I think they are getting just as many $25 as they can from the Association.

Dr. Love: You mean they had a chance?

President: Mr. Fox took his automobile and called on every member of the Association where there was a chance of getting $25, because just as much as they can possibly get they are spending in these papers and making the ad larger. If there are a number of members here, or the majority of us, think that these men who are willing to spend that money should spend it separately from the Association, and then the Association itself carry an individual ad of its own, that is the policy we want to pursue. Let us get the idea of some of these advertisers that we have.

Mr. Kingston: Why not assess these members according to what stock they own, and have an equal taxation on it, and let them all help you pay, so much from the man with 50 cows, and so much from the man who has only 5.

President: So much an animal?

Dr. Love: I wonder if Mr. Kingston has ever seen the assessment list of our town?

Mr. Kingston: If he has not seen the assessment list of our town, he has of his own.

Dr. Love: When the assessor comes around, a man only has about 20 or 25 head, and the most of them are not a year old; before the year is out some of our breeders have as high as 125.

Mr. Laney: That would not work, because there would not anybody have animals for sale until the buyers come.

President: You would not have any for sale when the necessity arose, and everything to sell when the buyer comes around.

Mr. Kingston: I think the members of this Association would be honest enough to tell them how many pure breds they own, and you could average them up.

President: The trouble is, Mr. Kingston, many buyers come around and see you haven't any to sell, and the man comes around anxious to sell, and is offered a big price, the man would sell; you think he should kind of tax that sale in some way, is that your idea?

Mr. Kingston: No, what cattle they own, it would not make any difference whether they were for sale or not. You could have them averaged up to a certain figure, that would give the whole society a chance to pay in, and I do not think it would be very heavy on any one man.

Mr. Peacock: I would like to ask the gentleman over there what he would do with the man that had 25 cows and absolutely refused to sell any for two years, how his assessment would strike him. There are breeders that are just starting out, and they have no thought of having anything for sale for some little time. Under that plan, as I take it, every owner of stock would be assessed so much a head whether he wanted to advertise or not. It seems to me the plan has been already adopted is the broadest plan and reaches the most people of any plan that can be adopted. We took an ad, and knew at the time we took the ad we had none for sale; we took a $25 ad; we were little fellows, and are little fellows yet; and we got quite a good many letters, a goodly number of letters from different parts of the country, not only in Wisconsin, but far-reaching inquiry of us what we had for sale; we did not have anything, but we believe we were contributing and helping to advertise Waukesha County as a breeders' center.

President: I think we are not anywhere near through discussing that advertising idea, but we have other business, and we will meet here just as quickly as we get through with the dinner, and carry on this discussion further. I want to call on one more person who was just about to get up, Mr. Gavin McKerrow.

Mr. Gavin McKerrow: We have had little experience; we have been one of the little fellows, and just had a $25 ad, but we have not got a great deal of actual results in inquiries from it; I know we have got just two; but it seems to me we are mighty glad to help advertise Waukesha County, because we have been out, we have seen lots of results from this wonderfully efficient advertising that your officers have done; but as Mr. Love suggested, I have talked to a few breeders around our way, these little fellows, and some of the bigger ones possibly, and they seemed to want a sales list. Now I would kind of like to suggest that a little of the money be taken for a sales list, but I know it is more work for the secretary, and he is doing more work now than he ought to do; but I believe a little of that money in a sales list would probably do more good.

President: You mean a little of this private subscription?

Mr. McKerrow: Yes—well, collect that money for the sales list from the individuals, but give them a chance to have a sales list.

President: You mean the sales list would bear its own expenses.

Mr. McKerrow: Yes, try and make it, as much as it could.

President: Suppose the Association pay half of it.

Mr. McKerrow: Yes, something like that.

President: And let the individuals who advertise pay the other half.

Mr. McKerrow: Yes, and at the same time let these men pay out this money and put their ad under the head of Waukesha County Breeders' Association, because I think that does the Association good, and does all the members good.

President: I think we will continue this discussion now while we have the matter in mind, and immediately after dinner discuss the possibility of the next Guernsey sale.

If there are any more ideas let us get them quickly, because we have only about ten minutes to spend on it. After our members have expressed their views I want the ideas of some of our advertising men, and see what they think of such a plan, that is, the idea of separating this ad and having it carried on by the individual members of the Association, that is, on about $1400, spent on advertising by from 12 to 15 members of the same, and provide for the sale list, and about $200 spent advertising the Association.

Mr. Edgerton: It seems to me on this question of division, Mr. Chairman, that it would practically result in splitting of the efficiency of the organization. If those who have advertised heretofore in this way should say, we will take our money and spend it in our own way, you have got practically two organizations, and you have split the efficiency of it. They never would do it. It would not last more than a year. It seems to me the beauty of it is that it is done by this organization, we turn our money in to the secretary, and he looks after it. Nothing runs of itself, and if those individual advertisers are to get together and run their ads separate from the Guernsey Breeders Association, that means another organization for that purpose, and I think I should be opposed to that for that reason.

President: How would you feel on the sale list, Mr. Edgerton?

Mr. Edgerton: I have not thought anything about it, but I am quite ready to subscribe to that as a good thing, although I believe, as Mr. Fox, the secretary does, that the sale list is obsolete in a week, they are changing all the time, and some animals are in the sale to-day that the man perhaps does not want to put in to-morrow. However, so far as we are concerned, I think perhaps we would take part in that also.

President: At least you would feel that the Association should if even a small number were anxious to do it.

Mr. Edgerton: Oh yes, we should not oppose that.

Mr. John H. Williams: It was said that just a few of us breeders are advertised here, and it was said we had everything in our own hands, and so we let this out so everybody could help, and I think this plan we started out last year is a good plan. It looks to me that way. It looks to me to be as

good a plan as you can get, and we can better that plan by inviting everybody to give a little, $25; they will get $25 good out of it anyway, if they have only 2 or 3 animals to sell. I think it is a very good plan.

President: Mr. Williams had reference to the time when each one donated so much, every man $175, or $150.

Mr. Williams: Yes, and $350. Some of us older breeders know what it is.

President: They then donated equally, and all paid in for the ad, and only about 5 or 6 did. At the present time nobody can pay over $100, and it goes down to the man who donates $25, and his name appears in the ad; that is what Mr. Williams refers to. Who else has something to say on this subject? Would you be in favor of a sale list, Mr. Williams?

Mr. Williams: No, it does not strike me very strong.

President: If there are a large number prefer and want it, do you?

Mr. Williams: Yes, I will help it along.

Mr. Fruit: Running two ads would cost a great deal more money than it does now.

President: Mr. Fruit asks if carrying two ads would not cost more money. I know they do. Two ads of course of smaller denomination would cost more than one large ad. We do not get as low a rate.

Secretary Fox: In most papers. There are some papers that it would not cost more. There are one or two papers have a flat rate.

President: Just as much for an inch as six inches, but the majority of papers make a reduction in rate for 6 inches. Is there anything more?

Mr. Peacock: In reference to the sales list, it seems to me that unless a specified time is given on the sales list, it will be inefficient. Supposing that we get out a sales list, and advertise a cow, and describe it for sale, and it just particularly suits a man. He goes to that man who advertised it for sale, and finds that it has been sold. That might happen right straight along on the sales list. You get out a sales list to-day, and the day after to-morrow there is not a thing a man could buy, if he followed up the sales list, unless there is a specified time that that article should stay on the sales list, it seems to me.

Mr. J. R. Love: Mr. Chairman, that they get on your advertising. A man can write to you to-day for an animal, and you price that animal, and to-morrow another man comes along and buys that animal. You have already priced it. There was a man walking up with me today, told of a similar instance where he priced him two heifers, and he bought them, and he had priced them to two other men, and he received two checks for those animals, and he had to return that money because he had already sold the animals. It would stand good in that just as well as it does in the sale list. The sale list as it was printed before was almost self-supporting, I believe, because each animal that was listed in your sale list was assessed so much, I believe 50 cents for a grade, and a dollar for a pure bred.

President: I am going to ask Mr. Schroeder to say something on this. This question of advertising is a science, and a study, and none of us know very much about real economical advertising, and the best of them cannot tell us too much. But I will call upon a man who has given some study to the matter on the idea of separating our ad and carrying two instead of one.

Mr. Schroeder: I do not know whether I understand that, carrying the advertisement separately, you mean one advertisement?

President: The Association spend about $200 each year carrying just an Association ad, and individual breeders could subscribe about $1400, as last year, to carry their ad, and carry it separately.

Mr. Schroeder: It seems to me that the greatest number of people are getting the largest amount of good out of the present system of advertising. Each individual who is spending money under your present system of advertising could carry an individual advertisement. They might get together and carry it as a combination advertisement, strictly under their own names, disregarding the Association entirely. In that way, they would be doing themselves the good, but would not be doing any good particularly for the Association. As they are doing their advertising at the present time, they are doing themselves good, and they are also doing the Association and every member in the Association, and in fact the entire county of Waukesha, and I believe that the present system of advertising stands above all other systems of advertising that I know anything about, so far as doing something for the community is concerned. If this advertising is not producing results, and the men still feel that they want to do something in a philanthropic way for the Association, let them continue to run that advertisement in that way. This does not preclude their running other advertisements separately, or if necessary for them to sell their goods that way. The suggestion that was made by the gentlemen who was immediately back of me is all right in this way, that each and every herd might be assessed according to the number of animals there are in it. He is broad minded enough in his argument to feel that he wants to carry the responsibility of this advertising as much as anybody else; and if each and everyone of the members of this Association would feel that same way, it would be good and well for them to do the advertising on that plan. But the plan is not as open as the present time is. Under the present plan a certain number of men have gotten together and devised this plan, and they let anybody come in that wants to. The plan that the gentleman proposes will force each and every man into, whether he wants to come in or not. So far as I am able to see, the present system of advertising that we are doing is the broadest minded and most philanthropic; it is doing something for many people who are not paying anything for it. If each and everyone of the men here feels that he wants to do something for the Association, then do it under the taxation system proposed by the gentleman in the rear. That is my way of looking at it. It does not stop anybody from advertising. I do not believe that anybody that is advertising feels that he is going to ask everything for himself. In fact I know this much, that the public-spirited sentiment and action that governs the men who are doing this advertising is big enough to help on the other man, and I believe that is the strong point of the present system of advertising. These few men that are advertising at the present time cannot hope to supply the demand for Guernseys that is centered right here in Waukesha County. If they cannot supply it, where are they going to get it? They have got to go to their neighbors. So the neighbor who is not paying for this advertising is getting the good out of it. It looks to me like a rather broad-minded philanthropic proposition, full of public spirit, and full of that spirit which is promoting our community interests in advertising lines, whether it is the agricultural line, or any other line. I know this much, that the advertising done by this community has placed this community far above any other community in the United States in the estimation of the largest number of people in this country. You are not only known in this country, you are known all over the world. And why? Because of the advertising system which this community has adopted as a community, not as individuals. That is the strength of this Association.

(Applause).

President: I will call on Mr. Crane, of Hoard's Dairyman.

Mr. Crane: The question of advertising is a rather difficult question to trace down to specific results, as has been demon-

strated here by the testimony that was given by the advertiser this morning. About all that I can do is to corroborate what Mr. Schroeder has said. In travelling over the country, as I have for the last 3 or 4 years, especially the eastern part of the United States, I found that whenever I say Guernseys to breeders, they say, Waukesha County. Now there is a cause for this, and the cause is the advertising that has been done as an Association. And I would regret very much to see the breeders of this community advertise under any other head than the Waukesha Co. Guernsey Breeders' Association, because I think that the other men would suffer. I get Dr. Love's viewpoint of the matter, but I think that the other viewpoint overshadows his by far, because of the fact that when you speak of Guernseys to a man in this country, and he says Waukesha County, instead of saying Mr. Rowlands, or Mr. Williams, or those men whose names appear on that advertisement, he is coming to this county to get his Guernseys, because we have impressed upon him the fact that the Guernseys are here. And he is not going to confine his purchases or his review of the herds to those men whose names appear in the list, because he knows as included in the advertising, practically all the advertising carried that there are more Guernseys in this county than any other county in Wisconsin, and more Guernseys in Wisconsin than in any other state in the Union; and any man would know that these 4 or 5 men, or whatever the number is, do not own all the Guernseys in this county. From what I know of advertising, and the results that have been obtained from this method, I believe that the method now used is very hard to improve upon.

President: I would call upon Mr. Hoard, of the Wisconsin Farmer.

Mr. Hoard: I do not know that I can say anything differently from what Mr. Schroeder and Mr. Crane have said. We recognize that there are two results that we obtain from advertising. One is the direct result, and the other is the indirect result, and the question is, has the form of advertising that has been used been getting us both the direct and the indirect results. There is no doubt that it has been getting the indirect result, because Waukesha Co. is known as the Guernsey Capitol of America. It is widely heralded as having more Guernseys than the Island of Guernsey itself. So we can all of us feel sure that we have been getting the indirect results out of this advertising. There is only one trouble with direct results—we are apt not to recognize them; we are apt to take it as a matter of course, as though it would have happened anyway. And the members of the Association who have been advertising probably feel that they have not been getting any results out of this advertisement, because they have not been getting direct results, have not been getting the letters; but Waukesha County is not troubled with having a surplus of stock at the present time, and that is due to the fact largely because of the indirect results that this advertising has been getting, putting Waukesha County on the Guernsey map. Some of the members who have done the advertising claim they have not been getting the direct results of this advertising that they ought to expect, and that may be true. What direct results they ought to get of course is just an estimate, and it may be that they have been getting more direct results than they think they have been getting. I think however, that the direct results could be increased by a little more variety in the advertising, a little more variety in the topic. A sales list, I believe, could be worked with the ad that has been run. For instance, you might mention in the ad, send to some member—I would not suggest that we have the secretary do it, because I think he has got all the work he can do now, but pick out some man and call him your sales manager, or simply just choose the name at random, say, for instance, send to R. W. Rowlands for sales list, or some other name, some man who has no office now in the Association, and some one on whom it would not impose an added burden. Another way in which I think you might add to the direct results: each week some man who is paying in his hundred dollars could have a part of the ad reserved for him, telling what he has for sale, what his herd bull is; that tells half, when you tell what his herd bull is; then tell the animals, not the names, whether bull calves or serviceable, which are heifers and which are cows in milk; and then have some other man's name next time. These are simply suggestions.

As to the matter of advertising as an Association, the two might be worked together. For instance, the Association might provide $250 to place at the head of the ad. Waukesha Guernsey Breeders' Association on every ad; and right under that "there are 90 members in this Association; come to Waukesha County for your Guernseys." Then the men that are paying in their $100 a piece could have their names put down below under a heading something like this: "Among the largest breeders in the county are so and so," mentioning the names; they would pay for that part of it themselves, and the other 90 members, or the other 80 members would carry the fact that there are 90 members in this Association, I think there are about 98 to-day, or even 100 in this Association; then add "come to Waukesha County when you want Guernseys. Send to R. W. Rowlands for sales list."

Those are simply suggestions and may or may not meet with the approval of the Association. But I believe that the present system of advertising is the most economical system that you can use, and I believe it can be made a strong system for getting direct results.

President: Thank you, Gentlemen. We just have a few minutes, and there are some of the older breeders in the room. There are many others I would like to call on, who have had some experience in advertising and have paid the money. I want to ask Mr. Reitbrock, of the firm of Reitbrock Bros. and brother-in-law, to tell us what he thinks of this idea. He has sat there very patiently.

Mr. Reitbrock: I have been listening with interest, but of course as an outsider altogether. Our experience with advertising of course is entirely personal to ourselves. You have a different problem here than we have. Advertising certainly brings results if carried on continuously, and it seems to me you ought not to make a break in the system that you have been following, except perhaps inasmuch as theAssociation gets some benefit of the ad, your Association should see fit to contribute something towards the ad. But it does seem to me that this continuous advertising of the Association by whoever does so advertise, has brought you results, even though they are only indirect. It has in fact helped not only the Association here, but all of the other breeders in this state. You have advertised Wisconsin as a Guernsey center. And certainly it is of advantage in raising the value of your stock, whether you sell any or not. I can appreciate that you get better advertising and more of it by individual subscriptions, because your Association cannot afford to pay all of it. It seems to me that by working in harmony and in conjunction of the Association with these several leaders you get better results than if you divided up your powder.

President: There are other men whom I should like to call on, but I am just going to put these questions right pointedly now. Vote quickly.

All in favor of a sales list will raise the right hand—I see two.

Are there any more in favor of sales lists once a month or once a quarter—just two—well, there are not any more then who are in favor of having a sales list than just two members of the Association.

Then we will put the other question: How many are in favor of splitting the ad, the Association carrying an independent ad, and the individuals members carrying their own ad. Raise your right hand. I do not see anybody. How many are in favor of carrying the ad something similar to the way it is being carried to-day?

(The response was practically unanimous, by most of those present raising their right hand).

President: Well, I do not think there is room for discussion on that point any more. But I want to say to the members who have an idea that maybe they are not getting as good results as they should, that if they do want a sales list, or if there is even a small minority who would like to have this sales list, I am sure the board of directors will be very glad to furnish it. The men who are riding may be just outside of the center, or there may be people who think the buyers do not come quite often enough to take the surplus stock they do have. If you want a sales list I know the board of directors would be willing to have it. We cannot print a sales list for one or two men, because we are spending the money of 98 men; but if there are a small minority who want a sales list, I can speak to the board of directors, and I am sure it will be printed for you. Let your demands be known any time you feel like it. If you can get a sufficient number who desire that sales list, it will be printed. We surely want you to get just as much benefit out of the Association as you possibly can. If you have got bulls to sell, you can rest assured the officers of the Association will spend all the time they have and can afford to spend in selling the bulls, because if there is one thing we do not like it is to have the men who are beginning, telling us that they cannot sell stock, because we think if they can sell stock anywhere in the world they can sell it in Waukesha County.

Mr. Schroeder: Along that line of a sales list, I think I might suggest something that would work out quite efficiently, and might be worked out by each individual member for himself. If they feel that they ought to have a sales list, let them make out an individual sales list, and place this in the hands of those who are advertising, and whenever these members have a buyer around who is looking for stock, and they cannot supply it easily, it is very easy to know how to get it. These individual sales lists can be made as to each individual, and that will make them up-to-date.

President: In other words, they might inform the secretary or the people who are advertisers, that they have stock for sale, and give a list of them.

Mr. Schroeder: They might do it in writing, or have a little sheet printed. I know of one advertiser who is doing this regularly, and it seems to be working efficiently; I think that would be a factor involving that problem.

Mr. Peacock: I would like to make one suggestion for the small man who is not advertising in this big list. Why could it not be arranged so that the Association would print and pay for perhaps twice a year or four times a year, a list of every member of the Association, under that Guernsey Breeders' Association ad.

President: A list of the members, you mean? The secretary does print a list every year.

Mr. Peacock: Why not do it right in the ad, four times a year, or twice a year, so that the country will know, and the people that are not advertising will be known as members of the Association.

President: Do you think you could get a hundred names in one of those ads?

Mr. Peacock: I should think so, and let the Association pay for that.

President: Mr. Schroeder, can you get a hundred names in a six or four inch ad?

Mr. Schroeder: No, you cannot. That would be rather an expensive propostion. Those names would be so small you would have to use a glass to see them. I do not think that would be a practical proposition. I think that you would find it money going without producing results. To put those names in in sufficiently large space, together with the address, would cost you more money than you think. I think you might say in printing those ads "there are a hundred members in the Waukesha Co. Guernsey Breeders' Association," or "a hundred herds in Waukesha County," or you might have separate lists printed and say, "write for this list."

President: Yes, we can put that right on there nicely.

I think we will leave the matter now to the board of directors, and we will try to do something to remove this point which has been brought up to-day.

The banquet hour is now here.

There is one point we have not taken up, and that is, the discussion of our annual sale. There is a feeling among some of the members that it is getting to be quite a burden, and is selling some animals out of the county that they do not get as much for as they ought to, sometimes. Other members are enthusiastic for the sale, and are willing to put animals in it. We will hear the matter discussed pro and con immediately after the banquet hour. As soon as possible retire to this room, and we will take that matter up.

Immediately after this meeting is adjourned, Mr. Gaspar has asked that we fall in line in couples, you and your wife, or if you do not have wives, your best girl, or friend, or whoever you want to take along with you. There is a guest table, the first table to the right in front of the door. We should like to seat the further end of the banquet room first, so you who go in first go clear to the further end. For one thing, you are nearer to the kitchen, and will be treated a little better, but fill that end first anyway. We would also like to have the members see that all strangers who are here this morning are comfortably seated in the banquet room before getting seats ourselves. We want to feel that our friends are well taken care of, and I will ask the members to hold back a little and see that our friends and guests and strangers who are here with us get the choice of the dining room.

Secretary Fox: We have arranged for about 215 plates, that is all they can possibly seat at one time. I do not know just how many there are here, but we are very anxious to have everybody seated at the same time, if we can. If we cannot do that, the few that remain will be seated at a second table. Before entering the banquet hall, be sure to register at the office and buy your tickets. The tickets for the plate will be one dollar. Be sure to get those immediately after adjourning.

President: If there is no other business to come up right now, the meeting will be adjourned until immediately after the banquet hour. I will not set the time, for fear we may have a little time to spare. We will repair now to the banquet room.

(The banquet was held at Rest Haven, and about 225 members of the Association, guests and friends were present).

AFTERNOON SESSION, JANUARY 22, 1914, 2.30 P. M.

Meeting called to order by the President.

President: Gentlemen, we will take just about ten minutes to discuss the sale. We have not decided definitely whether we are going to hold an annual sale next spring or not. We have held four sale, and we want to get and idea of how the members feel about it at the present time. Before the directors have been somewhat up in the air, so to speak, and did not know whether we could hold one, or whether we are short of animals. Some people are enthusiastic, some people lukewarm. We would like to know what you think about it.

Mr. J. R. Love: I do not believe we can afford to do without a sale, if we ever expect to hold one in the future: it

looks to me as though it is necessary to hold a sale this year, because if we drop one sale we lose the prestige we have already gained. That is my opinion of the sale.

President: You think we ought to have one?

Mr. Love: I do.

Dr. Love: I am mighty strongly in favor of a sale.

President: You are in favor of it?

Dr. Love: Yes, sir, but I have nothing to sell. I have two that I might put in the sale, but it do not believe you would permit them; they are both blind.

President: Mr. Love, you are in favor of the sale; suppose we run short, what is your idea of finding animals for sale?

Mr. J. R. Love: I have been one of the board of directors every year, and this same proposition has come up at every sale. When we first start out we do not have enough, but the day of the sale the cattle are always there. Where there is a will, there is a way.

President: Mr. Wendt, what do you think about it?

Mr. Wendt: I think it is a good thing for the Association to keep up their annual sale. I do not think I would be able to help out very much this year, but I think we ought to have the sale.

Mr. Laney: I think that the sale is a fine thing, especially from an advertising standpoint. I think it is one of the finest advertising stunts we can get hold of.

President: What is your idea of getting enough animals?

Mr. Laney: That is a stiff proposition. I do not know where we can get them. I do not know as we can put in any animals this year.

President: Would you advise buying some animals?

Mr. Laney: I think that is a very good idea, if you can make some money on them.

President: Mr. Longley, what do you say?

Mr. Longley: I think it is a good thing to hold the sale if we can get the number of animals, and give such a sale as we had before.

President: If we are going to get the number of animals, but if we cannot get them, what is your idea?

Mr. Longley: I haven't any idea.

President: In our own locality. Suppose you cannot find animals right here, any Waukesha animals.

Mr. Longley: If we can buy animals, and buy good animals, why we can get them put in the sale.

President: Buy them so the buyer can guarantee them to the public.

Mr. Longley: Yes, you have got to guarantee them to the public when you sell them.

President: I say buy, and buy such animals as you can guarantee to the public.

Mr. Longley: Yes.

President: Who else has some ideas on this question. Is there anybody opposed to the sale? Let me hear from that quarter. Gavin McKerrow, what have you got to say about it?

Mr. Gavin McKerrow: I want to say that we are all, that is, all the McKerrows, in favor of the sale. We are in favor of it from an advertising standpoint especially, and while we do not have anything we really want to sell, and are not anxious to put any in, we would be willing to help with some animals. I would not say a great many, but we would be willing to put some in this year.

President: What do you say, Mr. William M. Jones?

Mr. William M. Jones: I am quite in favor of the sale, but I have not very many animals to consign this year.

Mr. J. R. Love: A year ago I think the time he was asked, he had two to put in, but when we got to work he had a great many more. I think it will be the same next time.

Mr. John H. Williams: I think the sale is a good thing from an advertising standpoint, but I do not know whether it is a good thing unless we can get plenty of cattle, the majority from our own county. That is the way I look at it.

President: You believe in having the majority from this county?

Mr. John H. Williams: I would rather see the majority from Waukesha County: it would look more like Waukesha Co. cattle.

President: You think it would be all right to buy some animals?

Mr. John H. Williams: I think it would be all right.

President: Providing we can buy animals we can guarantee to the public.

Mr. John H. Williams: Yes. It was a high class sale last year, and there were a number of other animals that were just as good as any put in the sale. We do not always happen to get that luck. They proved to be good. They were carefully bought.

President: Mr. D. L. Williams.

Mr. D. L. Williams: I have not been putting any in the sale. The simple reason why I have not been putting any in the sale is because of the laws of the sale. I do not like the laws of he sale. You haven't a bid. I bring possibly a thousand dollar cow—you wonder possibly whether I have got a thousand dollar cow, but I have got a good many of them—and I would not want to put that $1000 cow in the sale thinking that I have not got one bid to put on that cow. And according to the laws of the sale, you cannot put one bid, you have got to stand by it, if you lose $500, and I cannot sacrifice $500 on a cow.

President: Anybody else anything to say on this point?

Mr. Thomas Stewart: I haven't got anything to sell.

President: What do you think of the sale?

Mr. Stewart: I think it will be all right.

President: You think it is all right, and a good thing?

Mr. Stewart: Yes, I think it is, but I have not got anything to put in.

President: Everybody seems to think it is a fine thing, but keep out of the water, that is what it looks like. We cannot spend very much time discussing it. If you have got anything more to say, or any changes that you might suggest in any way we would be glad to get them, but we cannot spend much time discussing it. If no one has any more remarks to add, we would like to close the discussion. We should like to carry it on, but we haven't got the time.

Mr. Fox: One name has been suggested to add to the list. I have one, Mr. C. R. Gilman, Waukesha.

President: If you think of any more, I am going to call for new members in just a few moments, and that will be the last opportunity. We have a committee on resolutions appointed, and we will hear from that committee at the present time if there are any resolutions to offer.

The report of the committee on resolutions was presented by Mr. Gavin McKerrow as follows:

"WHEREAS, since the last regular meeting of the Waukesha County Guernsey Breeders' Association one of our honorary members, Samuel A. Fox, has ceased his labors on earth and been called to that rest which remains for those who have faithfully followed the Divine Will:

And, WHEREAS, the Association has many times been greatly benefited by the wise counsel, good judgment and sound advice of our deceased member, who was always ready and willing to do all his power to advance its interests and maintain the objects of its organization:

RESOLVED, that members of the Waukesha County Guernsey Breeders' Association express their deep regret and profound sorrow at the loss of one so useful, upright and true, not only to this Association, but in all the many activities of his well spent life.

BE IT FURTHER RESOLVED, That we offer to the widow and family of Mr. Fox our heartfelt sympathy in their bereavement, knowing, however, that their burden of grief must be lightened by the consciousness of his love and fidelity and the bright example he has left to those who know him best on this side of the river of death.

BE IT FURTHER RESOLVED: That these resolutions be spread on the minutes of this meeting and a copy thereof be presented to the widow of our deceased member.

WM. M. JONES
GAVIN MCKERROW."

President: All in favor of the resolution as read will please stand.

There is no contrary to that, Gentlemen.

President: We will give you at the present time an opportunity to present the names of new members. We have the name of Mr. C. R. Gilman for one, and I would like to get the name of Mr. Howard Hubbell, and I think another gentleman, Mr. Lawson, mentioned the name of another man.

Mr. William Lehman, of Woodland.

These names of new members will be referred to the board of directors, as were the previous sixteen names that have been presented here to-day.

I am pleased to inform our visitors anyway that this ends our business session, and we are ready to go forward with our program for the afternoon.

As usual, the President's Address will be dispensed with, as has always been the policy, to save time.

The first thing this afternoon will be a solo by Miss Fannie Peterson, of Carroll College. (Applause)

Solo—Miss Fannie Peterson (Carroll College).

President: The next number is an address by Mr. Earl Roberts, Oconomowoc, on "Feeding and Breeding for Advanced Registry Work." I take great pleasure in introducing Mr. Roberts to you at this time, though we all know him pretty well. (Applause)

Mr. Earl Roberts, Oconomowoc, addressed the Association as follows:

Feeding and breeding and their relation to each other in Advanced Registry work is a subject which at once opens up for discussion the entire conduct of this most important and interesting branch of our diary business. We hear much discussion as to the relative importance of the care and feed on the one hand and the natural ability on the other hand. We hear views expressed which vary from the extreme in one direction to the extreme in the other. But to any student of the subject the relative importance of each one is of far less import than a craeful consideration and study of each one.

The subject of feeding resolves itself into a consideration of balanced rations, proper combinations of different kinds of feeds, regularity, variety, palatability, and probably most important of all, the good judgment of the feeder.

The study of balanced rations is a technical study. In practice it is best to accept the conclusions of investigators who have spent years of careful study and have drawn their conclusions from experiments extending over a long period of years. We have at our command tables of requirements for cows giving a certain amount of milk of a certain fat content, together with a table of digestible nutrients of all the ordinary feeds.

We know that the most efficient ration is a balanced ration, but experience has also shown that the ration for maximum production is not always the ration for the most economical production. It is the sameas in the case of a steam engine where the power representing the maximum output of that engine is not the same as the power representing the most economical output. That is to say, an engine may develop, let us say, a maximum of 20 H. P., at a certain cost per H. P. But if we run that same engine so as to develop only 15 H. P., it might do so at a smaller cost per H. P. So, in like manner, a cow might be fed so as to produce, let us say, 600 lbs. of butter fat in a year. But if that same cow were fed so as to produce only 400 lbs., she might do so at a less cost per lb. And so in Advanced Registry work we are confronted by a problem a little different than in the case of ordinary production. And right here lies one of the hidden abilities of a truly great cow. A cow, which when fed to her limit and at the same time produces butter fat at a low price per lb., is surely a better cow than one which can produce just as much but produces it at a cost per pound considerably greater than if she had been fed so as to produce considerably less. And so here we find one of the great benefits of Advanced Registry work and one upon which, I fear, many of us have not yet laid sufficient stress, but one which is a keynote for the development of a high producing herd which, at the same time, is an economically producing herd.

Now in feeding we find that while a ration may be perfectly well balanced, yet it may not be a desirable ration, and for two reasons: It may be excessively expensive, and it may be one which would be injurious to the system of the cow. I believe we should endeavor to raise on our own farms as large a portion of our feed as possible, and the work that our Experiment Station has done along this line and especially so through the efforts of Prof. Moore in aiding the introduction of alfalfa growing, and in introducing grains with a higher protein content should be given due praise. No cow can stand the strain of heavy feeding on high concentrates without a liberal amount of good nutritious roughage, and alfalfa, properly cut and properly cured should be a part of the ration of every high producing cow. And I believe, furthermore, that we are not raising or feeding roots as liberally as we should. Here in America silage is rightfully our great succulent feed not only for winter but for summer as well. Roots have about the same feeding value as silage but cost more to grow and require more labor. But they are important in the ration because they give variety, and besides this it is a well known fact that if cows receive a reasonable amount of roots they are able to assimilate a larger amount of grain without producing any bad effect.

There is one other thing which should receive our consideration at this time and that is that a ration containing an excessive amount of protein acts as a stimulus for a greater flow milk. But there is a great danger in feeding such a ration because it affects the breeding power of the animal, and there is no doubt but that many great cows have been ruined in this way. It is better to play safe and take a little smaller record, a record really consistent with the ability of the cow than to ruin her by feeding a ration against which nature rebels and deals out the penalty accordingly.

And in just this connection we find the greatest objection to Advanced Registry work. We frequently hear the statement "I would sooner have a good producing cow without a record than to have one after she has been forced for a high record." I was very much interested recently in reading in the Xmas number of the "Breeder's Gazette" the views of several practical authorities on this subject. The concensus of opinion seemed to be that while many cows have become barren because of overfeeding, yet the true feeder should and does guard against this very thing and knows when the safe limit of production is. And so, as in the case of all achievement, the secret of success after all lies in the good judgment of the man back of it.

In a short discussion of this kind it is impossible to even touch upon all the principles of breeding involved in relation to Advanced Registry work. But the one great fact that stands forth is that the milk and butter fat producing ability of a cow is an inherited characteristic and is inherited according to fixed rules. Experiments seem to indicate that the

influence exerted by each generation is, if considered in a large number of cases, fixed. And investigators tell us that the two parents together exert an influence of one-half, that the four grandparents together exert an influence of one-fourth, and so on. The most practical fact, it seems to me, to be gathered from this is the importance of the first two generations because according to the rules these two generations exert an influence equal to 75% of the whole. And so if an animal is sired by, let us say, a great grandson of some famous individual, that in itself should not carry too much weight in our selection.

But we find that some animals are more prepotent than others. That is, they possess the ability to transmit to their offspring, their characteristics to a greater degree than the average as stated in the law referred to above. And so the general rule of selection must be modified in any particular case, either one way or the other, according as to whether the prepotency of the particular individual is known to be above or below the average.

One more point I wish to touch upon is the question as to whether an acquired characteristic may be inherited. This is a point which is responsible for much confusion as well as argument. Let us consider a special case. Suppose we have a cow that under ordinary normal conditions will produce 300 lbs. of butter fat in a year. Now let us feed and develop her so that she produces say 500 lbs. of fat. Will her offspring have a greater tendency toward a higher production because of the fact that she has been fed for this high record. Now it seems to me that while this may be a good field for investigation, yet for the practical breeder it is after all of little if any real importance, and for this reason. The great value of Advanced Registry work is to aid us in our selection. It is by far the most reliable criterion by which to make our selection Without it we are at sea and cannot tell what our results will be. Yeksa Sunbeam was purchased before her famous record for less than the present price of an average grade cow. If we use a sire in our herd from a dam of uncertain producing power we may be grading up our herd more rapidly than we should have reason to believe. But, on the other hand, we may not be grading up at all, but may even be grading downwards.

Now the A. R. rules provide for a yearly test. This necessitates the delaying of the breeding of the animal for several months which sometimes makes it difficult to again get the cow with calf especially in the case of older cows. This has been the object of criticism by a great many and a change to a ten months' record has been advocated. While the ten months' records might reduce the frequent ruinous effects referred to above, yet I am inclined to think that it could be abused in the same manner although to not as great an extent. Furthermore, all records made up to the present time are yearly records and a change to a different period would produce much confusion in the comparison of records.

No achievement worthy the name was ever acquired without some difficulty. And so, while there are difficulties and even pitfalls, yet the advantages to be gained are so many that I believe many more should engage in this work. Ask yourself not, "Can I afford the extra time and expense necessary in this work?" but rather ask, "Can I afford to delay longer the start?" Many, I fear, delay starting, continually waiting for something sensational. Of course, a great record is a sensation in the breed circle, and while it may lead to great immediate financial returns, yet I believe that several good average records will do more toward the development of a good profitable herd than will one large record. For after all it is the raising of the average production of the breed which is more to be desired than merely the development of a dozen or two sensational animals, to the neglect of the rest of the breed.

In conclusion I would say that the A. R. work if conducted properly and under reasonable and sensible conditions will result in few if any bad effects. And the cows should come forth from their year's work, not ruined beaten animals, but should be even better individuals than before. Their capacity for assimilation should have been increased, and their persistency of milk flow should have been fixed. And so in closing I would advance the slogan "A. R. work for more and better cows."

President: I am sorry that we have not the time to take up Mr. Robert's subject and discuss it. He has certainly covered it very thoroughly, and we are indebted to him for having the question presented to us in such a way this afternoon.

We have had a telegram from Professor A. W. Hopkins, saying that he will not be able to be here this afternoon. We are very sorry, as we looked for something good from Professor Hopkins. He has always given us something good when he was here in the past.

For this reason we will have the next two numbers on the program in succession.

The next number is a duet by Mrs. Evangeline Olson, Miss Vinette Mishler and Miss Antoinette Kuehn, Accompanist.

Duet by Mrs. Evangeline Olson, Miss Vinette Mishler.
Miss Antoinette Kuehn, Accompanist.

President: The next number on the program is by one whom we know so well that he scarcely needs introduction. Professor Humphrey has tramped up and down the state of Wisconsin from one end to the other, from top to bottom, and from east to west, organizing these breeders' associations, and I am reminded of the story of the two Irishmen who came to this country and were walking down the railroad track; the train came behind them, and one of the Irishmen promptly jumped over onto the bank; the other Irishman ran down the track as hard as he could; his partner called to him to get off the track as fast as he could, and his reply was, "You spalpeen, if I can't beat him on the level, how do you expect I am going to beat him up the hill." (Laughter) It certainly gives us pleasure to have Prof. Humphrey with us this afternoon, and I am very glad to introduce him to you now. He always has something interesting, and something that we are pleased to listen to. (Applause)

Professor G. C. Humphrey, of the Wisconsin College of Agriculture, spoke as follows:

Mr. President, Ladies and Gentlemen, Members of the Waukesha County Guernsey Breeders' Association: I am sure that I always enjoy coming to Waukesha County, and am glad to be here to-day, and to look into your faces again. It is true that I come here quite often and have this opportunity, and yet I notice in the audience to-day a good many strange faces, which leads me to believe that the Waukesha County Guernsey Breeders' Association is increasing in membership and progressing, as we are told all through Wisconsin, and in other states of the Union that this Association is growing and developing and doing the work which it is doing in the way of developing the dairy interests in this county.

The audience looks very complete. I was thinking a few moments ago, that it was too bad the cows were not here. (Laughter). I am sure they would enjoy the sentiment of the songs that we have just listened to with reference to cows in the clover (laughter), and I think the sentiment they would appreciate in particular is "I love you." (Laughter). I am sure the people of Waukesha County are in love with their particular breeds, and that you as an Association, are in love with the Guernsey cow. The Guernsey cow to-day is a representative of a breed. And in attempting to find something to talk about this afternoon, I do not know but what I

ought to have acted on the suggestion of Mrs. Humphrey, when she said, "talk about a minute." (Laughter).

But I knew that you would expect more than that, and it occurred to me that there is a subject which refers to the one on our program, the maintenance of breed excellence, which would undoubtedly interest you, and one in which every breeder of grade and pure bred livestock should be interested in, because of the importance of this matter of maintenance of breed excellence. I felt somewhat embarrassed, however, after choosing the subject, because it is a new subject, and one on which I have not practised as I go up and down the state of Wisconsin. (Laughter). There are some subjects that we get into the habit of discussing, and have good opportunity to practice up, and practice helps out wonderfully.

In discussing this subject, therefore, I hope that you will pardon me if I refer to what I have written, and would like to include in what I may say this afternoon on this subject of the maintenance of breed excellence. I regret that it is not all prepared, but I wish to assure the secretary of your Association that I shall be glad to complete it, and in that way relieve your stenographer from taking further notes on what I may say.

Breed excellence and maintenance of it, concerns, as I have already said, every breeder of grade and pure bred livestock. The standing popularity and success of breeds depends upon breed excellence. The future prominence of a given breed, the respect and admiration which people will have for a given breed, and the profit which men will realize upon what they have invested in animals representing a given breed, will depend upon breed excellence.

Breed excellence refers to those characteristics possessed by a large number of cattle in common, which gives them identity, fixity of type, a superior value in serving a given purpose, and an ability to reproduce themselves in successive generations with all of these characteristics preserved.

Guernsey excellence, for example, refers to a combination of those characteristics given to this breed, including cattle of medium size, fawn and white color, rich yellow secretions, beautiful outline, intelligent, gentle disposition, and ability to produce economically milk of rich yellow color.

Breed excellence may be contrasted with nondescript character, lack of uniformity in type, irregularity in the manner of reproduction, and an uncertainty of profits, all of which are characteristics of our common native animals and of grade and pure-bred animals of inferior type.

Breed excellence is the result of systematic and painstaking effort on the part of those who have been concerned in the foundation and development of our breeds, and of the work of the same character that is being done to-day in the preservation and further development of breeds by those actively engaged in breeding. This work, where successful, is being done to-day, and must be done at all times on the basis of well defined principles. With the increase in the number of cattle of a given breed and in the number of people who breed them, there is not the increase in understanding on the part of men with reference to these fundamental principles which have to do with successful livestock breeding.

These fundamental principles may be enumerated as follows: High ideals, based upon intelligent observations and wise conclusions regarding the fitness of animals for serving a given purpose, the selection of animals which correspond to a character ideal, a high regard for purity of breeding, well-established bloodlines, and ability to perform their functions satisfactorily, mating to correct common defects, the elimination of animals that are hopelessly deficient in character and ability, and last, but not least, a high regard for liberal food supply and all that tends to insure the proper development of each individual into what otherwise might become a sad disappointment.

The fundamental laws of heredity and variation necessitate strict adherence to the above principles. Heredity is better understood as the law that like tends to produce like. I might say here that I heard a story; perhaps I have told it before; I do not know how often I tell my stories; I have a few of them to tell once in a while to illustrate these subjects. I heard one not long ago with reference to this matter of heredity. It referred to a man who was boiling sap in a sugar bush. He was standing by the empty sap barrel, watching the kettle boil, when he heard a noise in the tree above him; he turned and looked back, and it is claimed that a panther was about to spring upon him; he simply had time to jump to one side, and fortunately the panther went into the open barrel, which he quickly turned bottom side up and got on top of it; that saved him; but the situation was perplexing because of the fact that he did not dare get off of the barrel. The panther wheeled about in the barrel, and it happened the bung was out, and the tail happened to come out. It is claimed that the man grabbed the panther by the tail and tied a knot in it, and then ran for his life, (Laughter) and for his gun. Upon getting the gun and going back to the sap bush, the panther and barrel had disappeared, and he had to give it up after looking about, for he could find nothing of the panther or the barrel. Time went on. A year later he was in that sap bush again boiling sap one day, and again heard a noise in the tree, and he looked about and, as the story goes, he saw the old panther with that sap barrel tied to its tail, and behind that panther were nine little panthers, and each pretty little panther had a barrel tied to its tail. (Laughter).

I might say that this law of heredity, as we understand it, is the law that like tends to produce like. If that law will produce any such results as that, it is something that we certainly must be concerned about, with reference to what it will reproduce in the character of animals with which we are dealing.

Variation may be defined as the law that like does not tend to produce like. The two laws are often considered antagonistic to one another, and in many respects are. Oftentimes, however, variations which are noted in the types of two animals are but the result of heredity or the predominance of characteristic given to some more or less remote ancestor about which the breeder has no knowledge. This emphasizes the importance of well-established blood lines and prepotential on the part of animals in transmitting those characteristics most desirable.

Only in the use of bred and tested for production sires and dams can the breeder of dairy cattle be most certain of realizing that which constitutes his ideal. This will tend to overcome many of the disappointments with which the breeders meet at the present time, and about which our people are concerned.

It must be admitted that there are many disappointments which come to the man who believes in a high ideal upon so-called standards for changing animals, and upon the basis of records made in advanced registry tests. These ideals are necessary, however, and the disappointments which come to the true breeder of livestock only spur him on to greater work and effort to succees. To him we owe much for breed excellence and its maintenance. Conditions of environment are the chief cause of variations which develop in well-established blood lines and in the maintenance of breed excellence.

As animals become generally distributed, animals of our pure breeds become generally distributed throughout the state, too much emphasis cannot be laid upon all those conditions which influence animals in their development for good or for bad. Sanitary barns, proper methods of care and management, all tend to produce favorable conditions of environment, and to insure the maintenance of breed excellence, while a disregard for them endangers the welfare of our breeds.

The matter of maintenance of breed excellence conerns the breeders of pure bred stock, and those who are in love with the distinct breed, more than it does anyone else. We have people concerned to the extent that we have our definite organizations to-day for establishing breed excellence and for preserving it. You have your national associations; you have your advanced registry system; we have our various state organizations; we have, we are proud to say, in Wisconsin, our community associations; we have our cow testing associations; we have our educational institutions; we have men who are devoting their time to the publishing of live stock periodicals, that are doing the work of maintianing breed excellence.

To reduce the matter of maintenance of breed excellence to the most practical basis is a work that should be given careful consideration by all of our breeders of pure bred livestock. It is a work that we hope to encourage in these community association, to the extent that they will be more careful in the guarding of that matter of breed excellence.

Too much time and effort and energy is required to establish new breeds. Our success in dairying and in livestock production of all classes should be carried on with breeds that have already been established for many centuries.

In discussing this subject to this extent, it undoubtedly will set you to thinking, and offer many suggestions. There is one particular phase, one particular factor, which I would like to emphasize in what little time there is at our disposal this afternoon. It is generally recognized by all breeders of live stock to-day, that the sire constitutes the most important factor in shaping the character of our breeds. I am here to-day to say that as I travel up and down through Wisconsin, as I go out among the farmers and observe the use that is being made of sires, there is much to give me encouragement. I believe to-day that the common promiscuously bred sire is being rapidly replaced by the pure bred sire with his long pedigree, his certificate of registry. In too many instances, however, I find that there is little knowledge concerning the pedigree, concerning the individuality of that particular pure bred sire. And I feel to-day that every man who has the interests of a breed at heart can well afford to give particular attention to the work of creating a greater appreciation on the part of farmers and of all classes of people for that pure bred, bred for production, and tested sire. The tendency is to buy a young calf and grow him up to become the sire. He is used perhaps one, two, two and a half or three years, sometimes until he begins to show signs of ugliness and ill disposition, and he is sent to the butcher, and another sire is purchased. Too many times his progeny, his daughters are maintained, cared for in a promiscuous way, not appreciated, and I believe to-day in the state of Wisconsin that even among breeders of pure bred stock we are too careless in the character of sires that we are putting at the heads of our herds. We are taking chances on animals with pedigrees; we are taking chances on animals with advanced registry productions, which is the best thing that we can do up to that extent; but a thing that we might better do in a good many instances would be to include with those qualifications the qualification of the daughters of that sire, and I believe to-day, that the state of Wisconsin could well afford to do something to recognize that class of sire, to the extent that men will not turn them in to the butcher, which puts an end to their existence at a very young age; to the extent that men will not allow these sires which possess that prepotency, that power of transmitting the most desirable characters and qualities to their offspring, will not permit them to go to other states. We find instances of that very frequently as we are travelling through the state of Wisconsin. At a fair in northern Wisconsin this fall, a beautiful dairy sire, pure bred, was lead into the show ring, along with him were a group of his daughters, exceptionally fine individuals, which led me to believe that there was a sire that perhaps was worth thousands of dollars to that community, by being able to produce the type of daughters that were produced in that community by him. The owner had contracted the butcher to take that animal to the shambles at the close of that fair. There was no one there appreciated him well enough to pay $100, the price the butcher was paying, to continue his use in that community and it seemed to me a crime. In another instance where I have visited a herd, one of the best herds of a given breed that we have in the state, there is a mark of prepotency on the part of a sire, as you look over the young animals of the herd. That animal was offered for sale because of the necessity of making a change. No one in Wisconsin appreciated him, and he went over into Minnesota, and Minnesota to-day is getting the benefit of that animal which ought to be doing service in Wisconsin. And we observe these things as we travel about through Wisconsin. As I say, I believe that the state of Wisconsin could well afford to do more than it is doing to-day for the preservation of these sires that develop and prove themselves able to do perhaps more than any other thing in the maintenance of breed excellence.

I am discussing this matter this afternoon before this Association, representing the Guernsey Breeders' Association of Waukesha, and representatives of other breed associations in this county, for the reason that we have lots of respect for the growth and the development and the power which is back of your associations. These associations have gained a dignity and a power which I believe, if they appreciate that very fact that I have just mentioned with reference to doing all that is possible for the preservation of these tested and bred for production sires, that we can have state aid, if necessary, we can have some aid, we can have the sentiment at least, that will help people to appreciate better these bred for production and tested sires.

This subject is going to be discussed at our farmers' course on the day of our livestock breeders' association meeting, and it is hoped that there will be a strong delegation from every county, with ideas on this subject, that will help that meeting to develop something in the form of a resolution that will lead to some action along this line. And I am here this afternoon to say that I believe the state of Wisconsin, with all the progress it has made, standing foremost of all the dairy states in the United States, can very well afford to sacrifice considerable in order to be the first state to take some definite action along that line. I thank you. (Applause)

President: Gentlemen, I hope you will not pass out, especially the board of directors, which meets upon the close of this meeting.

The board of directors will meet immediately upon adjournment of this meeting for election of officers.

I want to call attention to a few things. Immediately upon the adjournment also we will be glad to receive membership fees. We are just opening another year, Gentlemen, and we want the same loyal support and the same unselfish support that we have had in the past, to make the Waukesha Guernsey Breeders' Association still larger and stronger than it is to-day. Waukesha County cattle are being shipped all over the United States, and we want to have them to continue to be so shipped, and we want a still larger demand, and we want still more breeders to begin breeding Guernseys among us, because we do not anywhere near raise enough to supply the demand. And these breeders who are beginning, may find it hard sometimes, and they may sometimes think an animal does not sell quite quick enough. We wish them to notify the officers and have them keep in mind that they have some animals to sell, and you can rest assured your animals will sell sooner than you think. I have seen the time that I had six and nine bulls, and I was afraid the market was going out

on Guernsey bulls, and in a short time, instead of having six, I might have none, and be wishing I had more. They may not move as quick as you think they might, but they are just as good as cash in the bank.

Another thing I want to mention is the livestock association. That is a great way of advertising our livestock to the state. Last year a large number of our members joined, and when you got the booklets you noticed a long list of members, something like twenty-five or thirty. There were more Guernsey members from Waukesha County than any other county in the state,not leaving out any other breed, and we want to be the same in 1914, when the pamphlet is issued. I just call your attention to those things.

The board of directors must not forget that we will meet, possibly in the room adjoining here, for the election of officers, immediately after the meeting.

Please come forward and pay your fees, so we can have a good clean bill of health next year. Last year we only had eleven who had not paid their dues; next year let us have it so that there will be not a single member who has not paid his fees. So if we have just an even hundred paid-up members that money will be in the treasury, and there will be no complaint to present next year.

We will now have the last number on the program, which is a duet by Mrs. Evangeline Olson, Miss Vinette Mishler and the accompanist, Miss Antoinette Kuehn.

(Duet—Mrs. Evangeline Olson, Miss Vinette Mishler, and Miss Antoinette Kuehn, accompanist).

President: This completes the program for this afternoon. We thank each and every one for being with us, and hope to see you all next year. And bring another friend along with you.

The meeting is now adjourned.

The following directors were elected to office for the coming year by the Board of Directors:

President, Earl Roberts, Oconomowoc; Vice President, R. W. Rowlands, Waukesha; Secretary, Gavin McKerrow, Pewaukee; Treasurer, John H. Williams, Waukesha.

F. E. Fox, Secretary.

PINE GROVE GUERNSEY FARM.

Pine Grove Guernsey Stock Farm, Doylestown, Pa., sends us an attractive catalogue of a number of Guernseys for sale. Mr. Ott states he has the finest lot together he ever owned. They are rich in color, with good udders. Each animal is strictly guaranteed.

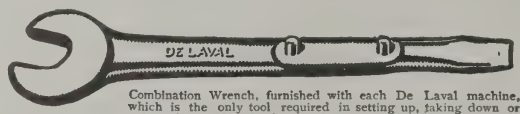
The Simplest CREAM SEPARATOR Ever Built —



DE LAVAL

EXCELS ALL OTHERS not only in thoroughness of separation, sanitary cleanliness, ease of running and durability, but as well in its great simplicity.

THERE IS NOTHING ABOUT THE OPERATION, cleaning, adjustment or repair of a modern De Laval which requires expert knowledge or special tools.

NOR ARE THERE ANY PARTS WHICH REQUIRE frequent adjustment in order to maintain good running or to conform to varying conditions in the every day use of a cream separator.

Combination Wrench, furnished with each De Laval machine, which is the only tool required in setting up, taking down or using the De Laval, the simplest cream separator ever built.

THERE IS NOTHING ABOUT THE MACHINE THAT cannot be taken apart, removed or replaced by any one who can use a wrench or screw driver. In fact, the only tool which is needed in the use or the operation of a De Laval Cream Separator is the combination wrench and screw driver illustrated above, which is furnished free with every machine.

The De Laval Separator Co.

The Automobile King
HENRY FORD

Employer of 17,000 men, is the *greatest mechanical expert* and *factory manager* the world has ever seen

He knows material and construction from A to Z. He knows a good thing when he sees it, in separators as well as automobiles, having studied farming intensely as well as mechanics.

Mr. Ford owns **three dairy farms.** On each of these three farms he uses a

UNITED STATES
Cream Separator

Mr. Ford is not an exception in his selection of a cream separator, for most of the other captains of the automobile industry use the **United States Cream Separator** and will have no other.
Among them are:

H. M. Leland, *Cadillac* **W. E. Flanders, *Maxwell***
H. B. Joy, *Packard* **G. C. Hupp, *Hupp***

Dont you think you can well afford to have a **United States Cream Separator,** which holds the **world's record** for **closest skimming** in **fifty** consecutive runs lasting **thirty** days, with milk from **ten** different breeds?

UNITED STATE DEPARTMENT OF AGRICULTURE
Bureau of Animal Industry
Washington, D. C.

December 20, 1913.

Mr. Thomas F. Ryan,
Oak Ridge, Va.

Sir:—In accordance with your signed agreement with this Bureau, the regular annual retest with tuberculin was applied to your herd of cattle by Dr. C. E. Lindburg of this office upon Dec. 12 and 13. As a result of this retest your entire herd of 65 cattle was regarded as free from tuberculosis.

Very respectfully,
R. W. HICKMAN,
Chief Quarantine Division.

ONUNDA FARM

Royal Favorite 20154.

Royal Favorite 20154

Sire, Ne Plus Ultra 15265.
Dam, Imp. Rosy of the Palloterie IV. 18897.
Year's Record, 718.15 lbs. butter fat.

Young Bulls For Sale

By the above well bred sire and out of daughters of May Rose King 2d and qualified for Advanced Register.

W. H. DUCKHAM, Supt.,

MADISON, N. J.

Two Tried Sires

WE offer to breeders two tried sires. We have two crops of calves from each of them and can show you that they sire good ones.

Maxwell Valentine 16060

Born Dec. 16, 1908. Sire Honest Injun, sire of Martha Valentine, 648.15 lbs. fat; another daughter now in test will finish with good record. Dam Argie Nerio 689.09 lbs. fat; dam of Nora Wayland 642 lbs. fat. A good daughter of this bull was second Junior heifer calf at the last Minnesota State Fair.

Emerita 2d's Son 16157

Born Jan. 16, 1908. Sire Governor I of the Chene, sire of Jehannah Chene 862.53 lbs. fat as a Junior 3-year-old, and of Julie of the Chene 796.85 lbs. fat as a Junior 4-year-old. See the February Journal. The dam of this bull is Emerita 2d, one of the best daughters of Fernwood Lily's Son. She made 599.99 lbs. fat at 12 years old. She is dam of Rita Spotswood 592.55 lbs. fat at 4 years, 9 mos. Again in test has made 461.79 lbs. fat in 226 days. She has another daughter that made 453 lbs. as a 2-yr-old. A full brother to this bull is in service in Anna Dean Farms herd. At the last Minnesota State Fair he had 1st Junior Bull Calf, 3d Junior Heifer Calf. It will pay you to see these bulls and their calves.

We are also offering an exceptionally good list of young bulls many of them out of A. R. cows or cows now in test. Send for list. We prefer to have our customers come and see what they are buying and see the sires and dams. Write two days ahead and we will meet you at train.

B. BIERI, Supt. Woodend Farm, Mound, Minn.

26881 **Magnet's Equal**
Sire *Imp. Duvaux Magnet* (12641)
Dam *Pocotello* (25888)
Born—June 18, 1913
Fawn with white markings.
Breeder and owner:
Barnhart & Cox, Independence, Iowa.

26882 **Golden Sequel**
Sire *Yeksa Sequel* (18737)
Dam *Lottie of City View Farm* (33420)
Born—May 25, 1913
Light fawn with white markings.
Breeder and owner:
Benjamin O. Raberding, Saint Marys, Ohio.

26883 **Zola's Standard Marshall**
Sire *Standard Marshall* (16362)
Dam *Saitapharnes's Zola* (30698)
Born—May 16, 1913
Fawn: white mark on forehead; sides white with fawn patches and spots.
Breeder and owner:
Charles M. Whitcomb, Ellsworth Falls, Maine.

26884 **Bell Boy of Fairview**
Sire *Bell Boy of Fern Ravine* (13582)
Dam *Belle of Fern Ravine* (14153)
Born—May 13, 1913
Light fawn with white markings.
Breeder—Est. August Uihlein, Milwaukee, Wis.
Owner—George A. Blank, Grafton, Wis.

26885 **Duke of Riverton**
Sire *Golden King of Pencoyd* (14430)
Dam *Lochelle* (25281)
Born—May 4, 1913
Light fawn with white markings.
Breeder and owner:
Hunter Sisters, Riverton, N. J.

26886 **Prince of Lone Oak Farm**
Sire *Robiline's Glenwood of Two Oaks* (18822)
Dam *Zaida's Pride of Lone Oak Farm* (33918)
Born—Oct. 3, 1913
Light fawn with white markings.
Breeder and owner:
William L. Burruss, Parma, Mich.

26887 **Imp. Roberts' Criterion of Bellview**
Imp as *France's Criterion* (R. G. A. S. 2917 P. S.)
Sire *Imp. Roberts' Boy* (21662)
Dam On Guernsey *France XXVIII.* (R. G. A. S. 8333 P. S.)
Born—April 10, 1911
Imp. to New York, Aug. 11, 1913, in S. S. Minnehaha, by F. B. Buckley, Schaghticoke, N. Y.
Fawn with white markings.
Breeder—E. T. P. Ozanne, Island of Guernsey.
Owner—F. B. Buckley, Schaghticoke, N. Y.

26888 **George's Beauty Boy of Crab Tree**
Sire *Imp. Royal George of the Isle* (20305)
Dam *Imp. Beauty of Alderney* (37492)
Born—May 25, 1913
This animal was registered as cow No. 45518 by mistake.
Light fawn with white markings.
Breeder and owner:
Mrs. Scott Durand, Lake Forest, Ill.

26889 **George's Cherry Boy of Crab Tree**
Sire *Imp. Royal George of the Isle* (20305)
Dam *Imp. Cherry of Alderney* (37498)
Born—July 14, 1913
Light fawn with white markings.
Breeder and owner:
Mrs. Scott Durand, Lake Forest, Ill.

26890 **Imp. Sequel's Qui Vive 2d**
Sire On Guernsey *Sequel's Qui Vive* (R. G. A. S. 2920 P. S.)
Dam *Imp. Golden Dimple of Ashburton* (47099)
Born—Sept. 19, 1913
Imp. in dam.
Fawn with white markings.
Breeder—William H. Foote, Island of Guernsey.
Owner—George W. Ott, Doylestown, Pa.

26891 **Gladys's Boy**
Sire *Masher's Lord Butterfield* (14659)
Dam *Gladys of Elm Tree Farm 2d* (29112)
Born—Feb. 12, 1913
Fawn with white markings.
Breeder and owner:
